RDM30/SRDM30 ALSO AVAILABLE IN:
1000 VDCW FROM 470–12,000 pF
1500 VDCW FROM 100–5,600 pF
2000 VDCW FROM 100–5,600 pF

1. All ratings are for 500 Vdcw except ① (100V) and ③ (300V).

* Complete the type number by inserting the desired tolerance code in the space marked "±". For the single dip style add the prefix "S" to RDM. For crimped lead RDM, add the prefix "2". For crimped lead MIL, change CM07 to CM12.

READ "HOW TO SPECIFY" BEFORE ORDERING

RDM42 (CM08/13)

The RDM42 is the largest MIL-C-5D dipped style (CM08/13). It offers ratings as high as 100,000 pF (.10uF) and operating voltages to 1500 Vdcw.

All (CM08/13) ratings appear in the tables below plus the extended range of the commercial RDM42. In addition to the RDM42 ratings shown, intermediate values may be specified and in tolerances as tight as ±0.5%.

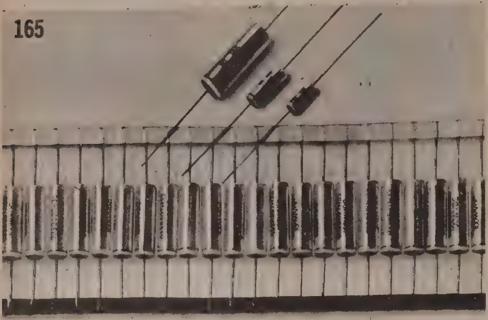
CRYSTAL-CAP® POLYESTER FILM (MYLAR*) CAPACITORS TYPE 165 AXIAL LEADS

SPECIFICATIONS



Construction: Extended dielectric of self-sealed polyester film with tinned axial terminal wires.

Operating Temperature: −55° C to +85° C at full rated working voltage. −55° C to +125° C permissible with voltage derating, (See Capacitance vs. Temperature chart below.)

Working Voltage: Expressed as Vdcw in tables. This is the maximum continuous voltage which may be applied at +85° C. For +125° C operation, see voltage derating chart below.

Surge Voltage: Expressed as Vdcs. Capacitors shall withstand a surge voltage of 250% of rated Vdcw for 15 seconds or 200% for 60 seconds.

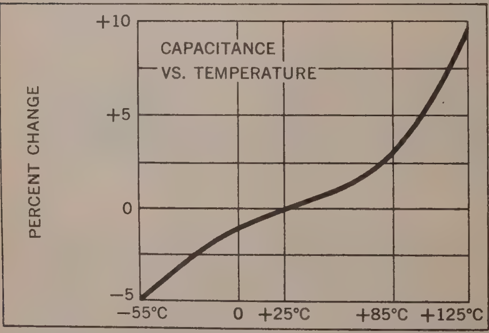
Capacitance: Shown in microfarads (uF) in the tables and measured by the bridge method at +25° C and 1000 Hertz.

Capacitance Tolerance: The standard tolerance is ± 10% of rated capacitance. ±20% and ±5% tolerance is also available.

Outer Foil: The outer foil is indicated by a printed bar adjacent to the associated terminal wire.

Insulation Resistance: Expressed as IR. Measure by applying rated Vdcw or 500 Vdc (whichever is lesser) for two minutes. IR shall be within the following limits:

Temp. °C	Megohm - uF's	Need not exceed (Megohms)
+25	50,000	100,000
+85	5,000	15,000
+105	1,000	2,000
+125	50	200



Dissipation Factor: Expressed as DF in terms of percent. When measured by the bridge method at ±25° C and 1000 Hertz, DF shall not exceed 1.0%.

Life Test: Test is conducted in a suitable chamber with circulating air. Apply 150% of rated Vdcw for 250 hours at +85°C. Remove capacitors from test chamber and allow to cool normally to ±25°C ±1°C. Measure capacitance, IR and dissipation factor: IR shall not be less than 75% of initial required values; capacitance shall be within ±10% of initial value; DF shall not exceed 1.0%. No more than one failure per lot of 24 is permitted.

Humidity Test: Test must be conducted in a suitable chamber with calibrated measuring equipment and circulating air. Capacitors shall withstand 90% (+5% —0%) relative humidity at +65°C ±2°C for 500 hours. At completion of exposure, wipe capacitors dry and let stand in circulating air for four hours at +25°C. At conclusion of drying cycle, measure insulation resistance (IR) at +25°C ±1°C. IR shall not be less than 75% of initial required value. No more than one failure per lot of 18 is permitted.

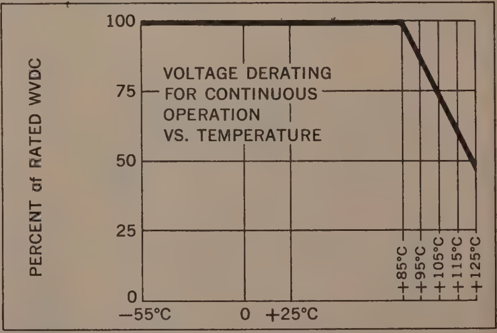
Terminal Bond Test: Clamp one terminal wire to a suitable support and attach 4.4 lb. weight to opposite wire with capacitor body in vertical position. Test shall be conducted for 10 seconds. No physical or electrical damage shall have occurred to capacitor.

Terminal Bend Test: Clamp capacitor securely in a suitable fixture with the body in a vertical position. Grasp the end of the upper terminal wire and bend it over a time period of 5 seconds to a position 90° to the right of the body. Return to original position over a period of 5 seconds. Bend the wire 90° to the left over a period of 5 seconds. Return to original position over a period of 5 seconds. Terminal wire shall remain intact. Axial pull on the wire shall not have exceeded 2.2 lbs. during this test.

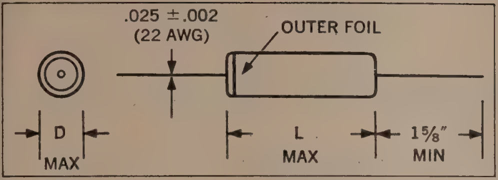
Marking: Minimum marking shall be: 1. General Instrument symbol and Type (165), 2. Outer foil bar, 3. Capacitance in uF, 4. Tolerance, and 5. Working voltage.

Customer part number or other marking may be applied on special order.

Packaging: Standard packaging is bulk in corrugated cartons. Reel packaging is available for Type 165 up to .375 inches maximum diameter. The standard G.I. reel packaging specification is available on request.



CRYSTAL-CAP® POLYESTER FILM (MYLAR*) CAPACITORS TYPE 165 AXIAL LEADS



General Instrument "Crystal-Cap" film capacitors are made with DuPont Mylar in a unique manner. The bodies are self-sealed with the terminal wires being inserted precisely on center under heat and pressure. This construction provides both an excellent electrical connection and a very strong mechanical bond. This bond is actually stronger than typical wrap and fill types and far less susceptible to damage from soldering activities either manual or automatic.

As with all Mylar capacitors, applications include bypass, timing, coupling and filtering. Operating temperatures range from −55°C to +85°C at full rated voltage. Operation to +125°C is common except that voltage must be de-rated 50%. A unit rated at 200 Vdcw may be operated continuously at that voltage at +85°C but must not be operated continuously above 100 Vdcw at +125°C.

The particular advantage of the Crystal-Cap capacitor in addition to its construction and performance is the concentricity of the terminal wires. This makes it ideal for automatic insertion equipment. Furthermore, the very simplicity of its design causes it to be smaller in size than other Mylar types (wrap and fill, molded, end-capped, etc.). Metallized Mylar capacitors are, of course, smaller but these specialized types cost considerably more and suffer distinct performance limitations.

The table below lists all standard Crystal-Cap capacitors from .001 to 1.0 uF and 50 to 600 Vdcw. Standard packaging is bulk. However, all sizes up to .375″ diameter and/or 1.031″ body length are available taped and reeled at modest extra cost.

NOTES:

HOW TO SPECIFY TYPE 165 CAPACITORS

1. Select working voltage and capacitance
2. Read the Type 165 part number
3. Insert at "*", *B* for bulk package or *T* for tape and reel
4. Add at "+", tolerance code letter:
   M = ±20%, K = ±10%, J = ±5%

Type	Configuration	Case Style	Cap. Range (MFDS)	Volt Range (VDC)	Size Range (Inches)
3		Plastic Wrap & Fill	.001 to 2.00	100 to 1000	.156 x .500 to 1.609 x 3.000
3F 3FR		Plastic Wrap & Fill	.001 to 2.00	100 to 600	.125 x .250 x .500 to .984 x 1.937 x 3.000
3X		Plastic Wrap & Fill	.010 to 5.00	up to 100	.117 x .406 to .840 x 1.812
3XF 3XFR		Plastic Wrap & Fill	.010 to 5.00	up to 100	.075 x .149 x .437 to .578 x .875 x 1.812
301 3XI		Plastic Wrap & Fill	.0001 to .33	up to 100	.140 x .500 to .500 x .500
E3F		Epoxy	.001 to 2.00	100 or 200	.160 x .240 x .420 to .560 x .720 x 1.950
E3FR		Epoxy	.0010 to 1.00	100 or 200	.095 x .265 x .375 to .295 x 1.100 x 1.785
E3XF E3XFR		Epoxy	.015 to 2.00 .0082 to 1.00	50	.170 x .290 x .550 to .550 x .720 x 1.250 .095 x .265 x .375 to .250 x .890 x .985
D3		Epoxy Dip	.001 to .68	100	.200 x .350 x .500 to .475 x .875 x 1.125
P3		Phenolic	.001 to 2.00	100 to 600	.250 x .625 to 1.00 x 2.0
H3G H3GS		Hermetic Seal	.001 to 2.0	100 to 600	.173 x .687 to 1.00 x 2.812
H3 H3S		Hermetic Seal	.001 to 2.00	100 to 600	.173 x .750 to 1.00 x 2.875

GENERAL NOTES

Capacitance Tolerance: Standard tolerance is ±5%. All types available in ±20%, ±10%, ±3%, ±2%, and ±1%. The capacitance shall be measured at 1000 Hz. at 25°C for values up to and including 5.0 mfd. Values larger than 5.0 mfd. shall be measured at 60 Hz. and 25°C.

Dissipation Factor: Less than 0.60% when measured at 1000 Hz. and 25°C for values up to and including 5.0 mfd. and 60 Hz. for values larger than 5.0 mfd. 60 Hz. and 25°C.

Insulation Resistance: Greater than 100,000 megohm-microfarads after a 2 minute electrification at rated voltage and 25°C, but the I.R. need not exceed 200,000 megohms.

Dielectric Strength: Twice rated voltage for 60 seconds at 25°C, thru a current limiting resistance of 100 ohms per volt.

Temperature Range: May be operated at rated voltage from −55°C to +85°C and +125°C with 50% derating.

POLYSTYRENE-FOIL

Type	Configuration	Case Style	Cap. Range (MFDS)	Volt Range (VDC)	Size Range (Inches)
4		Plastic Wrap & Fill	.001 to 1.000	100 to 600	.235 x .562 to 1.593 x 3.062
4F 4FR		Plastic Wrap & Fill	.001 to 1.000	100 to 600	.153 x .295 x .562 to .812 x 1.250 x 2.125
D4		Epoxy Dip	.0001 to .10	100	.350 x .500 x .560 to .600 x .750 x 1.100
H4 H4S		Hermetic Seal	.001 to 1.00	100	.193 x .750 to 1.00 x 2.125
H44A H44B		Hermetic Seal	.01 to 1.00	100	.312 x .875 to .750 x 2.375

GENERAL NOTES

Capacitance Tolerance: Standard tolerance is ±5%. Also available in ±20%, ±10%, ±3%, ±2%, and ±1%. The capacitance shall be measured at 1000 Hz. and 25°C.

Dissipation Factor: Less than 0.1% when measured at 1000 Hz. and 25°C.

Insulation Resistance: 500,000 megohm-microfarads after a 2 minute electrification period at rated voltage and 25°C. The I.R. need not exceed 500,000 megohms.

Dielectric Strength: 200% of rated voltage for 60 seconds at 25°C thru a current limiting resistance of 100 ohms per volt.

Life Test: 250 hours at 140% of rated voltage and 85°C.

Temperature Range: May be operated at rated voltage from −55°C to +85°C.

Temperature Coefficient: −120 parts per million per °C, ±20 PPM.

Dielectric Absorption: Will not exceed 0.1% when measured at 25°C.

Capacitance Tolerance: Standard tolerance is ±5%. Also available in ±20%, ±10%, ±3%, ±2%, and ±1%. The capacitance shall be measured at 1000 Hz. and 25°C.

Dissipation Factor: Less than .05% when measured as above.

Temperature Coefficient: H44A ≦ ±20 PPM/°C
H44B ≦ ±40 PPM/°C

Insulation Resistance: 1,000,000 megohm-microfarads following a 2 minute electrification at rated voltage and 25°C. I.R. need not exceed 1,000,000 megohms. 250,000 meg. mfd. at 85°C.

Dielectric Strength: Twice rated voltage for 60 seconds at 25°C through a current limiting resistance of 100 ohms per volt.

Temperature Range: May be operated at rated voltage from −55°C to +85°C.

Life Test: 250 hours at 140% of rated voltage and 85°C.

Humidity Resistance: Meet or exceed requirements of MIL-STD-202, Method 103B, Test Condition A.

Construction: Extended foil winding, polystyrene dielectric, hermetically sealed case.

POLYPROPYLENE-FOIL

Type	Configuration	Case Style	Cap. Range (MFDS)	Volt Range (VDC)	Size Range (Inches)
5		Plastic Wrap & Fill	.0001 to 1.000	160	.205 x .500 to .785 x 1.937
D5		Epoxy Dip	.0001 to .10	160	.300 x .450 x .500 to .475 x .625 x 1.025

Capacitance Tolerance: Standard tolerance is ±5%. Also available in ±20%, ±10%, ±3%, ±2%, and ±1%. The capacitance shall be measured at 1000 Hz. and 25°C.

Dissipation Factor: Less than 0.1% when measured at 1000 Hz. and 25°C.

Insulation Resistance: 300,000 megohm-microfarads after a 2 minute electrification period at rated voltage and 25°C. The I.R. need not exceed 300,000 megohms.

Dielectric Strength: 200% of rated voltage for 60 seconds at 25°C thru a current limiting resistance of 100 ohms per volt.

Life Test: 250 hours at 140% of rated voltage and 85°C.

Temperature Range: May be operated at rated voltage from −55°C to +85°C.

POLYCARBONATE-FOIL

Type	Configuration	Case Style	Cap. Range (MFDS)	Volt Range (VDC)	Size Range (Inches)
6		Plastic Wrap & Fill	.001 to 1.00	100	.155 x .500 to .995 x 1.937
6F 6FR		Plastic Wrap & Fill	.001 to 1.00	100	.095 x .175 x .500 to .785 x 1.185 x 1.937
E6F		Epoxy	.001 to 1.00	100	.160 x .240 x .420 to .560 x .720 x 1.950
H6 H6S		Hermetic Seal	.001 to 1.00	100	.193 x .562 to 1.00 x 2.00

GENERAL NOTES

Capacitance Tolerance: Standard tolerance is ±5%. Also available in ±20%, ±10%, ±4%, ±3%, ±2%, and ±1%. The Capacitance shall be measured at 1000 Hz. and 25°C.

Dissipation Factor: Less than 0.20% when measured at 1000 Hz. and 25°C.

Insulation Resistance: Greater than 200,000 megohm-mfds. following a 2 minute electrification period at rated voltage or 500 VDC; whichever is less; and 25°C. I.R. need not exceed 500,000 megohms.

Dielectric Strength: Twice rated voltage for 60 seconds at 25°C, thru current limiting resistance of 100 ohms per volt.

Dielectric Absorption: Shall not exceed 0.5% (Ref. MIL-C-19978B).

Life Test: 250 hours at 140% of rated voltage and +125°C.

Temperature Range: May be operated at rated voltage from −55°C to +125°C.

METALIZED MYLAR

Type	Configuration	Case Style	Cap. Range (MFDS)	Volt Range (VDC)	Size Range (Inches)
7		Plastic Wrap & Fill	.0047 to 10.00	200 to 600	.125 x .437 to 1.187 x 2.250
7F 7FR		Plastic Wrap & Fill	.0047 to 12.00	200 to 600	.125 x .187 x .437 to 1.218 x 1.750 x 2.00
7T		Plastic Wrap & Fill	.01 to 20.0	100	.125 x .437 to 1.062 x 2.500
7TF 7TFR		Plastic Wrap & Fill	.01 to 20.0	100	.093 x .156 x .437 to .750 x 1.187 x 2.500
7X 7XF 7XFR		Plastic Wrap & Fill	.10 to 22.00	100	.218 x .468 to .875 x 1.750 .140 x .218 x .468 to .733 x 1.062 x 1.750
E7F		Epoxy	.005 to 6.00	200 to 600	.160 x .240 x .420 to .560 x .720 x 1.950
H7 H7S		Hermetic Seal	.0047 to 10.00	200	.173 x .625 to 1.00 x 2.250

Capacitance Tolerance: Standard tolerance is ±5%. Also available in ±20%, ±10%, ±3%, ±2%, and ±1%. The capacitance shall be measured at 1000 Hz. and 25°C for values up to and including 5.0 mfd. Larger values shall be measured at 60 Hz. and 25°C.

Dissipation Factor: Less than 1.0% when measured as specified above.

Dielectric Strength: Twice rated voltage for 60 seconds at 25°C; thru a current limiting resistance of 100 ohms per volt.

Insulation Resistance: 30,000 megohm-microfarads following a 2 minute electrification period at rated voltage and 25°C. I.R. need not exceed 30,000 megohms.

Life Test: 500 hours at 140% of rated voltage and 85°C.

Humidity Resistance: Meets or exceeds requirement of MIL-STD-202, Method 103B, Test Condition A.

Temperature Range: May be operated at rated voltage from −55°C to +85°C and to +125°C with 50% derating.

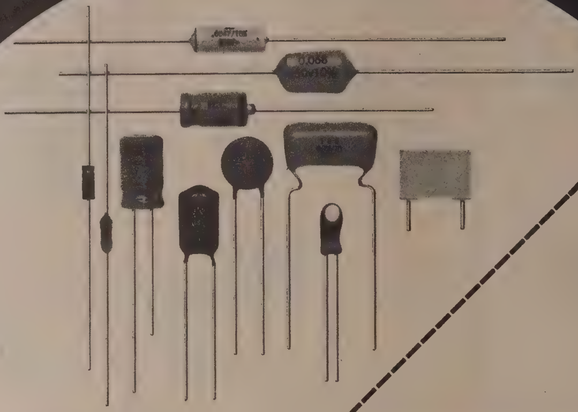
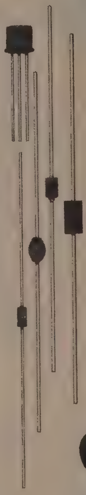
For Passive Components, Semiconductors and Tubes, we're the head of the class.



PASSIVE COMPONENTS

- **Capacitors**—aluminum electrolytics, non-polarized electrolytics, polyester and metalized polyester film, dipped tantalum, ceramic disc
- **Resistors**—carbon film and carbon composition



SEMICONDUCTORS

- Rectifier diodes
- Switching diodes
- Zener diodes
- Epoxy cased signal transistors

TUBES

- Receiving and special purpose
- Over 2,000 types
- Domestic and foreign
- Consumer and industrial
- Classic and antique, too.

El-Menco

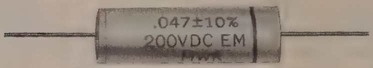
The world's leading manufacturer of mica capacitors

Fast Delivery

of El-Menco®

Mass Produced, High Reliability, Close Tolerance "P" Level CMRO Dipped Mica Capacitors

Expanded plant and production facilities enable rapid delivery of established reliability CMRO capacitors, in quantity, per military specification MIL-C-39001, to a failure rate "P" level—0.1% per 1,000 hours at a 90% confidence level—no more than one failure per 1,000,000 unit-hours of operation! El-Menco also offers the world's largest range of standard Dipped Mica (DM) and Molded Mica (MM) capacitors: in dipped from 1 pF to 159,000 pF, in molded from 1 pF to 20,000 pF, both in a variety of voltages and tolerances from ±0.5 pF to ±10%.



Film Capacitors

Production quantity requirements of our Mylar* film capacitors, MDEF and MDE series, and of our Mylar wrapped and filled capacitors, MWR series, are available. Also, other styles and dielectrics, such as polypropylene, metallized mylar, molded mylar, and ceramic encased film capacitors.

*TM DuPont Corp.

Electrolytics

Off-the-shelf delivery is now provided of our TAD axial, PCD radial, and non-polarized miniature aluminum electrolytic series. These have welded construction and insulated aluminum cans. Unique end seal provides proper venting while effectively resisting humidity and cleaning agents.

Electro Motive CORPORATION

Melville, New York | Florence, South Carolina

CAPACITORS

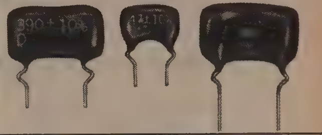
Mica

DIPPED MICA

DM Series — Fabricated from the finest India Ruby Muscovite mica which exhibits the best characteristics obtainable. The result is optimum high temperature characteristics and excellent stability. Qualified to Mil-C-39001.

Capacitance Range: 1 pF — 159,000 pF

Operating Voltage: 50, 100, 500 V.D.C. Higher voltages available.

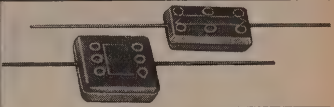


MOLDED MICA

MM Series — Molded with mineral filled epoxy compound, encapsulating the finest mica available. Qualified to Mil-C-5.

Capacitance Range: 1 pF — 20,000 pF

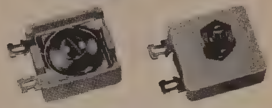
Operating Voltage: 100, 300, 500 V.D.C. Higher voltages available.



VARIABLE MICA TRIMMERS

Variable Compression type made of stacked mica dielectric between nonferrous metal conducting plates mounted on a ceramic base. Any desired capacitance within the physical limitations of the ceramic base is available.

Operating Voltage: 175 and 250 V.D.C.



Film

MYLAR* FILM

MDEF, MDE Series — Non-inductively wound Mylar dielectric, dipped in a special formulated epoxy material.

Capacitance Range: .001 MFD — 1.0 MFD

Operating Voltage: 100 and 200 V.D.C.

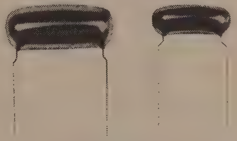
.068±10%
200WV EM
.033±10%
200WV EM

POLYPROPYLENE

PPD Series—Radial leads, polypropylene film dielectric, extended foil construction and epoxy resin encased. These units show their greatest advantage when peak currents and several amperes are encountered and where corona resistance and low dissipation factor are a design criterion.

Capacitance Range: .001 MFD — .47 MFD

Operating Voltage: 200, 400, 600, 800, 1000, 1600 V.D.C.



MYLAR* WRAP

MWR Series — axial lead extended foil Mylar dielectric. Mylar wrap with end fill of epoxy.

Capacitance Range: .001 MFD — 1.5 MFD

Operating Voltage: 100 and 200 V.D.C.

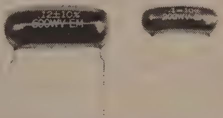
MYLAR* PAPER

MPD Series — Dipped in phenolic resin and vacuum impregnated which make this type completely solid and, therefore, will not drip under any operating temperature.

Capacitance Range: .001 MFD — .5 MFD

Operating Voltage: 200, 400, 600, 1000, 1600 V.D.C.

*TM DuPont Corp.



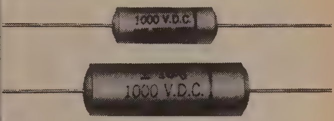
CERAMIC TUBE

PCE paper ceramic, MPCE Mylar-paper ceramic Series — Non-inductively wound, vacuum impregnated in mineral oil. Enclosed in an impervious steatite ceramic tube sealed with epoxy and fill.

Capacitance Range: .001 MFD — .5 MFD

Operating Voltage: ***PCE*** *200, 400, 600, 1000 V.D.C.*

MPCE *1000, 1600, 2000 V.D.C.*



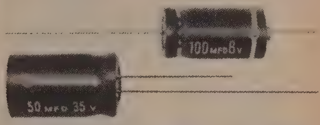
Electrolytic

MINIATURE ALUMINUM ELECTROLYTIC

TAD axial, PCD radial Series — Welded construction, in PVC insulated aluminum cans. Unique end seal provides proper venting while effectively resisting humidity and cleaning agents.

Capacitance Range: .47 MFD — 2200 MFD

Operating Voltage: 6 Volts D.C. — 50 Volts D.C.

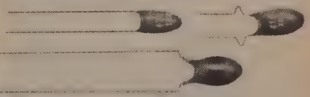


DIPPED SOLID TANTALUM

DIT Series — Radial lead epoxy dipped miniature capacitors for printed circuit applications.

Capacitance Range: .1 MFD — 470 MFD

Operating Voltage: 3 Volts D.C. — 35 Volts D.C.



For further information or samples for evaluation, contact the El-Menco representative in your territory or Electro Motive in Melville.

ELECTRO MOTIVE CORPORATION

REGISTERED
TRADE MARK

1924·1974

Over 50 years... Nothing succeeds like success.

In 1924, we employed six people. Then, wireless was a novelty. We were selling condensers as piece parts to home radio builders. We've diversified a lot and have become an international name, synonymous with quality components for the communications industry.

Jackson components are tried and tested to give perfect reliability over a long life. And you can have components custom made to suit your individual requirements.

Add to this our skilled personnel and up-to-the-minute equipment and you can understand why our 50 years experience is your guarantee of a reliable product.

We have been exporting our components to America for the past 20 years. All in all, those 20 years have been good ones and we've no reason to expect the next 20 won't be better.

That's success for you.

New Products include:–

A range of Capacitive Angular and Linear Displacement Transducers.

●

A ceramic dielectric Trimmer less than 3mm. thick.

●

An air dielectric non-rotating piston trimmer specially designed for microwave applications.

TUNING CONTROLS

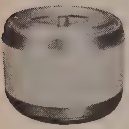
vacuum capacitors

INTRODUCTION: ITT Jennings offers the broadest available line of high voltage capacitors for radio frequency applications. Units are available in glass and ceramic envelopes with working voltage ratings of 2 kv to 40 kv, at capacitance values to 5000pfd, with current ranges of 250 amps air cooled and 750 amps rms water cooled at 16 mhz.

ADVANTAGES: The use of a vacuum dielectric allows a unit design with a number of electrical, mechanical, and environmental advantages which include the following:

1. *High Voltage*—The high dielectric strength allows maximum voltage levels of any capacitor for a given capacity rating.
2. *High Current*—Due to low losses and heavy copper construction, vacuum capacitors carry high rf currents.
3. *Compact Design*—Units are small for their power handling capabilities due to the high breakdown voltage of the vacuum dielectric.
4. *High Maximum to Minimum Capacity Ratio*—Capacity change ratios are available to 150:1, making them desirable for wide tuning ranges.
5. *Low Losses*—Extremely low losses occur because of the dielectric, the low loss glass and ceramic envelopes, and the copper and silver solder construction. Therefore, units are able to handle large currents at high rf frequencies that would destroy capacitors with other dielectrics.
6. *Self Healing*—The vacuum dielectric permits moderate overloads that would damage other materials.
7. *High Altitude Operation*—Vacuum capacitors are free from internal degradation from extreme environmental conditions.

vacuum fixed capacitors



RF WORKING KV	TYPE		CAPACITY	PEAK VOLTAGE KILOVOLTS		CONTINUOUS RMS AMPERES² (16 MHz)	NOMINAL DIMENSIONS (Inches)

[1] RF working voltage is the maximum RF voltage that can be applied to the capacitor over the 2-32 MHz frequency range, provided the RF current rating is not exceeded.

[2] RF current rating is dependent upon capacity and frequency. Write for complete applications data.

APPLICATIONS: Because of the high power handling capability of vacuum capacitors, their application is broad in the field of communications where space is critical or where high voltage must be safely handled with maximum reliability.

Specific uses for the Jennings capacitor would include tunable or fixed elements in transmitter tank circuits, in impedance matching networks for antenna couplers, in high power filters for multi-coupling and harmonic reduction, and in various voltage dividing networks.

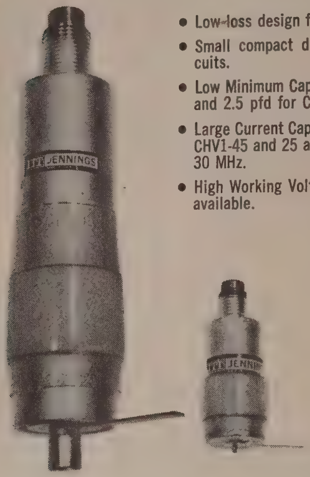
gas capacitors

CHV SERIES • VHF CAPACITORS



- Low-loss design for use in high Q circuits.
- Small compact design suitable for VHF circuits.
- Low Minimum Capacity—1.5 pfd for CHV1-45 and 2.5 pfd for CHV2-50.
- Large Current Capacity—15 amperes RMS for CHV1-45 and 25 amperes RMS for CHV2-50 at 30 MHz.
- High Working Voltage—3 KV and 9 KV units available.

ITT Jennings CHV series variable capacitors give a new measure of capability to the designer of VHF circuits. Their unique gas dielectric provides a sealed low loss unit that can be used to construct compact circuits of extremely high "Q". "Q's" higher than 5000 have been achieved in circuits designed for use in the 30-80 MHz frequency range. Typical applications include VHF transmitter, antennas, antenna couplers and transmitting multicouplers. In the latter application the high circuit "Q" allows closer frequency spacing of the transmitters operating into the multicoupler. In addition, the high voltage and current capability of these capacitors will easily handle the circulating currents and resonant voltages encountered in a high "Q" design.

Specifications	CHV1-45-005	CHV2-50-0015
Peak Test Voltage (60 Hz)	5 KV	15 KV
Maximum Capacitance	45.0 pfd	50 pfd
Minimum Capacitance	1.5 pfd	2.5 pfd
RF Working Voltage	3 KV peak	9 KV peak
RF Current Rating at 30 MHz	15 amp RMS	25 amp RMS
Push Force (at 25°C)	20 lbs.	25 lbs.
Operating Temperature	−55° to +125°C	

CGF SERIES DC BLOCKER CAPACITORS

- Low (less than 1 microampere) and stable DC leakage current.
- High RF current rating.
- Rugged Construction.
- Compact size.

The CGF Series of fixed capacitors utilize the latest techniques in capacitor design to provide a DC blocker of highest performance. Units are silver brazed and use a gas dielectric to achieve a low and stable DC leakage current. Internal construction maximizes heat flow from capacitor plates to mounting rings for high RF current capability.

The CGF Series is available with working voltages of from 6 to 18 KV DC or Peak RF in two sizes, one with 6, 9 and 12 KV ratings, the other with 15 and 18 KV ratings. Peak test voltages (60 Hz) range from 10 to 30 KV.

The units are specifically designed for DC blocker applications in high power RF amplifiers where the capacitor must handle both DC and RF voltages. In these applications the sum of the DC plus the Peak RF voltage should not exceed the rated working voltage.

The units are of rugged ceramic and metal construction and exceed the shock and vibration requirements specified in MIL-C-23183. They are cooled by natural connection and are suitable for mounting in any position.

Sub-Miniature Ceramic Disc Trimmers

100 SERIES. This sub-miniature ceramic disc trimmer exhibits extreme environmental stability and long life due to the encapsulation of the rotor plate in titanate. Diameter is .218″ on PC Mount Vertical tuning and Horizontal tuning. Leadless Vertical tuning diameter is .212″ except for terminal portion on which center line dimension is .232″. The stator is high alumina for lower loss and higher strength—a necessity for extreme environmental conditions. Smooth linear tuning is realized by precision lapping of bearing surfaces. Designed to meet or exceed performance criteria of MIL-C-81B. Operating range is —55° to 125° C. NPO temperature characteristics, Type A. Working voltage 100 VDC up to 85°C, 50 VDC up to 125° C. Peak withstanding voltage is greater than twice the working voltage.

This 5mm size ceramic trimmer is designed to preclude metal particle migration by utilizing tin plating of the stator plate rather than silver, and providing polarity orientation by means of terminal size.

Titinate rotor is precision lapped to minimize capacitance aging.

Q is 500 minimum at 1 MHz. Working voltage is 50 VDC up to +85°C. Temperature range, —30°C to +85°C.

Dielectric strength 150 VDC for 5 seconds. Insulation resistance 10,000 megohms at 50 VDC. Starting and running torque .415 to 2.08 oz.-in. (30 to 150 gram-centimeters).

Miniature Teflon® dielectric trimmer capacitors

These trimming capacitors are ideally suited for VHF and UHF applications requiring low minimum capacity and delta C. They provide high resolution and electrical stability. Tuning is linear. Q is high (2000 @ 150 MHz typically). Insulation resistance 10^6 megohms. Temperature range —55° to +150°C. High resistance to shock and vibration.

Metal parts are gold plated. Insulation is Teflon®.

® Teflon is a registered trade name of Du Pont Co.

Air Variable Capacitors

Johnson sub-miniature air variable capacitors are available in a variety of sizes, mounting configurations and section types. Rotors and stators are precision machined from one piece of solid brass for outstanding stability, uniformity and freedom from moisture entrapment. They offer high "Q" . . . typically 2000 @ 150 MH$_2$ and exceptionally low temperature coefficient: Type T plus 30± 15 ppm/°C; Type U plus 45± 15 ppm/°C. Metal parts are silver-plated. Types U and V ceramic are steatite grade L-423 or better. Type T ceramic is 95% Alumina grade L-624 or better.

Type "T" Air Variable Capacitors

Designed to meet or exceed E1A-RS 2-4 and MIL-STD.202C methods 204 A and 201 A. Offer excellent retrace characteristics. Can be supplied with tuning slot on both ends of rotor. High temperature versions available as specials.

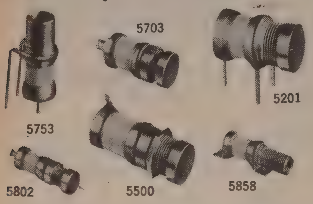
Johanson VARIABLE CAPACITORS

HIGH Q AIR CAPACITORS



Air capacitors are beautiful for microwave, VHF, and UHF applications. They offer fine tuning, ultra high Q, low temperature coefficients and sizes for hybridcircuit as well as standard applications. Models 5200 (PC25) and 5201 (PC26) are QPL approved to MIL Spec 14409C.

Part No.	Length	Dia.	Capacitance Range — pf	Q @ 100 MHz
5200	.48	.28	0.8 to 10.0	>5000
5500*	.75	.28	1.0 to 20.0	>1500
5700	.48	.22	0.4 to 6.0	>10,000
5750	.51	.22	0.8 to 10.0	>7500
5800	.48	.15	0.35 to 3.5	>10,000

CERAMIC TRIMMER CAPACITORS

9350-9354
9330-9335
9306-9311

Ceramic trimmer capacitors are designed for broadband applications from audio to 200 MHz, where a negative temperature characteristic and ease of adjustment is important. Typical applications include crystal filters, crystal oscillators, CATV amplifiers, and communications and test equipment. Models are available for top tuning (illustrated), side tuning (illustrated) and bottom tuning.

Part No.	Part No.	Capacitance Range PF	Temperature Coefficient (PPM/°C)	Q @ 10 MHz
9306	9330	1.7 to 6.0	NPO ±250	>500
9307	9331	1.7 to 10.0	NPO ±250	>500

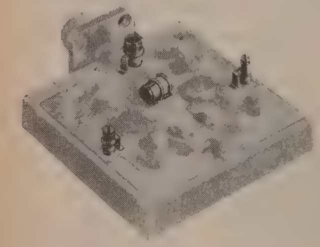
9310	9334	4.0 to 40.0	−1400 ±800	>200
9311	9335	4.5 to 50.0	−1400 ±800	>200

Part No.	Capacitance pf	Temperature Coefficient ppm/°C	Min. Q @ 100 MHz
9350	1.0 to 3.0	50 ±50	>500
9351	2.0 to 5.0	NPO ±200	>500
9352	3.0 to 10.0	N600 ±300	>300
9353	3.5 to 18.0	N800 ±300	>100
9354	5.0 to 25.0	N1400 ±500	>100

GIGA-TRIM® CAPACITORS



Giga-Trim (gigahertz-trimmers) are tiny variable capacitors which provide a beautifully straightforward technique to fine tune RF hybrid circuits and MIC's into proper behavior. They replace time consuming cut-and-try adjustment techniques and trimming by interchange of fixed capacitors.

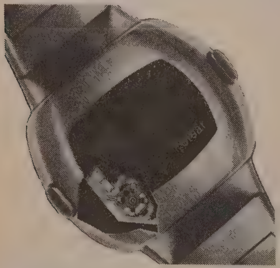
THIN-TRIM® CAPACITORS



Thin-Trim capacitors are a new development in tiny variable capacitors for demanding applications from quartz crystal watches to phased array MIC's. They provide the hybrid and microwave design engineer a reliable means of adjusting capacitance rather than abrasive trimming of fixed capacitors.

CERAMIC CHIP CAPACITORS

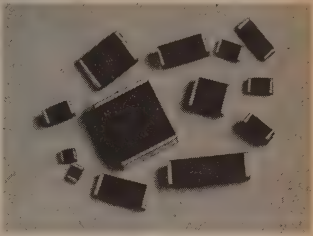
Johanson
Monolithic Dielectrics

STANDARD CHIP CAPACITORS

Maximum Capacitance Available in Popular Sizes

JMDI Size	Dielectric	12 VDCW	25 VDCW	50 VDCW	100 VDCW	200 VDCW
R11 (.050 x .040 x .040T)	COG		560pf	560pf	560pf	470pf
	X7R		.012mfd	.01mfd	3300pf	1500pf
	Y5V	.056mfd				
R15 (.080 x .050 x .050T)	COG		1500pf	1500pf	1500pf	1200pf
	X7R		.039mfd	.027mfd	.013mfd	5600pf
	Y5V	.150mfd				
R29 (.180 x .080 x .065T)	COG		.012mfd	.012mfd	.012mfd	8200pf
	X7R		.270mfd	.180mfd	.120mfd	.047mfd
	Y5V	1.20mfd				
S41 (.125 x .095 x .065T)	COG		.01mfd	.01mfd	.01mfd	8200pf
	X7R		.22mfd	.15mfd	.082mfd	.039mfd
	Y5V	1.5mfd				

Fourteen configurations are available in four basic dielectrics; NPO/COG, BX/X7R, Z5U, and Y5V characteristics, to meet MIL-C-55681A and EIA 198B specifications. Capacitors feature high volume efficiency of capacitance, and are ideal for hybrid circuit applications.

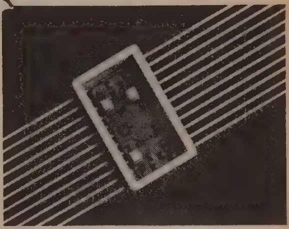


ULTRA HIGH CAPACITANCE CHIP CAPACITORS

Maximum Capacitance Available in Popular Sizes

JMDI Size	Dielectric	6 VDCW	12 VDCW
R11 (.050 x .040 x .040T)	Y5V	.068mfd	.056mfd
R15 (.080 x .050 x .050T)	Y5V	.180mfd	.150mfd
S41 (.125 x .095 x .065T)	Y5V	1.80mfd	1.50mfd
S48 (.225 x .250 x .080T)	Y5V	5.60mfd	4.70mfd
L76 (.585 x .298 x .070T)	Y5V	12.0mfd	10.0mfd

Chips feature very high volume efficiency of capacitance, attainable through unique processing techniques and Y5V (K12000) dielectric. Values exceeding 10mfd available, depending on chip configuration. Ideal in circuits where space is a premium or as replacement of tantalum chips.



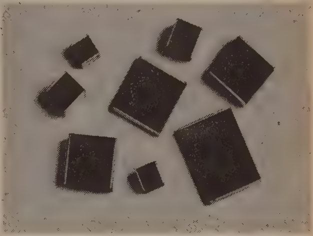
HIGH VOLTAGE CHIP CAPACITORS

Maximum Capacitance Available with Voltage Applied

JMDI Size	1000 VDCW	2000 VDCW	3000 VDCW	4000 VDCW
HV42	6800pf	1800pf	6800pf	330pf
HV46	.015mfd	3900pf	1500pf	680pf
HV50	.033mfd	8200pf	3300pf	1500pf
HV60	.056mfd	.015mfd	4700pf	2200pf
HV65	.082mfd	.022mfd	8200pf	4700pf

Part No.	Dimensions (L x W x T)		
HV42	.15	.15	.12
HV46	.19	.19	.12
HV50	.33	.33	.12
HV60	.40	.40	.12
HV65	.54	.40	.12

Available in either NPO/COG or BX/X7R dielectric, these units are designed to obtain high capacitance values to 4000 VDCW. Typical applications include high voltage power supplies and meter multiplier circuits. Built to suit specific customer requirements.



HIGH Q MICROWAVE CHIP CAPACITORS

JMDI Size	Dielectric	Max. Capacitance Available
R9 (.040 x .030 x .030T)	Hi-Q	18pf
R12 (.055 x .055 x .055T)	Hi-Q	100pf
R15 (.080 x .050 x .050T)	Hi-Q	270pf
S42 (.110 x .110 x .100T)	Hi-Q	1000pf

General Specifications:

Q @ 1 MHz > 10,000 (DF < .0001)

Q @ 100 MHz $> \frac{20000}{\text{Capacitance (pf)}}$

T.C. +90 ±20 ppm/°C

Temp. Range −55°C to 125°C

VDCW up to 250V, (500 VDC test)

High-Q microwave chip capacitors are available in four basic sizes, displaying excellent performance in the VHF, UHF and microwave ranges. The configurations, insertion loss, and resonance-free performance make these chips ideal for microstrip and hybrid MIC applications. Available with standard termination or with easy to mount coplanar leads.

DRY ELECTROLYTIC AC CAPACITORS

NEW
SMALLER
SIZE*

FOR MOTOR STARTING AND OTHER INTERMITTENT SERVICE

Mallory Type "P" Capacitors described here are designated "Motor Starting Types." These low cost, compact units are the result of more than 36 years experience in manufacturing electrolytic capacitors. They are not designed for continuous duty on AC, but are ideal in intermittent applications within their voltage, temperature, and duty cycle capabilities.

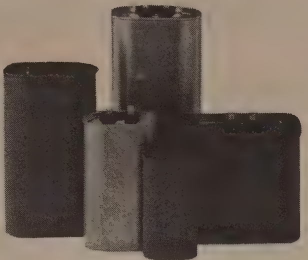
TYPE AC-OIL PAPER DIELECTRIC CAPACITORS

Mallory paper dielectric capacitors are useful in a variety of applications where continuous operation of this device is required on the normal AC power available in home and in industry. Refrigeration equipment, air conditioners, computers, and other business machines are representative of some of the products which employ these capacitors for efficient operation. Also they are utilized frequently in industrial controls, phase shifting and other heavy duty services.

These capacitors offer assurance of consistent performance in the applications listed. This level of reliability is the result of refinements attained throughout many years of manufacturing paper dielectric capacitors.

These capacitors contain polychlorinated biphenyls (PCB), which some studies have shown may be an environmental contaminant. These capacitors are also available with NON-PCB for application in areas which require biodegradable oil.



USES

- AIR CONDITIONING
- BUSINESS MACHINES
- POWER SUPPLIES
- REFRIGERATION
- INDUSTRIAL CONTROL
- PHASE SHIFTING
- FAN MOTORS
- LIGHTING

POLYESTER FILM CAPACITORS

POLYESTER FILM CAPACITORS
EXTENDED FOIL/FILM WRAP/EPOXY END FILL
STYLE 107 −55°C TO +125°C

ELECTRICAL AND ENVIRONMENTAL CHARACTERISTICS

CAPACITANCE MEASUREMENTS

Capacitors of 1.0 µF or less shall be measured at a frequency of 1000 Hz. Capacitors greater than 1.0 µF shall be measured at 60 Hz. The standard capacitance tolerance is 20%. Other tolerances are available upon request.

Reference: MIL-STD-202, Method 305.

TEMPERATURE CHARACTERISTICS

The maximum change in capacitance from the measured value at +25°C shall be −6% at −55°C, and +15% at +125°C.

DISSIPATION FACTOR

When measured as specified in Paragraph 1, the dissipation factor at +25°C shall not exceed 0.6% for values up to 1.0 µF and shall not exceed 1.0% for greater capacitance values.

INSULATION RESISTANCE

When measured at +25°C, and rated voltage (or 500 VDC, whichever is less), the insulation resistance shall be a minimum of 50,000 megohm-microfarads, but need not exceed 100,000 megohms. The period of electrification shall not exceed two minutes.

Reference: MIL-STD-202, Method 302.

VOLTAGE DERATING

The capacitors may be operated at full rated voltage from −55°C to +85°C, or with linear derating to 50% of rated voltage above +85°C with a maximum temperature of +125°C.

VOLTAGE TEST

When tested at +25°C, the capacitors shall withstand the indicated DC test voltages for a period of one minute:

Terminal to terminal	200% of DC rating
Terminal to case (less than .235 diameter)	200% of DC rating
Terminal to case (greater than .235 diameter)	400% of DC rating or 2,000 VDC, whichever is less

Reference: MIL-STD-202, Method 301.

LIFE TESTING

When tested for 1000 hours at 150% of the appropriate rated voltage for the test temperature, the capacitors shall exhibit no more than one failure in twelve pieces tested. Alternatively, an accelerated +125°C test may be performed at the +85°C voltage rating for a period of 250 hours. A failure is defined as:

a) A capacitance change of more than 10% of its initial value;
b) A dissipation factor greater than that specified in Paragraph 3;
c) An insulation resistance less than ⅓ that specified in Paragraph 4; or
d) A permanent open or short.

VIBRATION

The capacitors will meet or exceed in the vibration requirements of MIL-STD-202, Method 201.

POLYSTYRENE CAPACITORS

POLYSTYRENE CAPACITORS

EXTENDED FOIL
FILM WRAP/EPOXY END-FILL
STYLE 133
−55°C TO +85°C

ELECTRICAL AND ENVIRONMENTAL CHARACTERISTICS

CAPACITANCE MEASUREMENTS

Capacitors of 1.0 µF or less shall be measured at a frequency of 1000 Hz.

Capacitors greater than 1.0 µF shall be measured at 60 Hz.

The standard capacitance tolerance is 20%. Other tolerances are available upon request.

Reference: MIL-STD-202. Method 305.

TEMPERATURE CHARACTERISTICS AND STABILITY

When measured over the full operating range, the Temperature Coefficient shall be −120ppm/°C ±30ppm/°C.

There shall be less than 0.1% change per year in capacitance when operated between +20°C and +50°C.

After cycling from −55°C to +75°C, the capacitance shall not vary more than 0.2% from its initial measurement at +25°C.

DISSIPATION FACTOR

When measured as specified in Paragraph 1, the dissipation factor at +25°C shall not exceed 0.1%.

INSULATION RESISTANCE

When measured at +25°C, and rated voltage (or 500 VDC, whichever is less), the insulation resistance shall be a minimum of 200,000 megohm-microfarads, but need not exceed 500,000 megohms. The period of electrification shall not exceed two minutes.

Reference: MIL-STD-202, Method 302.

VOLTAGE DERATING

The capacitors may be operated at full rated voltage from −55°C to +65°C, or with linear derating to 60% of rated voltage above +65°C to the maximum operating temperature of +85°C.

VOLTAGE TEST

When tested at +25°C, the capacitors shall withstand the indicated DC test voltages for a period of one minute:

Terminal to terminal	200% of DC rating
Terminal to case (less than .235 diameter)	200% of DC rating
Terminal to case (greater than .235 diameter)	400% of DC rating or 2.000 VDC, whichever is less

Reference: MIL-STD-202, Method 301.

LIFE TESTING

When tested at 85°C for 250 hours at full 65°C rated voltage, the capacitors shall exhibit no more than one failure in twelve pieces tested. A failure is defined as:

a) A capacitance change of more than 6% of its initial value;
b) A dissipation factor greater than that specified in Paragraph 3;
c) An insulation resistance less than 60% that specified in Paragraph 4; or
d) A permanent open or short.

VIBRATION

The capacitors will meet or exceed the vibration requirements of MIL-STD-202, Method 201.

CERAMIC TUBE CAPACITORS/ TYPE CT

PAPER DIELECTRIC-OIL IMPREGNATED U.L. APPROVED FOR "ACROSS-THE-LINE" USE

GENERAL

Type CT are mineral oil impregnated, paper and foil capacitors, non-inductively wound. The case is of steatite ceramic with epoxy resin endfill.

ELECTRICAL SPECIFICATION

Temperature Range: −40°C to +85°C with full rated voltage applied.

Dielectric Strength at 25°C.: The capacitors will withstand the following test voltage for 5 seconds when applied thru a current limiting resistor of not less than 20 OHMS per volt.

600 VDC and less: 250% of rated voltage.

Greater than 600 VDC: 200% of rated voltage.

Dissipation Factor: The dissipation factor shall not exceed 1.% when measured at +25°C. Units shall be measured at 1000 CPS for capacitance of 1. MFD and less, and 60 CPS for capacitance greater than 1. MFD.

Insulation Resistance:

Temperature	Megohms MFD	Megohms Need Not Exceed
25°C	2000	10,000
85°C	20	250

Humidity Test: The capacitor shall withstand continuous exposure at a relative humidity of 95% at a temperature of 40°C. for 250 hours. At the conclusion of the test, after drying in circulating air at room temperature for four hours, the insulation resistance shall not be less than one-third of the value shown in the specifications above.

Life Test: The capacitor shall withstand 150% of rated voltage at 85°C for 250 hours. Not more than one failure in twelve allowed. After life test, the insulation resistance shall not be less than one half of the initial requirements. Power factor shall not exceed 1.5% and the dielectric strength shall be the same as the initial requirements. All measurements at 25°C.

Underwriters' Laboratory Testing: Those capacitors rated .001 to .22 MFD and 400 or 600 WVDC shall meet or exceed the requirements of UL Subject 492 pertaining to antenna coupling, line by-pass and across-the-line components including the "UL Flame Test", "Across-The-Line Discharge Test" and "Expulsion Test". (See Nytronics Yellow Card Approval #E46325, dated 6 March, 1970.

NYTRONICS CATALOG NUMBERING SYSTEM

CT — Nytronics Type

2 — Rated Voltage In Hundreds
2 = 200 VDC
4 = 400 VDC
6 = 600 VDC
10 = 1000 VDC
16 = 1600 VDC

P — Capacitance
D = .001 to .0099 μF
S = .01 to .099 μF
P = .1 to .99 μF
No Letter = 1 μF or greater

22 — Capacitance Significant Figures

Example — A Type CT Capacitor rated .22 μF, 200 WVDC is described by CT2-P22
A Type CT Capacitor rated .022 μF, 400 WVDC is described by CT4-S22

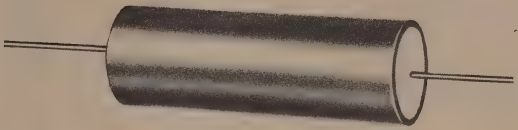
TUBULAR CAPACITORS

HIGH VOLTAGE TUBULAR CAPACITORS DUAL DIELECTRIC/OIL IMPREGNATED PHENOLIC CASED/EPOXY END FILL/TYPE 161



TYPE 161

RECOMMENDED APPLICATIONS

Nytronics Type 161 Capacitors are well-suited for use in Oscilloscopes, Electronic Air Cleaners, Power Supplies of industrial devices, and related equipment. The design of these capacitors employs a Paper/Polyester Film Section, oil impregnated, incased in a phenolic tube designed specifically for high voltage application. A unique epoxy endfill process precludes oil seepage which occasionally occurs in similar designs.

TYPICAL RATINGS

CAP/MFD	3000 VDC	5000 VDC	8000 VDC	10,000 VDC
.005	½ x 1½	9⁄16 x 1⅞	¾ x 2	¾ x 2½
.01	9⁄16 x 1⅞	¾ x 1⅞	¾ x 2¼	⅞ x 2½
.05	¾ x 21⁄16	1 x 2½	1 x 4¼	1½ x 3⅛

NOTE: Other Ratings can be designed to your specifications.

OPERATING TEMPERATURE

−55°C to +85°C at full rated voltage.

DISSIPATION FACTOR

Will not exceed 1% at 25°C.

MEASUREMENTS

Capacitance up to 1 microfarad are measured at a frequency of 1000 cycles per second and capacitances over 1 microfarad at 60 cps.

DIELECTRIC STRENGTH TEST

Units will withstand a potential of 150% of rated voltage applied for one minute at 25°C.

STANDARD TOLERANCE

±20%. Other tolerances available on request.

STANDARD MARKING

Nytronics, Part No., Capacitance, Voltage, and Date Code.

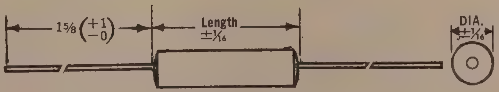
INSULATION RESISTANCE

When measured at the applicable test temperature with an electrification time of two minutes at 500 volts shall be equal to or greater than the values listed below:

Test Temperature	25°C	85°C
Megohms X Microfarads	2000	10
except that the insulation resistance in megohms need not exceed	25000	250

MOISTURE RESISTANCE

These capacitors will meet the moisture resistance requirements of EIA Specification RS-164, which requires units to withstand a 95% Relative Humidity at 40°C, except time of exposure may be increased to 500 hours. After exposure and subsequent drying periods, the insulation resistance will not be less than ⅓ of the initial requirement.



Tinned Copperweld Leads #20 AWG (.032) for sizes to ⅝″ Dia.
#18 AWG (.040) for sizes ⅝″ Dia. and over.

POLYESTER CAPACITORS

METALLIZED POLYESTER CAPACITORS TYPE 188 FILM WRAP / EPOXY END FILL −55°C TO +125°C

Type 188 Capacitors features extremely small size, light weight and self clearing metallized construction which virtually eliminates catastrophic failures. Well suited for Voltage Multiplier Circuits in TV power supplies and Electrostatic copiers. Also ideal for Potting or encapsulating in Electronic Sub assemblies, Power supplies, etc.

CAPACITANCE

Measurements shall be made at 1000 cycles per second for capacitance values thru 1. MFD and at 60 cycles per second for values over 1. MFD.

CAPACITANCE TOLERANCE

Standard capacitance tolerance is ±20% (M). Closer tolerances available upon request.

DISSIPATION FACTOR

The dissipation factor shall not exceed 1% when measured at 25°C. Measurements shall be made at 1000 Hz for capacitance values thru 1. MF and at 60 Hz for higher values.

TEST VOLTAGE

Capacitors shall withstand 200% of rated DC voltage for one minute at 25°, with the charging and discharge current limited to a maximum of 1. Ampere.

OPERATING TEMPERATURES

−55°C to +125°C.

LIFE TEST

Capacitors shall withstand a life test of 250 hours at 125°C, with 140% of the 125°C rated DC voltage applied. A resistance of one ohm per volt of applied voltage shall be inserted in series with the capacitor.

VOLTAGE DERATING

These capacitors will operate as full DC voltage ratings at 85°C. For operation at temperatures above 85°C, see Figure 4.

VIBRATION

Capacitors shall withstand a vibration test per Method 204, Test condition B of MIL-STD-202B as modified by MIL-C-27287. After test, the I.R. will be equal to or greater than 1/3 of the initial requirement.

INSULATION RESISTANCE

Temperature	Megohms x MF	IR Need Not Exceed Megohms
25°C	20,000	50,000
85°C	1,000	5,000
125°C	10	100

Measurements, shall be made after two minutes charge at rated voltage or 500 VDC, whichever is less.

HUMIDITY TEST

These capacitors shall meet the humidity test requirements of MIL-STD-202 Method, 103B, Test condition B. After testing, the I.R. will be equal to or greater than 1/3 of the initial requirement.

POLYESTER CAPACITORS

METALLIZED POLYESTER CAPACITORS TYPE 189 FILM WRAP / EPOXY END FILL −55°C TO +125°C

Type 189 Capacitors features extremely small size, light weight and self clearing metallized construction which virtually eliminates catastrophic failures. Well suited for Voltage Multiplier Circuits in TV power supplies and Electrostatic copiers. Also ideal for Potting or encapsulating in Electronic Sub assemblies, Power supplies, etc.

CAPACITANCE

Measurements shall be made at 1000 cycles per second for capacitance values thru 1. MFD and at 60 cycles per second for values over 1. MFD.

CAPACITANCE TOLERANCE

Standard capacitance tolerance is ±20% (M). Closer tolerances available upon request.

DISSIPATION FACTOR

The dissipation factor shall not exceed 1% when measured at 25°C. Measurements shall be made at 1000 Hz for capacitance values thru 1. MF and at 60 Hz for higher values.

TEST VOLTAGE

Capacitors shall withstand 200% of rated DC voltage for one minute at 25°, with the charging and discharge current limited to a maximum of 1. Ampere.

OPERATING TEMPERATURES

−55°C to +125°C.

LIFE TEST

Capacitors shall withstand a life test of 250 hours at 125°C, with 140% of the 125°C rated DC voltage applied. A resistance of one ohm per volt of applied voltage shall be inserted in series with the capacitor.

VOLTAGE DERATING

These capacitors will operate as full DC voltage ratings at 85°C. For operation at temperatures above 85°C, see Figure 4.

VIBRATION

Capacitors shall withstand a vibration test per Method 204, Test condition B of MIL-STD-202B as modified by MIL-C-27287.

INSULATION RESISTANCE

Temperature	Megohms x MF	IR Need Not Exceed Megohms
25°C	20,000	50,000
85°C	1,000	5,000
125°C	10	100

Measurements, shall be made after two minutes charge at rated voltage or 500 VDC, whichever is less.

HUMIDITY TEST

These capacitors shall meet the humidity test requirements of MIL-STD-202 Method, 103B, Test condition B. After testing, the I.R. will be equal to or greater than ⅓ of the initial requirement.

NOMENCLATURE

189 E 104 M

Case Style
188 - Cylindrical
189 - Flat Oval

DC Rated Voltage
B = 100 VDC
C = 200 VDC
E = 400 VDC
F = 600 VDC

Capacitance
Expressed in pf, first two digits are significant figures, third digit indicates number of zeroes following first two digits.

Capacitance Tolerance
M = ±20%
K = ±10%
J = ±5%

METALLIZED PAPER/ MYLAR* CAPACITORS

METALLIZED PAPER/MYLAR* CAPACITORS HERMETICALLY SEALED TYPE 230

ELECTRICAL AND ENVIRONMENTAL CHARACTERISTICS

1. CAPACITANCE MEASUREMENTS

Capacitors of 1.0 μF or less shall be measured at a frequency of 1000 Hz. Capacitors greater than 1.0 μF measured at 60 Hz.

The standard capacitance tolerance is 20%. Other tolerances are available upon request.
Reference: MIL-STD-202, Method 305.

2. TEMPERATURE CHARACTERISTICS

The maximum change in capacitance from the measured value at +25°C shall be as follows:
Characteristic: N — Temperature: −55°C — Max. Change: −15%.

3. DISSIPATION FACTOR

When measured as specified in Paragraph 1, the dissipation factor at +25°C shall not exceed 1.0%.

4. INSULATION RESISTANCE

When measured at 25°C, and rated voltage (or 500 VDC, whichever is less), the insulation resistance shall be as follows:
Characteristic: N — Megohms x Microfarads: 2,000 — Need Not Exceed (Megohms): 12,000.
Reference: MIL-STD-202, Method 302.

5. VOLTAGE DERATING

The capacitors may be operated at full rated voltage from −55°C to +125°C.

6. VOLTAGE TEST

When tested at +25°C, the capacitors shall withstand the indicated DC test voltages for a period of one minute:

Terminal to terminal	200% of DC rating
Terminal to case (where case is not a terminal)	200% of DC rating

Reference: MIL-STD-202, Method 301.

7. LIFE TESTING

When tested for 1000 hours at 140% of the full rated voltage for the test temperature, the capacitors shall exhibit no more than one failure in twelve pieces tested. A failure is defined as:
- a) A capacitance change of more than 10% of its initial value;
- b) A dissipation factor greater than that specified in Paragraph 3;
- c) An insulation resistance less than 1/3 that specified in Paragraph 4; or
- d) A permanent open or short.

8. VIBRATION

The capacitors will meet or exceed the vibration requirements of MIL-STD-202, Method 204, Condition B.

POLYSTYRENE FILM CAPACITORS

POLYSTYRENE FILM CAPACITORS HERMETICALLY SEALED TYPE 231 −65°C to +85°C

ELECTRICAL AND ENVIRONMENTAL CHARACTERISTICS

1. CAPACITANCE MEASUREMENTS

Capacitors of 1.0 µF or less shall be measured at a frequency of 1000 Hz. Capacitors greater than 1.0 µF measured at 60 Hz.
Tolerances of ±20%, ±10%, ±5%, ±2%, ±1% are standard. Tolerances closer than ±1% are available upon request.
Reference: MIL-STD-202, Method 305.

2. TEMPERATURE/CHARACTERISTICS AND STABILITY

When measured over the full operating range, the Temperature Coefficient shall be −120 ppm/°C ±30 ppm/°C.
There shall be less than 0.1% change per year in capacitance when operated between +20°C and +50°C. When cycled from −55°C to +75°C, the capacitance shall not vary more than 0.2% from its initial measurement.

3. DISSIPATION FACTOR

When measured as specified in Paragraph 1, the dissipation factor at +25°C shall not exceed 0.1%.

4. INSULATION RESISTANCE

When measured at +25°C, and rated voltage (or 500 VDC, whichever is less), the insulation resistance shall be a minimum of 200,000 megohm-microfarads, but need not exceed 500,000 megohms. The period of electrification shall not exceed two minutes.
Reference: MIL-STD-202, Method 302.

5. VOLTAGE DERATING

The capacitors may be operated at full rated voltage from −55°C to +85°C.

6. VOLTAGE TEST

When tested at +25°C, the capacitors shall withstand the indicated DC test voltages for a period of one minute:

Terminal to terminal	200% of DC rating
Terminal to case	200% of DC rating

Reference: MIL-STD-202, Method 301.

7. LIFE TESTING

When tested at 85°C for 250 hours at 140% of the rated voltage, the capacitors shall exhibit no more than one failure in twelve pieces tested. A failure is defined as:
a) A capacitance change of more than 6% of its initial value;
b) A dissipation factor greater than that specified in Paragraph 3;
c) An insulation resistance less than 60% that specified in Paragraph 4; or
d) A permanent open or short.

8. VIBRATION

The capacitors will meet or exceed the vibration requirements of MIL-STD-202, METHOD 201.

CERAMIC CAPACITORS

The DECI-CAP

4.7 pF to 27,000 pF in 49 Standard Values.
Available from stock for Immediate Delivery.
Epoxy molded for highest performance and reliability.
High density cordwood packaging facilitated by single size.
(.100 diameter x .250 length for entire range.)

DECI-CAPS offer the design engineer unique epoxy-molded reliability and a new high standard in performance. These subminiature ceramic capacitors feature low power factor and exhibit outstanding stability over the entire —55° to +125°C operating range. Rugged epoxy molded envelope and high quality ceramic dielectric is designed to meet the environmental requirements of MIL-C-11015.

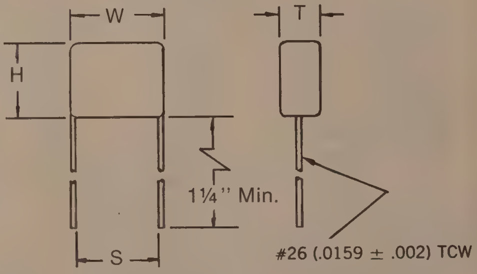
The HY-CAP

High Capacity Ceramic Capacitor. Capacitance Range .01 mfd to 2.5 mfd.*

Nytronics offers the HY-CAP Ceramic Capacitor to accommodate design application in coupling, by-pass, filter, and all other circuits where temperature stability and high capacitance are mandatory. .016 diameter leads are ideal for point-to-point wiring as well as PC work.



ELECTRICAL CHARACTERISTICS

Capacitance Range:.01 mfd to 2.5 mfd *
Tolerance: ±20% Std.; ±10% also available
Working Voltage: 100 Volts D.C. (No derating to 125°C).
Dissipation Factor: .025 Max.
Insulation Resistance: 1000 Megohm-microfarad, min.
Capacitance Change with Temperature: Max. Change ±15% from 25°C Cap., from —55° to +125°C.

CERAMIC CAPACITORS

The NYT-CAP

NPO SERIES

Ultra High Stability —0 ±25 ppm/°C Temperature Coefficient.
Transfer Molded Epoxy Case for high component density.
New extended range to 10,000 pF.
Available from stock.

A new development from Nytronics' ceramic research laboratory now makes possible the manufacture of an extremely stable ceramic capacitor in a miniature package size. Now you can have the capacitor stability long desired for use in oscillators, filters, and other critical circuitry.

ELECTRICAL CHARACTERISTICS
Capacitance Range: 4.7 pF to 10,000 pF.
Capacitance Tolerance: ±10% Standard; others available.
Working Voltage: 200 Volts D.C. to 4700 pF; 50 WVDC above this value.
Temperature Coefficient: ±25 ppm/°C over temperature range of −55°C to +125°C.
Dissipation Factor: Less than 0.001 at 25°C.
Insulation Resistance: 100,000 Megohms at 25°C. (Minimum)

Note: Hybrid Manufacturers — Also available from stock as monolithic (unencapsulated) chips for micro-circuit applications. "A" chip size is .170 X .065 X .070; "B" is .280 X .195 X .070. Other specs same as above. To order use part No. prefix NCU in place of NC.

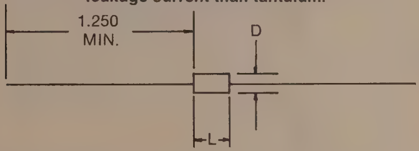
The MILI-CAP

EPOXY MOLDED EK12 - EK16

New series of encapsulated axial lead ceramic capacitors featuring values to 3.3 uf. Much lower leakage current than tantalum.



Case Size	L	D	Lead Size
A	.160 ±.010	.090 ±.010	26 Awg
B	.250 ±.010	.090 ±.010	26
C	.390 ±.010	.140 ±.010	22
D	.500 ±.020	.250 ±.015	22
E	.690 ±.030	.350 ±.020	22

ELECTRICAL CHARACTERISTICS:

Capacitance Range: 10 pF to 3.3 uF
Capacitance Tolerance: ±10% std.; other available
Power Factor: Less than 2.5% at 1 KHz, 25°C
Temperature Range: −55°C to ±125°C
Temperature Characteristic: ±15% max. Change from 25°C
Insulation Resistance: capacitance >100,000 Megohms or 1000 Megohms Microfarads, whichever is less.

Designed to meet the requirements of MIL-C-11015/20 B

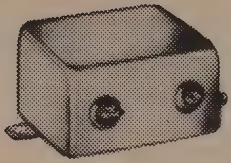
MIL-C-25 (LATEST REVISION)

CAPACITORS MIL TYPE CP53, CP54, CP55



Section assembled in hermetically sealed tin-coated drawn-shell container. Mineral-oil impregnated and filled. Lug-type terminal seals. Meets requirements of MIL-C-25.

Temperature Rating: −55°C to +85°C.

Standard Tolerance: −10% to +20%.

PDM VARIATIONS

MIL Type CP53, with terminals on side.

PDMT (CP54) With terminals on top.

PDMB (CP55) With terminals on the bottom.

SERIES 4308

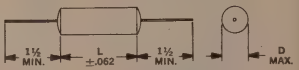
SERIES 3200



SERIES 3400

WRAP AND FILL STYLES utilize thermosetting pressure sensitive polyester film wrap filled with a flame-retardant epoxy providing excellent moisture resistance and protection against high external voltage stresses.

EPOXY DIPPED STYLES are coated with a rigid flame-retardant epoxy and offer excellent lead strength. The **BLUESEAL** process assures high moisture resistance in a small, economical package.

PLASTIC CASED STYLES employ a rectangular premolded case completely filled with a flame retardant epoxy assuring uniformity of size and shape. The rugged design provides added capacitance stability, environmental protection, and reliability under severe mechanical stress.

CHARACTERISTICS

CAPACITANCE: Standard tolerance is ±20%.

OPERATING TEMPERATURE RANGE: −55°C to +125°C. Derate 50% for operation at 125°C.

DIELECTRIC STRENGTH: 150% of rated voltage.

INSULATION RESISTANCE: Minimum 10,000 megohm-microfarads, but need not exceed 30,000 megohms.

DISSIPATION FACTOR: 1% maximum for .01 MFD and above, for less than .01 MFD, 1.5% maximum.

CONSTRUCTION: Metalized Polyester Film, Extended Foil.

LEADS: Tinned copper.

Standard ratings in all case styles are 50 thru 600 VDC and up to 10 MFD.

THE POTTER COMPANY also manufactures other types of film capacitors such as Metalized Polycarbonate and Polyester & Foil. Please send for complete catalog, listing full specifications for all types.

HOW TO ORDER

Please order by complete part number as outlined below.

3460 G 393 M

TYPE
High Voltage
Metalized Polyester
Wrap and Fill

VOLTAGE
G — 1000
J — 2000
M — 4000
P — 6000
V — 8000
S — 10,000
W — 15,000

CAPACITANCE
Expressed in picofarads and identified by a three-digit number.
First two digits represent significant figures.
Last digit specifies the number of zeros.

CAPACITANCE TOLERANCE
M — ±20%
K — ±10%

Send for Complete BLUSEAL CATALOG SERIES 3460

CHARACTERISTICS

CAPACITANCE: Standard tolerance is ±20%.

OPERATING TEMP. RANGE: −40°C to +85°C without voltage derating.

DIELECTRIC STRENGTH: 150% of rated voltage for capacitors rated at 1000 VDC and 2000 VDC, 125% of rated voltage for capacitors rated at 4000 VDC through 15,000 VDC.

INSULATION RESISTANCE: 10,000 megohm-microfarads, but need not exceed 30,000 megohms at 25°C.

DISSIPATION FACTOR: 1% maximum at 25°C and 1000 Hz.

CONSTRUCTION: Metalized Polyester film, extended foil, axial leads.

CASE: Yellow thermosetting pressure-sensitive adhesive polyester film wrap, with blue flame-retardant epoxy end fill.

LEADS: Tinned copper.
22 AWG for All Diameters up to and Including .39
20 AWG for All Diameters .40 and Larger

MUCON® SUBminiature CERAMIC CAPACITORS

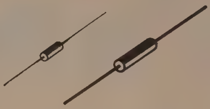
ULTRA-STABLE NPO MU-CAPS®

MOST STABLE MINIATURE CAPACITOR MADE

T.C.--ZERO ±30 PPM/°C

AXIAL
RADIAL

SQUARE ... from 1 PF. to .22 MF.



TUBULAR ... from 1 PF. to .22 MF.

THINLINE

RADIAL
AXIAL

Mucon's Thinline Capacitors are made of the following 16 different ceramic bodies for a broad choice of size and electrical properties:

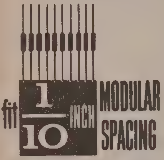
Temperature-Compensating Materials:	NP0	N080	N150
	N220	N330	N450
	N750	N1400	N2400
	N3300	N4700	N5600

General Purpose Materials: LOW-VAR, STABLE-K, HIGH-K & SUPER-K for wide range of stability and capacitance.

SPECIFICATIONS

Capacitance: Range: TEMP.-COMP. BODIES 1/2 pf - 2200 pf
GEN. PURPOSE BODIES 50 pf - 150,000 pf
Voltages: 25 WVDC, 50WVDC, 200 WVDC and 500 WVDC
Leads: Tinned Copper, Nickel or Dumet to MIL Spec.
Shapes: Square, rectangular, single or multiple element.

NARROW-CAPS®

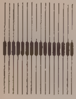


NARROW-CAPS are designed for 1/10" modular spacing on printed circuits, or for cordwood applications.

SPECIFICATIONS

Capacitance: Range: 5 pf - 100.000 pf
Voltages: 10 WVDC - 50 WVDC
Sizes: .095" max. wide x 1/4" max. long x .095" max. thick through 750 pf. Larger values 5/16" max. long.
Leads: #26 Tinned Copper, Nickel or Dumet to MIL Spec.

SLIM-CAPS ®



Designed for applications which require capacitors slimmer than NARROW-CAPS. SLIM-CAPS are .065" wide x .065" thick max. Body lengths from .100"—.250" max.

SPECIFICATIONS

Capacitance Range: 1/2 pf - 20,000 pf
Voltages: 50 WVDC
Leads: #30 Tinned Copper, Nickel or Dumet to MIL Spec.

CHIPS SINGLE LAYER

Sizes: .030" Sq. and up
Capacitance: SUPER-K Ceramic 150 PF. to 10,000 PF.
HIGH-K " 100 PF. to 5,000 PF.
STABLE-K " 50 PF. to 2,700 PF.
LOW-VAR " 20 PF. to 1,000 PF.
TEMP. COMP. " 1 PF. to 330 PF.
Electrodes: Normally silver. Other precious metals on request
Voltage: 50 WVDC

CHIPS MONOLITHIC MULTILAYER

Sizes: From .050" x .050" x .050" to .610" x .310" x .080"
Capacitance: STABLE-K Ceramic 10 PF. to 2 MF.
NPO " 1 PF. to .027 MF.
Electrodes: Normally silver. Other precious metals on request
Voltage: 50 WVDC

M-CAPS

M-CAPS are monolithic capacitors with maximum capacitance/volume ratio in a choice of 3 dielectrics to cover all requirements. From .100" square to .300" square.

RIBBON LEADS

Style RLA

Size and specifications same as "Thinline" capacitors shown above, except radial and axial tinned copper ribbon leads, approximately .006" thick x 3/32" wide for units with max. size of .150" and up; .045" wide for smaller units.

MUCON® MU® CAPS ULTRA-STABLE ±.3% MOLDED CAPACITORS

MUCON ultra stable MU-CAPS consist of capacitor elements made of MUCON NPO ceramic encased in a specially formulated epoxy. Meet MIL-C-20.

CAPACITANCE:	Values 1000 Pf and below measured at 1 MHz. Values above 1000 Pf measured at 1 KHz.
CAPAC. TOL.:	Last letter of part number. Specify M for ± 20%, K for ± 10%, J for ± 5%, G for ± 2%. Note all parts are shown for ± 20%.
POWER FACTOR:	Measured same as capacitance .1% max.
INSUL. RESIST.:	100,000 Megohms or 1000 Megohm Microfarads whichever is less.
WORKING VOLTAGE:	50 WVDC
TEMP. RANGE:	−55°C to +125°C.
TEMP. COEFF.:	Zero ± 30 ppm/°C.
TEMP. CHARACT.:	± .3% max. from + 25°C. See curve.
LEADS:	No. 22 AWG tinned copper 1¼" long minimum except #26 AWG for case sizes MT11 thru MT13.

Hermetically, sealed, rectangular

17 SERIES — METALIZED*MYLAR

For circuits that require the ultimate electrical properties Non Polar coupled with the smallest size over a wide temp. range.

- IR: 50K Meg × MFD Min. +25° C
- DF Less Than 1% IKHZ at +25°C
- Dielectric Strength: 200% of rated VDC 1 Min. Max.
- Temperature Range: −55° C to +125° C
- Voltage versus Temp.: 100% rated Voltage to 100° C 50% derating to +125° C
- Capacity versus Temp.: −55° C to +25° C, +5% change; +25° C to +85° C, +3%, and +25° C to +105° C, +7% change
- Quality Control and Production Tests consist of 100% group A requirements of MIL C 18312 on hermetic seal style E and all tests except for moisture leak tests on styles W-U-R-N-B-D.

22 SERIES — METALIZED POLYCARBONATE

For circuits that require flat T.C., low losses, small size over a wide temperature and frequency range. Used in many wave filter, discriminator and critical timing circuits.

- IR: 100K Meg × MFD Min. at +25° C
- DF less than .3% measured IKHZ at 25° C
- Dielectric Strength: Up to 200% of rated VDC Max. I Min.
- Temperature Range: −55° C to +105° C. When properly encased will operate to +125° C
- Temperature Coefficient: From −55° C to +25° C, 1.5% max change; +25° C to +105° C, −.7% max. change.
- QC & Production Tests consist of 100% to group A requirements MIL C 18312 on hermetic seal style E and to all except moisture leak test on styles W-U-R-N-B-D.

13 SERIES — POLYSTYRENE

For the instruments that require long term stability, low leakage, minimum dielectric absorption.

Used in many critical computer timing and hybrid circuits.

- Temperature Range: −55° C to +85° C
- IR: 100K Meg × MFD Min +25° C
- DF: .05% Max IKHZ at +25° C
- TC: 130 PPM / ° C ± 20 PPM
- Quality and Production test consists of 100% to group A level of MIL C 19978 on style E and all requirements except moisture leak test on style R.

10 SERIES —*MYLAR FOIL

For the instrument that requires high reliability, precise characteristics year after year. Used in many communication, telephone, tracking and test instrument devices.

- Temperature Range: −55° C to +125° C
- IR: 50K Meg × MFD Min. at +25° C
- Dielectric Strength: 200% of rated VDC max. I Min.
- DF less than .5% IKHZ at 25° C
- Temperature Coefficient:
  - +5% change from −55° C to +25° C
  - +5% change from +25° C to +85° C
  - +9% change from +25° C to +105° C
  - +14% change from +25° C to +125° C
- QC and Production Tests are 100% to group A of MIL C 19978 on hermetic style E and all tests except moisture leak requirement style R.

ORDERING AND PART NUMBER INFORMATION

The dimensional tolerances for case styles R-W-U-D are ±.05. Styles G-B-N-E are ±.031, on length, and ±.015 for other dimensions. All units are available in any value, ranging from .001 MFD to their maximum capacity, with tolerances to ±1%. Standard tolerance is ±20%. Other types of leads, configurations, and encasements are available upon request to meet your special requirements.

DOWN GO COST, SIZE, WEIGHT, VOLUME.

DESIGN SMALLER WITH NEW SANGAMO **Power Pack**™ *TYPE 100 CAPACITORS*

Imagine a much smaller, much lighter weight computer grade electrolytic capacitor. It's a breakthrough in technology that lets you break through in design.

You can use fewer capacitors at less cost because the Sangamo Type 100 features high ripple current capability up to 46 amps at 120 Hz @ 65°C. Regulate the power supply better thanks to ESR values ranging from .0062 ohms to .052 ohms at 120 Hz. And count on additional savings since you get no temperature or voltage derating with operating temperatures that range from—55°C to 105°C.

What's more, all-aluminum construction of the Type 100 allows higher internal temperature without deterioration. And excellent impedance vs. frequency response over the entire temperature range means power supplies can operate more efficiently in the 20 to 40 KHz range.

For details on Type 100 Power Pack Capacitors, just write to Jim Dutton, Marketing Manager Aluminum Electrolytic Capacitors, Sangamo Electric Company, Pickens, S. C. 29671, U.S.A. Or call him at (803) 878-6311 and ask for Bulletin 2271.

Then start thinking small.

METALLIZED POLYESTER CAPACITORS

SEACOR DELIVERS

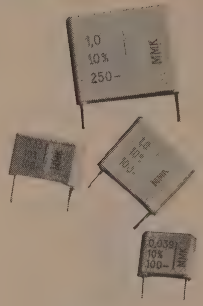
SERIES MMK METALLIZED POLYESTER CAPACITORS

DESCRIPTION

Series MMK metallized polyester capacitors are miniature, rectangular units with a molded thermoplastic case meeting U.L. flammability specifications 94 VE-1. The special MMKO case is molded of an extraordinary new plastic material. This special case has a 94 VE-0 flame rating and is virtually impervious to most solvents including, for example, FREON TMC* and those used for cleaning and degreasing electronic assemblies. It also exhibits very low water absorption; less than 0.08%/24 hours and 0.35% at equilibrium. The material is non-corroding.

All electrical specifications and dimensional data are identical for both the standard MMK and the special MMKO.

Series MMK units are available in 42 standard, commonly required values from 0.0027 mfd to 6.8 mfd. They are characterized by low dissipation factors and high circulating current capability. MMK's are designed for tube or solid state printed circuit applications where shape factors make for ease of assembly and stable vertical mounting with low profile. MMK's are available in voltage ratings of 100, 250, 400 and 630 VDC although not all values are standard in all voltages. Construction uses a non-inductive type winding.



MMK

SPECIFICATIONS

Capacitance Values: 0.0027 mfd to 6.8 mfd
Tolerances: ±5%, 10%, 20% std.; ±1% and 2.5% spcl.
Working Voltages: 100 VDC, 250 VDC, 400 VDC, 630 VDC, nominal
Test Voltages—
- **Between term:** 1.5 x working voltage applied for 1 min.
- **Term to Case:** 2500 VDC
- **Life Test:** 1.5 x working VDC @ 85°C for 1000 hrs

Dissipation Factor, tan δ:
- less than 100 x 10^{-4} @ 1 KHz for C greater than 1 μF
- less than 200 x 10^{-4} @ 10 KHz for C less than 1 μF

Insulation Resistance: >30,000 Mohms for C less than 0.1 μF and VDC greater than 250
Op. Temp. Range: −40°C to 100°C, derate voltage 1.5%/°C from 85°C to 100°C
Temp. Coeff.: Tc ∓ +(400±200) x 10^{-6}/°C; approx. 600 ppm/°C
Self Inductance: Approx. 10 nH/cm of case length

Construction—
- **Style:** Flat, rectangular, low profile; radial wire leads
- **Case:** Std. MMK, self-extinguishing thermoplastic; Spcl. MMKO, special thermoplastic (VE-O), epoxy resin end fill
- **Leads:** MMK, MMKO, copper tinned leads 0.236" long

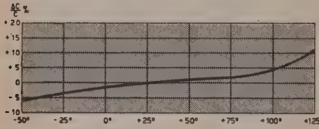
Request complete specifications.

TYPE 105 METALLIZED POLYESTER MINIATURE CAPACITORS

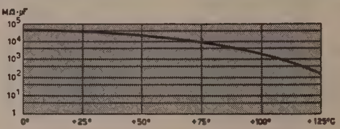
105

FEATURES—

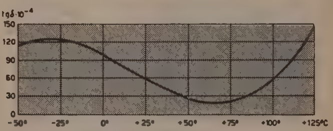
Miniature size ■ Polyester ("Mylar"*) wound dielectric ■ Encapsulated; epoxy end fill ■ Low cost ■ −55°C to +125°C ■ Low dissipation factor ■ Non-inductive.



Capacitance Versus Temperature



Insulation Resistance Versus Temperature



Power Factor Versus Temperature

SPECIFICATIONS—

Std. Values: (100V) 0.068 mfd to 10.0 mfd; (250V) 0.033 mfd to 4.7 mfd; (400V) 0.015 mfd to 2.2 mfd; (630V) .01 mfd to 0.47 mfd
Tolerances: ±5%, 10% std; other tols. on request
Working Voltage(s): 100 VDC, 250 VDC, 400 VDC, 630 VDC
Test Voltage: 1.5 x working voltage
Power Factor: Tan δ ≤7.5 x 10^{-3} @ 1 KHz, 25°C
Insulation Resistance: C >.33 mfd, RC ≥10,000 Mohms microfarad
C ≤.33 mfd, R ≥30,000 Mohms
Op. Temp. Range: −55°C to +125°C; derate V 1.2% above 85°C
Temp. Coeff.: Approx. 600 ppm/°C; see curve
Construction: Non-inductive; metallized polyester, Mylar wrap, epoxy end fill
Leads: Solder-coated, copper clad steel wire, 1.38" ±.2" long

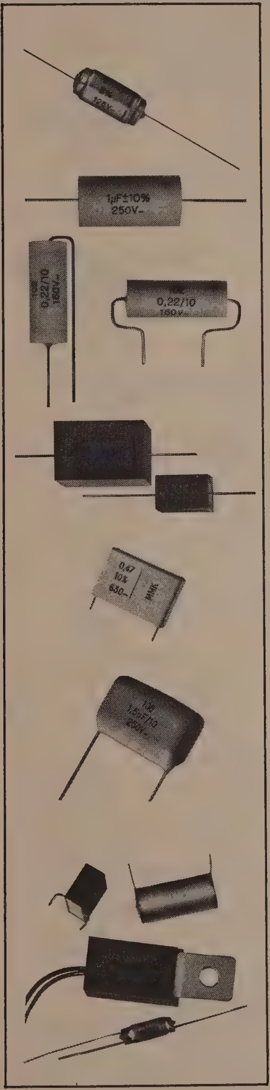
CAPACITORS
FILM
CAPACITORS

STANDARD OR SPECIAL—QUALITY and PRICE



Whatever your wound film capacitor requirement, Seacor probably has it. And if it's really special—we'll do it.

Seacor: a broad line of standard wound dielectrics; quality and reliable delivery **proven** over the years; more than competitive prices. And, a top-flight engineering staff with an insatiable appetite for specials.

Representative Seacor wound capacitors are listed—and there are lots of others which aren't. Whether you need an off the shelf standard or an exotic ultraspecial: Check Seacor. First.

TUBULAR AXIAL LEAD

Polystyrene Foil: 25V, 63V, 160V, 630V; 10 PF to 0.1 MF; 1%, 2-1/2%, 5%, 10%, 20%.

Polyester Foil: 160V, 250V, 400V, 630V, 1000V; 1000 PF to 2 MF; 5%, 10%, 20%.

Metallized Polyester: 100V, 160V, 250V, 400V, 630V, 1000V; 1000 PF to 20 MF; 5%, 10%, 20%.

Metallized Polycarbonate: 100V, 160V, 250V, 400V, 630V, 1000V; 3300 PF to 20 MF; 5%, 10%, 20%.

HV Metallized Polycarbonate: 1500V, 2500V, 3500V, 5000V, 10,000V, 16,000V, 22,000V; 470 PF to 1.0 MF; 5%, 10%, 20%.

MOLDED CASE, AXIAL LEAD

Metallized Polyester: 63V, 160V, 250V, 400V; 0.01 MF to 10.0 MF; 5%, 10%, 20%.

Metallized Polycarbonate: 63V, 160V, 250V, 400V; 0.01 MF to 10.0 MF; 1%, 2%, 5%, 10%, 20%.

MOLDED CASE, RADIAL LEAD

Metallized Polyester: 100V, 250V, 400V, 630V; 1000 PF to 6.8 MF; 5%, 10%, 20%.

Metallized Polycarbonate: 63V, 160V, 250V, 400V; 0.01 MF to 10.0 MF; 1%, 2%, 5%, 10%, 20%.

EPOXY DIPPED RADIAL LEAD

Metallized Polyester: 63V, 160V, 250V, 400V, 630V; 1000 PF to 10 MF; 5%, 10%, 20%.

Metallized Polycarbonate: 63V, 160V, 250V, 400V; 0.01 MF to 10.0 MF; 1%, 2%, 5%, 10%, 20%.

Polyester Foil: 50V, 100V, 200V, 400V, 600V; 1000 PF to 0.47 MF; 10%, 20%.

ABOUT THOSE SPECIALS:

There's no "take 'em or leave 'em" at Seacor. Any wound capacitor you need—however exotic—we'll do our level best to produce for you, on-time and at high Seacor quality: closer tolerances; new dielectric films; film combinations, e.g., mylar/polycarbonate; high voltages, e.g., 25KV to 40KV. And mechanical specials: special brackets, lugs, leads, form factors, materials, etc., etc.

Seacor's engineers **can.** Find out for yourself.

DIELECTRICS AND CHARACTERISTICS

POLYESTER (MYLAR) FOIL
Cap. Range: .0003-10 mfds
Volt. Range: 50-2000 vdc
Temp. Range: −55 to 125°C
IR: 50 K (meg) (mfds) or 100 K megs
DF: .75% max.

METALLIZED POLYESTER
Cap. Range: .01-50 mfds
Volt. Range: 50 vdc-10 kvdc
Temp. Range: −55 to 125°C
IR: 25 k (meg) (mfds) or 50 K megs
DF: 1% max.

POLYCARBONATE FOIL
Cap. Range: .0003-5 mfds
Volt. Range: 25-1000 vdc
Temp. Range: −55 to 125°C
IR: 75 K (meg) (mfds) or 500 K megs
DF: .3% max.

METALLIZED POLYCARBONATE
Cap. Range: .01-50 mfds
Volt. Range: 50-1000 vdc
Temp. Range: −55 to 125°C
IR: 30 K (meg) (mfds) or 150 K megs
DF: .3% max.

POLYPROPYLENE FOIL
Cap. Range: .0003-5 mfds
Volt. Range: 50-1000 vdc
Temp. Range: −55 to 105°C
IR: 100 K (meg) (mfds) or 500 K megs
DF: .1% max.

METALLIZED POLYPROPYLENE
Cap. Range: .01-50 mfds
Volt. Range: 50 V-10,000 vdc
Temp. Range: −55 to 105°C
IR: 50 K (meg) (mfds) or 100 K megs
DF: .2% max.

TEFLON
Cap. Range: .001-5 mfd
Volt. Range: 50-600 vdc
Temp. Range: −55 to + 160°C
IR: 1000 K (meg) (mfds) or 2000 K megs
DF: .01% max.

POLYSTYRENE FOIL
Cap. Range: .0005-5 mfds
Volt. Range: 50-600 vdc
Temp. Range: −55 to 85°C
IR: 100 K (meg) (mfds) or 500 K megs
DF: .1% max.

POLYSULFONE FOIL
Cap. Range: .0003-5 mfds
Volt. Range: 25-1000 vdc
Temp. Range: −55 to 150°C
IR: 75 K (meg) (mfds) or 500 K megs
DF: .3% max.

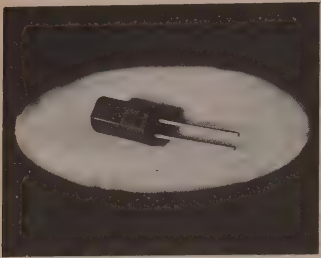
SPRAGUE CAPACITORS

TYPE 198D ECONOLINE★ PLASTIC-CASE SOLID-TANTALUM CAPACITORS



- Low-cost production-oriented capacitors.
- Solid flame-retardant epoxy case has precise dimensions for automatic insertion. Completely shock and vibration resistant.
- Flatted area on side has clear easy-to-read marking. 2nd flat near top provides easy identification of positive lead either visually or by touch.
- Standoff feet on base eliminate moisture entrapment and facilitate cleaning of wiring boards.
- Low d-c leakage, low dissipation factor.
- Withstand severe temperature cycling and temperature shock over entire temperature range of −55 C to +85 C.
- Units listed below have straight leads with .100″ spacing as standard. For formed leads with .200″ or .250″ spacing, change last digit in Cat. No. to 2 or 3, respectively.
- Capacitance Tolerance, ±10%. Capacitors with asterisk (*) are also available with tolerance of ±20%. For ±20% tolerance, change 9th character in Cat. No. from 9 to 0.
- For complete technical data, refer to latest issue of Engineering Bulletin 3546.

SPRAGUE CAPACITORS

TYPE 196D DIPPED TANTALEX® SOLID-TANTALUM CAPACITORS

- Epoxy-Dipped Coating Economically Provides Good Electrical and Mechanical Protection.
- High Stability, Very Little Capacitance Change, Even at Outer Limits of Operating Temperature Range (−55C to +85C).
- Low Dissipation Factor Permits Higher Ripples.
- Radial Leads For Mounting on Printed Boards.
- Capacitance Tolerance, ±10%. Capacitors With Asterisk (*) Are Also Available With Tolerance of ±20%. For ±20% Tolerance, Change 9th Character in Cat. No. from 9 to 0.
- Capacitors Listed Here Have Long Leads. Catalog Numbers Ending with A1 Have Straight Leads with .125″ Spacing; A3 Indicates Straight Leads with .250″ Spacing (See Unit 1). Numbers Ending with E4 Have "Hockeystick" Leads with .250″ Spacing (See Unit 2). For Short "Hockeystick" Pin Leads (.187″ L., .250″ Spacing) Change A1 or E4 to E3. (See Unit 3).
- For Complete Technical Data, Refer to Latest Issue of Engineering Bulletin 3545.

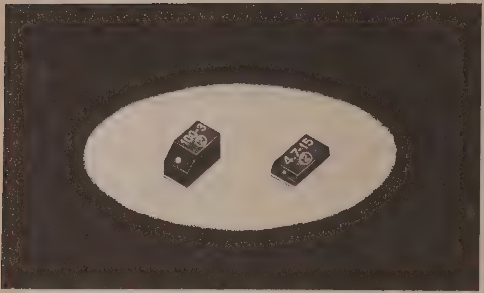
SPRAGUE CAPACITORS

TYPE 193D DOMINO® SOLID-TANTALUM CAPACITORS WITH FLUSH SOLDERABLE PAD TERMINALS



- Designed for hybrid circuit and low-profile printed wiring board applications.
- Fully-molded construction. Epoxy case provides superior mechanical protection during handling and mounting as well as excellent stability in severe operating and storage environments.
- Leadless design minimizes inductance and saves space. Exposed terminal surfaces on bottom of capacitor. Can be attached to substrates or circuit boards by dip-soldering, welding, re-flow soldering, or other conventional methods.
- Compatible with automatic assembly equipment.
- Low-profile configuration makes Domino Capacitors ideal for use in molded assemblies such as dual in-line (DIP) packages.
- Low d-c leakage, low dissipation factor.
- Capacitance tolerance, ±10%.
- Operating range −55C to +85C. May be operated up to +125C when derated to two-thirds of rated working voltage.
- For complete technical data, refer to latest issue of Engineering Bulletin 3532.

*Capacitors listed here have a capacitance tolerance of ±10%. These units are also available with a capacitance tolerance of ±5% on special order. To specify ±5% capacitors, change the 8th and 9th characters in the catalog number from "X9" to "X5."

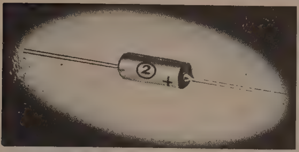
SPRAGUE CAPACITORS

TYPE 150D TANTALEX® SOLID-TANTALUM CAPACITORS



- Hermetically sealed metal case.
- Exhibit stable capacitance and low dissipation factor over temperature range of −80 C to +85 C. With appropriate voltage derating, may be operated to +125 C.
- Listed units have plastic sleeves. For bare case, end Cat. No. in "0" instead of "2."
- Also available as non-polarized capacitors. See Type 151D in Catalog C-563.
- Listed units have capacitance tolerance of ±10%. Capacitors with asterisk (*) are also available with capacitance tolerance of ±20%. For ±20% tolerance, change 9th character in catalog number from 9 to 0.
- For complete technical data, refer to latest issue of Engineering Bulletin 3520.

EXTENDED-RANGE TYPE 150D TANTALEX® CAPACITORS®

- Extended capacitance ratings (higher capacitance values in smaller case sizes) required in some new equipment designs.
- Available at premium prices.

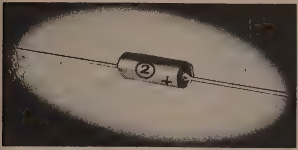
SPRAGUE CAPACITORS

EST. REL. MIL-C-39003 STYLE CSR13 SOLID TANTALUMS



- Solid-electrolyte tantalum type. Glass-to-metal hermetic seal. 125 C operation.
- Handled by Sprague and Sprague industrial distributors in full compliance with MIL-STD-790. Manufactured, marked, packed, shipped, received, inspected, stored in separate area, free from contamination or mix-up with other components.
- For complete technical data, refer to latest issue of Engineering Bulletin 3520.2.

*Type Nos. shown are incomplete. Capacitance Tolerance and/or Failure Rate must be added at end of number. Where 10th character (cap. tol.) is blank, insert "K" for ±10%, "M" for ±20%. A last character must be added to denote Failure Rate. Insert "L" for 2%, "M" for 1%, "P" for 0.1%, "R" for 0.01%, "S" for 0.001%.

SPRAGUE CAPACITORS

ESTABLISHED RELIABILITY MIL-C-39006
STYLE CLR25/27 and CLR35/37 FOIL TANTALUM CAPACITORS

- Rated for operation to 85 C (to 125 C with voltage derating).
- Handled by Sprague and Sprague industrial distributors in full compliance with MIL-STD-790. Manufactured, marked, packed, shipped, received inspected, stored in separate area, free from contamination or mix-up with other components.
- Capacitance tolerances: Style CLR25 27 . . . 15 thru 30V = +75, −15%; 50 thru 75V = +50, −15%; 100V and up = +30, −15%. Style CLR35 37 . . . 15 thru 150V = ±20%; 200V and up = ±15%.

SPRAGUE CAPACITORS

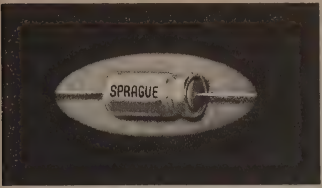
TYPE 130D SINTERED-ANODE TANTALEX® CAPACITORS

NOTE: Type 109D (shown on next page) are comparable capacitors, and are generally more readily available.



- Reliable, superior quality capacitors rated for 125 C operation without voltage derating.
- Especially suited for military and critical industrial equipment.
- Capacitors listed below have plastic-film insulation. For bare metal case, change last digit of Cat. No. from "2" to "0" and subtract .016" from diameter and .063" from length.
- Meets 2000 cycle MIL missile vibration requirements.
- For complete technical data, refer to latest issue of Sprague Engineering Bulletins 3701 and 3701.2.

SIZE CODE

C = .203"D. x .515"L.
F = .296"D. x .703"L.
T = .390"D. x .828"L.
W = .390"D. x 1.312"L.

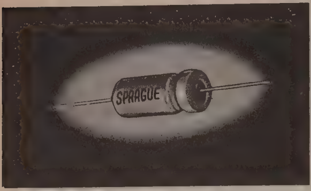
SPRAGUE CAPACITORS

TYPE 109D SINTERED-ANODE TANTALEX® CAPACITORS



- Reliable, superior quality capacitors dual-rated for 125 C and 85C operation.
- Especially suited for military and critical industrial equipment.
- Capacitors listed below have plastic-film insulation. For bare metal case, change last digit of Cat. No. from "2" to "0" and subtract .016" from diameter and .063" from length.
- Meets 2000 cycle MIL missile vibration requirements.
- For complete technical data, refer to latest issue of Sprague Engineering Bulletins 3700 and 3700.2.

SPRAGUE CAPACITORS

TYPE 146D SINTERED-ANODE TANTALEX® CAPACITORS

- Miniature commercial/industrial tantalum capacitors with reliable elastomer seal for use on printed wiring boards, in packaged circuit modules, and other applications where space is at a premium.
- TFE-fluorocarbon elastomer high-temperature seal with thermo-setting epoxy resin end-fill provides improved mechanical strength.
- Designed for continuous operation over temperature range of −55 C to +85 C.
- Special construction offers outstanding resistance to temperature cycling and provides trouble-free application when flow-soldering to printed wiring boards.
- Excellent stability of all electrical parameters, even after severe high temperature testing (85 C for 1000 hours at rated voltage).
- Metal-encased, with outer plastic-film insulation.
- For complete technical data, refer to latest issue of Sprague Engineering Bulletin 3751.

SPRAGUE CAPACITORS

TYPE 137D HERMETICALLY-SEALED GELLED-ELECTROLYTE SINTERED-ANODE TANTALEX® CAPACITORS

- Glass-to-metal Hermetic Seal Makes Type 137D Capacitors Especially Well Suited For Use in Satellites and Other Space Equipment.
- Gelled-electrolyte For Optimum Performance Characteristics
- High Volumetric Efficiency Results in Space Savings
- Operating Temperature Range of —55C to +175C
- Available in Voltage Ratings From 6 WVDC Through 150 WVDC At 85C With Appropriate Derating For Higher Temperature Operation
- Capacitors Listed Below Have Outer Plastic Insulating Sleeve. For Units with Bare Case, End Catalog Number in 0 Instead of 2
- For Complete Technical Data, See Latest Issue of Sprague Engineering Bulletin Number 3703

SPRAGUE CAPACITORS

TYPE 138D HERMETICALLY-SEALED GELLED-ELECTROLYTE SINTERED-ANODE TANTALEX® CAPACITORS

- Improved reliability through use of a glass-to-tantalum true hermetic anode seal.
- New construction eliminates all internal lead welds while retaining the strength of conventional internal lead-welded parts.
- Capacitor construction also offers outstanding resistance to extensive temperature cycling.
- Designed to meet or exceed environmental and life test requirements of MIL-C-39006.
- Gelled-electrolyte gives premium performance for all capacitor parameters with respect to frequency and temperature variations.
- Capacitance values ranging from up to 1200 µF at 6 WVDC to 47 µF at 150 WVDC.
- Standard capacitance tolerances, ±20% and ±10%. See (†).
- Rated for 85 C operation, and can be operated up to 125 C with appropriate voltage derating.
- For complete technical data, refer to latest issue of Sprague Engineering Bulletin 3704.

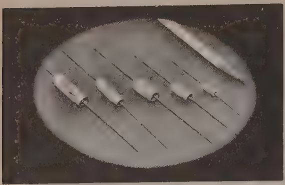
SPRAGUE CAPACITORS

MIL-C-3965 HERMETICALLY-SEALED GELLED-ELECTROLYTE SINTERED-ANODE TANTALEX® CAPACITORS—TYPE CL66 & CL67



- Glass-to-Metal Hermetic Seal Makes These Capacitors Especially Well-Suited For Use In Satellites and Other Applications Requiring The Benefits of true Hermetic Sealing
- May Be Operated At Temperatures Up To 175C
- Extremely low leakage Current
- Military Version Of Well-Known Sprague Type 137D
- Capacitors Listed Here Have Capacitance Tolerance Of ±10%. For ±5% Capacitors, Change 10th Character In MIL Type No. From K To J. For ±20% Capacitance Tolerance, Change K To M

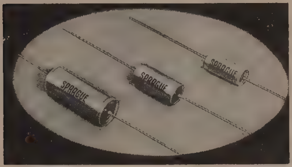
SPRAGUE CAPACITORS

ESTABLISHED RELIABILITY MIL-C-39006
STYLE CLR65 SINTERED-ANODE TANTALUM CAPACITORS



- Handled by Sprague and Sprague industrial distributors in full compliance with MIL-STD-790. Manufactured, marked, packed, shipped, received, inspected, stored in separate area, free from contamination or mix-up with other components.
- Rated for operation to 85 C (to 125 C with voltage derating.)

SPRAGUE CAPACITORS

TYPE 500D MINIATURE METAL-CASE ALUMINUM 'LYTICS

- Industrial quality at moderate prices.
- Excellent low Temperature operation
- All-welded construction — no pressure joints to cause open or intermittent circuits.
- Withstand high surge voltages
- Long shelf life, extremely low leakage current
- Will withstand 1000 hr. life test at rated voltage and 85 C.
- High capacitance in ultra-small physical size
- Furnished with plastic outer insulating sleeves
- For complete technical data, see latest issue of Sprague Engineering Bulletin 3149.

TYPE WH11D AXIAL-LEAD ECONOMY ELECTROLYTICS

- Made in Hong Kong by Sprague World Trade Corp.
- Operating temperature range, −20 C to +85 C.
- All-welded construction – no pressure joints to cause open or intermittent circuits.
- Low leakage current – means minimum drain and longer battery life in bypass circuits.
- Also excellent as coupling capacitors.
- For complete technical data, refer to latest issue of Sprague Engineering Bulletin 3148.

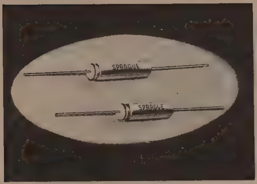
SPRAGUE CAPACITORS

TYPE TE LITTL-LYTIC® ELECTROLYTICS



- Compare! These ultra-small capacitors will withstand a 2000 hr. life test at rated voltage and maximum operating temperature of 105 C.
- Extremely low d-c leakage current, low dissipation factor, high capacitance stability, even after severe high temperature shelf testing.
- Proven dependable performance in industrial as well as entertainment equipment with either transistor or modified electron-tube circuits.
- All terminal connections are welded, eliminating possibility of "open" or intermittent contacts occasionally found in pressure joints of conventional capacitors.
- Ultra-low leakage current
- Metal-encased, with clear plastic outer insulating sleeves.
- For complete technical data, see latest issue of Sprague Engineering Bulletin 3150.

SPRAGUE CAPACITORS

TYPE TVA ATOM® ELECTROLYTICS

- Whether for TV sets, ac/dc sets, auto radios, home radio-phono combinations, or other electronic equipment, the ATOM line will handle most tubular electrolytic capacitor requirements.

- The smallest dependable standard tubular—capacitors up to 475 volts operate at temperatures to 85°C (185°F). Higher voltage capacitors are designed for 65°C operation.
- Low leakage current, low dissipation factor, long shelf life.
- Will withstand high temperatures, high ripple currents, high surge voltages.
- Metal case construction with thermoplastic outer insulating sleeve except as noted by dagger (†) sign.
- Catalog numbers with TVAN prefix are non-polarized, and are ideal for speaker crossover networks. They are listed on 2nd following page.
- Starred (★) items have metal mounting strap attached, as shown in photo.

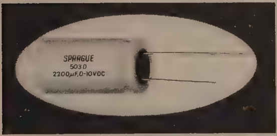
TYPE 503D VERTI-LYTIC® MINIATURE ELECTROLYTICS



- Made in Hong Kong by Sprague World Trade Corp. to meet the demand for low-cost capacitors in high-density applications.
- Metal-encased, with plastic insulating sleeve.
- Designed for 85 C operation.
- Excellent capacitance stability and ESR.
- Low leakage current.
- For complete technical data, refer to latest issue of Engineering Bulletin 3153.

SPRAGUE CAPACITORS

TYPE TVL TWIST-LOK® ELECTROLYTICS

- Capacitors to 475V Operate up to 85 C (185 F). Higher Voltage Units Designed for 65 C
- Withstand High Surge Voltages
- Etched Cathode Construction. Ideal for High Ripple Selenium Rectifier Circuits
- Can be Mounted "Above Ground" Using Phenolic Mounting Plate and Insulating Tube
- Units Noted by † Sign are Exact Replacements for Color TV
- Catalog numbers with a TVLP Prefix Indicate Units with a Common Positive.

For a more complete line of over 600 Type TVL Capacitors, refer to Sprague Catalog C-563.

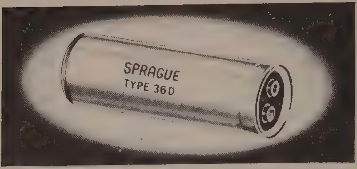
†Exact replacement for Color TV

Sizes subject to change without notice.

SPRAGUE CAPACITORS

TYPE 36D POWERLYTIC® ALUMINUM ELECTROLYTICS



RECOMMENDED FOR REPLACEMENT APPLICATIONS

- Excellent space economy at operating temperatures to 85 C.
- Uses most reliable seal developed by Sprague for aluminum 'lytic capacitors.
- Low ESR, low leakage currents.
- Pressure-type safety vents employing silicone rubber are used on all cases.
- Extremely long shelf life.
- For technical data, refer to Sprague Engineering Bulletin 3431.

*Capacitors listed have outer plastic-film insulation. For bare case, change 13th character of cat. no. from "2" to "0" and subtract .078" from diameter and .125" from length. Capacitors listed have low-insert terminals. For high-insert or solder-lug terminals, change last character of cat. no. from "A" to "B" or "C," respectively.

TYPE 36DX POWERLYTIC® ALUMINUM ELECTROLYTICS

RECOMMENDED FOR NEW EQUIPMENT DESIGNS

- Have extended capacitance ratings (higher capacitance, smaller cases) required in new designs.
- Capacitors listed have outer plastic-film insulation. For bare case, change 14th digit of Cat. No. from "2" to "0". Capacitors listed have low-insert terminals. For high-insert or solder-lug terminals, change last letter from "A" to "B" or "C" respectively.

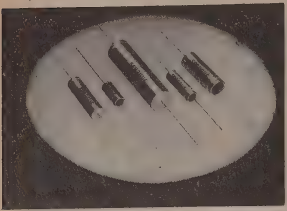
SPRAGUE CAPACITORS

TYPE 39D POWERLYTIC® ELECTROLYTIC CAPACITORS



Designed for applications which require the greatest possible capacitance in small physical case sizes.

- Type 39D capacitors supplement the original Type 36D Can-type Powerlytic line by offering high-capacitance units in axial-lead tubular configuration.
- Welds at all critical anode and cathode terminals eliminate riveted or pressure connections to assure freedom from open circuit even during operation in the microvolt or millivolt signal range.
- Improved molded phenolic end seals.
- Furnished with outer plastic insulating sleeve.
- Operating temperature range, − 20 C to +85 C.
- These capacitors are provided with a pressure-sensitive safety vent.
- Low ESR, low leakage currents.
- Service life, 10 yrs. or more in normal circuit applications.
- For complete technical data, see latest issue of Sprague Engineering Bulletin 3415.

SPRAGUE CAPACITORS

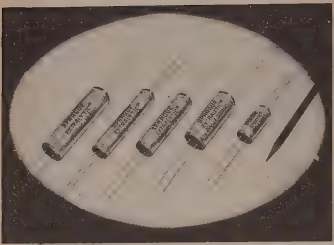
TYPE 604D 4-TERMINAL EXTRALYTIC® ALUMINUM ELECTROLYTIC CAPACITORS



- Premium-grade capacitors with true four-terminal construction, specifically designed for use in switching regulators and other high frequency applications.
- Low equivalent series resistance, low inductance, low impedance.
- Operating temperature range, −55 C to +105 C.
- Guaranteed inductance limit of 2 nH, with typical values of less than 1nH when used in the four-terminal mode.
- Impedance limits at 10 kHz are as low as 17 mΩ.
- Capacitance tolerance: 5- through 50-volt capacitors, −10 +50%. Above 50 volts, −10 +75%.
- Outer plastic film insulation with polymer-coated end seals which permit degreasing in halogenated solvents.
- For complete technical data, refer to latest issue of Engineering Bulletin 3458.

SPRAGUE CAPACITORS

TYPE 672D EXTRALYTIC® ALUMINUM ELECTROLYTICS

- Specifically designed for use in switching regulators and other high frequency applications.
- Miniature single-ended 'lytics feature low equivalent series resistance, inductance, and impedance.
- High capacitance values combined with low inductance and low ESR limits makes these capacitors very useful for bus bar decoupling in data processing applications.
- Premium-grade capacitors offer guaranteed inductance limit of 20nH with typical values of less than 10nH.
- Furnished with outer plastic-film insulation with supplementary polymer coated end-seal.
- Capacitance tolerance, −10, +100%.
- Operating temperature range, −55 C to +105 C.
- For complete technical data, refer to latest issue of Sprague Engineering Bulletin 3452.

TYPE 432D COMPULYTIC® ALUMINUM ELECTROLYTICS

- Revolutionary electrolytic capacitors for ultra-low-impedance applications.
- Impedance limits at 10 kHz are as low as .001 ohm, with typical values of only half the specified limits.
- Special strip-line terminals are ideal for use with laminated-bus power distribution systems found in modern EDP equipment.
- Stacked-foil construction allows capacitance values to 100,000 µF with extremely low ESR of typically less than .001 ohm and inductance of only 1 nH.
- Operating temperature range, −40 C to +85 C.
- For complete technical data, refer to latest issue of Sprague Engineering Bulletin 3443.

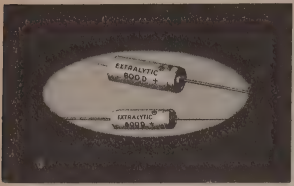
SPRAGUE CAPACITORS



TYPE 600D EXTRALYTIC® ALUMINUM ELECTROLYTIC CAPACITORS

- Extended Operating Temperature Range From —55C to +125C
- Industrial version of CU12 and CU13 units
- Dual Rating Makes Possible Operation At Either 85C or 125C
- Voltage Ratings Up to 250 Volts D-C
- Improved Oxide Systems, Etching Techniques, and End Seals; a New Electrolyte Makes The Type 600D Equivalent to Or Better Than Comparable Foil Tantalum Capacitors.
- Lower Cost and One Third The Weight of Comparable Foil Tantalums

For Complete Technical Data, See Latest Issue of Sprague Engineering Bulletin 3455.

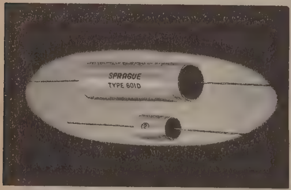
---

†Catalog numbers listed are for capacitors with Outer Insulation. For units with bare can substitute "0" for "4" at the end of the catalog number, and subtract 1/64" from diameter and 1/16" from length.



TYPE 601D EXTRALYTIC® ALUMINUM ELECTROLYTIC CAPACITORS

- Supplement 600D With Higher Capacitance
- Industrial version of CU16 and CU17 units
- Pressure-sensitive Safety Vent
- Designed to Operate at a Temperature Range of —55C to +85C
- Unique New Electrolyte, High-gain Etched Foil, Improved Oxide System Provide Long Life With Superior Electrical Characteristics
- For Complete Technical Data, See Latest Issue of Sprague Engineering Bulletin 3456

SPRAGUE CAPACITORS

TYPE 602D EXTRALYTIC® ALUMINUM ELECTROLYTIC CAPACITORS

- Large Cylindrical Power Supply Filter Capacitors With Exceptional Performance Over Long and Trouble-free life
- High Ripple Current Capability
- Designed For Continuous Operation Over Temperature Range of —55 C to +85 C
- Extremely Useful on Input of Power Supply Filters, as They Will Safely Carry as Much as 10 amps of Ripple Current at 120 Hz
- Superior Humidity Seal
- For Complete Technical Data, See Latest Issue of Sprague Engineering Bulletin 3457

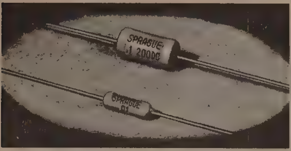
SPRAGUE CAPACITORS

TYPE 192P PACER® FILMITE® 'E' CAPACITORS



- Completely New Construction — Extended Foil Film Sections Terminate in End Caps with Wire Leads Assuring Best Possible Non-inductive Section.
- Controlled Dimensions Permit Use of Automatic Insertion Equipment for Installing Pacer Capacitors on Printed Wiring Boards.
- Entire Assembly Protected by Orange Heat Shrinkable Mylar Sleeve.
- Pacers are Wound with Ultra-thin Polyester Film Dielectric and Thin Gage Foil under Controlled Atmospheric Conditions.
- Rated for Operation from −55 C to +85 C (−67 F to +185 F).
- Capacitance Tolerance: ±10%.
- For complete data, see Engineering Bulletin 2066.

TYPE DF METALLIZED FILM ORANGE DROP® CAPACITORS

SPRAGUE
SPRAGUE
SPRAGUE
SPRAGUE

- Fit Easily into Tight Spots Because They're Smaller Than Other Types of Comparably-Rated Capacitors
- Extremely High Insulation Resistance Insures Peak Performance At Temperatures Up to +85C (185F)
- Radial Leads Are Extra Long For Point-to-Point Wiring and Crimped For Printed Board Insertion
- Double Dipped in Orange Epoxy Resin For Protection Against Heat And Humidity
- Capacitance Tolerance: ±10%
- Same as Sprague O.E.M. Type 277P
- For Complete Data, See Latest Issue of Sprague Engineering Bulletin 2040.

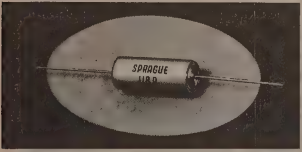
118P DIFILM® METALLIZED CAPACITORS



- Best of their type possible to produce at the present state of the art
- Rated for operation at 125°C WITHOUT VOLTAGE DERATING.
- Unique dual dielectric — a combination of metallized paper and of polyester film, impregnated with high-temperature mineral wax.
- May be used at extremely low voltages where metallized paper construction has previously been unsatisfactory.
- Capacitors listed below are ungrounded case (insulated section) units without outer insulating sleeves. For information on other styles consult your Sprague Industrial Distributor.
- For units with insulating sleeves, change last digit from "2" to "4."
- Cap. Tolerance ±10%. For ±20% units, change 8th digit from "9" to "0."
- For complete data, see latest issue of Engineering Bulletin 2211.

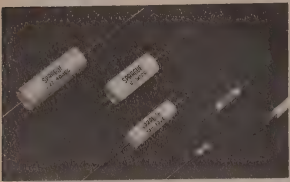
SPRAGUE CAPACITORS

TYPE 416P YELLOW JACKET® FILMITE® 'E' CAPACITORS



- Economy-priced for commercial applications. Made in Taiwan by Taiwan Sprague Corp.
- Extended-foil construction.
- Protected against moisture by outer wrap of polyester film and plastic resin end seals.
- Light-weight capacitors of minimum size.
- Rated for −55 C to +85 C operation (to +105 C with voltage derating).
- High insulation resistance.
- For complete technical data, refer to latest issue of Engineering Bulletin 2063C.

TYPE 260P METALLIZED FILMITE® 'K' CAPACITORS

- Designed for applications such as low-frequency tuned circuits, analog computer reference capacitors and precision timing and integrated circuits.
- High insulation resistance, high stability, minimum capacitance change with temperature, low dielectric absorption, low dissipation factor.
- Capacitor sections are of non-inductive construction.
- Will operate at full rated voltage over the temperature range of −55 C to +105 C.
- Capacitance tolerance, ±5%.
- Voltage rating, 200 WVDC.
- For complete technical data, refer to latest issue of Engineering Bulletin 2705.

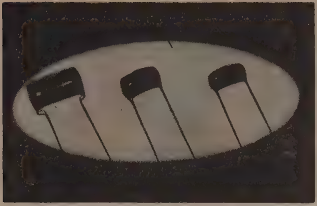
SPRAGUE CAPACITORS

TYPE 225P FILMITE® 'E' ORANGE DROP® CAPACITORS



- Designed specifically for printed wiring board applications and are furnished with radial leads to facilitate insertion on boards.
- Find wide application in television receivers, radio sets, and commercial electronic equipment.
- Designed for operation at temperatures to 85 C.
- Capacitor sections are wound from polyester film and thin-gage foil under carefully controlled atmospheric conditions.
- Protected against moisture by a wax-free conformal coating of epoxy.
- Capacitance tolerance, ±10%.
- For complete technical data, refer to latest issue of Sprague Engineering Bulletin 2062.

TYPE 418P ORANGE DROP® FILMITE® 'E' CAPACITORS

- Widely used in TV, radio, and allied commercial equipment.
- Combine excellent electrical characteristics, compactness, and low cost.
- "Hockeystick" crimped radial-lead design for easy insertion on printed wiring boards.
- Wound with polyester film and thin gage foil under carefully controlled atmospheric conditions.
- Protected against moisture by wax-free conformal coating of epoxy.
- Designed for operation at temperatures to 85 C.
- May be operated to 125 C with voltage derating.
- Capacitance tolerance, ±10%.
- For complete technical data, refer to latest issue of Sprague Engineering Bulletin 2062.

TYPE 431P METFILM® 'E' CAPACITORS

- Unique Construction Gives Definite Space Advantages Over Metal-Encased, Molded, or Wax-Coated Cardboard-Case Tubulars of Comparable Ratings.
- Axial-Lead Polyester-Film Capacitor Section Protected Against Moisture By An Outer Wrap of Polyester-Film Tape.
- An Improved End Seal of a Plastic Resin Which Bonds With the Film Wrap and the Tinned Leads Provides Superior Humidity Resistance.
- Because of Their Small Size, These Capacitors Are Particularly Well-Suited For Potting or Encapsulating in Electronic Sub-Assemblies.
- For Complete Technical Data, Refer to The Latest Issue of Sprague Engineering Bulletin 2445.
- Call Your Sprague Industrial Distributor For Current Quantity Prices.

SPRAGUE CAPACITORS

ORANGE DROP® DIPPED TUBULARS

SPRAGUE
6PS

- Widely Used in TV, Radio and Allied Commercial Equipment
- Crimped Wire Leads for Correct Spacing When Mounted On Printed Wiring Boards.
- Outside Foil on All Units Identified by Black Striping
- Double Dipped in Bright Orange Epoxy Resin—Beats Heat and Humidity
- Won't Leak or Drip
- Capacitance Tolerance, ±10%

TYPE 279P* ISOFARAD® PLASTIC FILM CAPACITORS

- Isofarad Quality is a Must in Color TV Synchroguide Circuits, Horizontal and Vertical Oscillators, Bridge and Parallel-T Circuits and Other Tuned Circuit Applications Requiring Close Tolerance and Zero Temperature Coefficient of Capacitance
- Superior to Silvered Mica Capacitors, Yet Less Expensive
- Constant Capacitance Will Not Change More Than ±0.2% from Room Temperature to +80 C at a Maximum Rated Voltage. Will Withstand Operating Temperatures to 85 C (185 F)
- Capacitance Tolerance: ±5%
- For complete data, see latest issue of Engineering Bulletin 2071

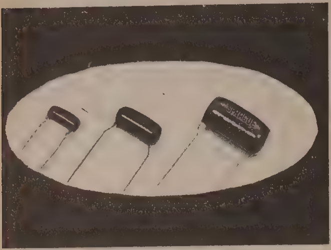
SPRAGUE CAPACITORS

TYPE 715P FILMITE® 'L' ORANGE DROP® DIPPED TUBULARS



- Polypropylene film capacitors similar to polystyrene units with their high a-c current-carrying capability, but have added advantage of operating temperatures to 105 C and extremely low dissipation factor.
- Ideal for applications where high a-c current flow is found, as in certain solid-state TV vertical circuits, r-f generators, and pulse-forming networks.
- Exhibit capacitance change of less than 3% over entire operating temperature range.
- Temperature coefficient is negative and virtually linear at 180 ppm/°C over the temperature range of +25 C to +105 C, making capacitors suitable for matching with positive TC resistors and inductors to maintain circuit stability.
- Conformally coated with flame-retardant epoxy which also provides protection from humidity and mechanical damage.
- Capacitance tolerance, ±5%.
- Furnished with 1.250" long "hockeystick" crimped leads.
- For complete technical data, refer to latest issue of Engineering Bulletin 2090.

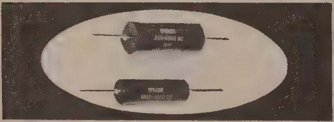
TYPE 185P HIGH-VOLTAGE TELECAP® DIFILM® CAPACITORS



- Minimize corona in high-voltage circuits.
- Axial-lead premolded cases are rugged and non-flammable.
- Capacitance tolerance, ±10%.
- Higher ripple voltage capability than conventional extended-foil non-inductive capacitors.
- For complete data, see latest issue of Engineering Bulletin 2011.

SPRAGUE CAPACITORS

TYPE CP53 CAPACITORS TO MIL-C-25

- Impregnated with specially processed mineral oil to exceed performance requirements of MIL-C-25A
- Hermetically sealed, with silicone rubber compression terminals
- Rated for—55°C to +85°C operation
- Drawn metal cases have mounting flanges as integral part of containers
- Single and dual capacitance units have insulated sections—triple capacitance units have grounded cases

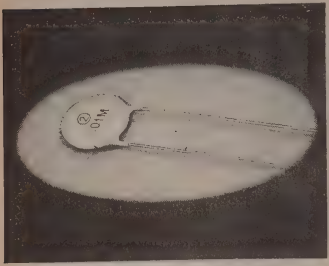
SPRAGUE CAPACITORS

CERA-MITE® CERAMIC CAPACITORS



- Tiny, Tough, Dependable In Every Application
- Low Self-Inductance Of Silvered Flat-plate Design Means Very High By-pass Efficiency In All TV Circuits
- Flat-plate Construction Permits Higher Self-resonant Frequency Than Tubular Ceramic Or Molded Mica Capacitors
- Tough Moisture-proof Coating Protects Against Short-circuiting And Assures Good Performance Under Severe Conditions Of Humidity And Vibration
- Cera-mite Capacitors Easily Fit Into Tight Spaces, Even Across Subminiature Tube Sockets
- Designed For 85C (185F) Continuous Operation

Call your Sprague Industrial Distributor for Current Quantity Prices

GENERAL APPLICATION TYPES

- Excellent Where Temperature Coefficient Is Not Important, Such As By-pass and Coupling Applications in IF and RF Circuits
- EIA Designation: 5GA=Z5U, TG=Z5U
- Low Cost, Smallest Size 1 kV General Application Type Available
- Same Characteristics Available In High Voltage Ratings At Low Cost

1000 WVDC ±20% Tol.

HIGH-K TYPES

- Designed for By-Pass and Coupling Applications Where Additional Capacitance Will Not Affect Circuit Operation
- Smallest Physical Size
- EIA Designation: 5HK=Z5U
- 5HKS-S10 thru 5HK-P10, **500 WVDC,** Capacitance Tolerance: +80 —20%
- All Other 5HK are **1000 WVDC,** Capacitance Tolerance: GMV

SPRAGUE CAPACITORS

CERA-MITE® CERAMIC CAPACITORS, continued

FREQUENCY-STABLE TYPES

- Better Stability Than the General Application Types.
- Ideal for Replacing Other Types of Capacitors Such as Molded Micas, Paper Tubulars, and Mylar Film Tubulars
- Available in IKV and a Smaller Size 250 Volt Rating
- Tighter Tolerance of ±10% is Better Than General Application Types
- Small Size, Low Cost
- EIA Designation: 10SS=Z5P, 2SS=Z5P

SEMI-STABLE 250 WVDC STANDARD TOLERANCE ±10%

SPRAGUE CAPACITORS

CERA-MITE® CERAMIC CAPACITORS, continued

TEMPERATURE-COMPENSATING AND NPO TYPES

- Zero Temperature-coefficient Capacitors used Where Capacitance Change with Temperature is Undesirable
- Superior to Silvered-mica Types in Stability, High "Q", and IR
- Eliminate oscillator drift in TV, FM, VHF and AM receivers
- Negative Temperature Coefficient is 30 ppm/°C for N030 types, 80 ppm/°C for N080 types, 150 ppm/°C for N150 types, 220 ppm/°C for N220 types, 330 ppm/°C for N330 types, 470 ppm/°C for N470 types, 750 ppm/°C for N750 types, 1500 ppm/°C for N1500 types and 2200 ppm/°C for N2200 types.
- Capacitance Tolerance: 12 pF & up, ±5%; 10 pF & below, ±0.5 pF
- Rated at 1000 WVDC
- For use in Tuned Circuits
- Temp-compensating Types Have a Linear Negative Coefficient Curve
- Available in Standard 5% Decade Values.

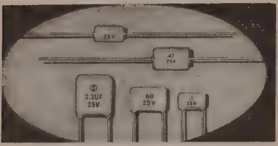
SPRAGUE CAPACITORS

1C, 2C, 3C, 4C, and 5C MONOLYTHIC® CERAMIC CAPACITORS



- Proven Reliable in Wide Usage Over Many Years of Exacting Service.
- Available in a Variety of Body Formulations, Capacitance Values, and Sizes.
- Made By Spraying Alternate Layers of Ceramic Dielectric Material and Metallic Electrodes, then Firing Into a Single, All But Indestructible Homogeneous Block.
- Protected Against Mechanical Damage and Moisture by a Tough Resin Coating.
- For Complete Technical Data, See Latest Issue of Engineering Bulletin 6201.

Call Your Sprague Industrial Distributor
For Current Quantity Prices

NOTE: Capacitors listed in this section have radial leads. For axial-lead units, change "C4" or "C5" at end of Cat. No. to "B1."

TEMPERATURE CHARACTERISTICS

Formulation	Temp. Range	Max. Change over Temp. Range
NPO	−55C to +125C	NPO ±60 ppm/°C
N030	−55C to +125C	−30 ±30 ppm/°C
N750	−55C to +125C +25C to + 85C	meets MIL-C-20 Char. UJ −750 ±120 ppm/°C
X7R	−55C to +125C	±15%
Z5U	+10C to + 85C	+22, −56%

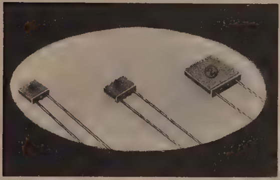
TYPE 7C MONOLYTHIC® CERAMIC CAPACITORS



- All Capacitors Listed Rated at 50 WVDC.
- New Phenolic Terminal Base With Stand-Off "Feet" Provides these Advantages: No Resin Run-Down on Leads; Uniform Lead Spacing; No Dirt and Moisture Entrapment; Degreasing Fluid Flows Freely Between Capacitors and Board.
- Made by Spraying Alternate Layers of Ceramic Dielectric Material and Metallic Electrodes, Firing into a Homogeneous block, then Coating with a Tough Phenolic Resin.
- For Complete Technical Data, See Latest Issue of Engineering Bulletin 6202.

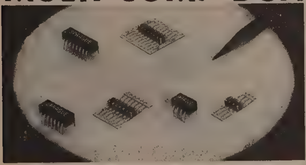
MULTI-COMP® DUAL IN-LINE MONOLYTHIC® CERAMIC CAPACITORS



- Monolithic construction — made by depositing alternate thin layers of metallic electrodes and ceramic dielectric material, then firing into an all but indestructible solid homogeneous block, which is molded in a tough plastic DIP package.
- Multiple-section units with 8, 14, and 16 leads.
- Rated at 100 WVDC over the operating temperature range of −55 C to +70 C.
- Capacitance tolerance, ±20%.
- For complete technical data, see latest issue of Engineering Bulletin 6242.

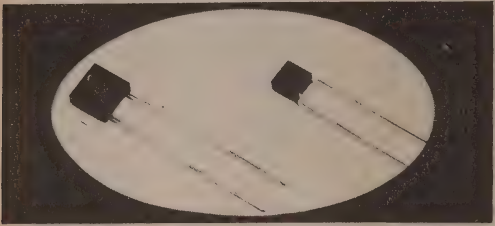
SPRAGUE CAPACITORS

ESTABLISHED RELIABILITY MIL-C-39014

STYLE CKR05 and CKR06 MOLDED CERAMIC CAPACITORS



- Handled by Sprague and Sprague industrial distributors in full compliance with MIL-STD-790. Manufactured, marked, packed, shipped, received, inspected, stored in separate area, free from contamination or mix-up with other components.

- Ceramic dielectric, molded case. Operating temperature range, −55 C to +125 C.
- General purpose – for use in applications where appreciable variations in capacitance with respect to temperature, voltage, frequency, and life can be tolerated.
- EIA temperature characteristic X7R, MIL characteristic BX.
- Case insulation will withstand 150% of d-c rated voltage.
- Lead spacing, .200″
- "L" failure rate (2%).
- For complete technical data, refer to latest issue of Engineering Bulletin 6251.7.

SPRAGUE CAPACITORS

HYPERCON® CERAMIC DISCS

SPRAGUE
HY-150

- Superior to electrolytic capacitors of similar capacitance values due to very low power factor.
- Ultra-miniature . . . ideal for use in transistorized circuitry.
- For bypass and coupling, but particularly well-suited for any low-voltage use where high capacitance and low power factor are important.
- Capacitance tolerance: For catalog numbers ending Y . . . . +50, −20% . . . . For catalog numbers ending in Z . . . +80, −20%.
- For complete technical data, see latest issue of Engineering Bulletin 6141.

HIGH-VOLTAGE DOORKNOB CERAMICS

- For Bypass, Arc Suppression and Other High-Voltage Applications
- 20DK-T5 Comes Complete with 7 Terminals, as illustrated. (Packaged 2 per Plastic Box, with 14 terminals)
- 30DK-T5 is Supplied with 2 Terminals, as per Style Marked "A"
- Capacitor Body has Female Threads for interchangeable Screw-in Terminals

Call Your Sprague Distributor for Current Prices

- Cast in Non-Flammable, Moisture-resistant, Epoxy Resin

TYPE 424M* DIPPED MICA CAPACITORS

- Expressly Made for Applications Requiring Optimum Capacitance Stability and Retrace Characteristics.
- Designed For Continuous Operation at Temperatures Up to +85 C.
- Not Affected by High Relative Humidity.
- Critically-Tested Mica Dielectric With "Fired-On" Silver electrodes.
- Special Electrode Terminations to Minimize Capacitance Drift and Internal Noise.
- Resin-Impregnated Multiple Phenolic Coating for High Moisture Resistance and Mechanical Strength.
- Capacitance Tolerance, ±5%.
- For Complete Technical Data, See Latest Issue of Engineering Bulletin 1015.

SPRAGUE CAPACITORS

TYPE MW and CM04/5/6 DIPPED MICA CAPACITORS

- Excellent electrical characteristics at low cost.
- For applications such as timing circuits and tuning circuits, where good capacitance stability and retrace are required.
- Operating temperature range: −55 C to +125 C.

- Multiple dipped coatings of phenolic and epoxy resins for high moisture resistance.
- Rated for operation at voltages to 500 WVDC.
- Capacitance tolerance: thru 10pF, ±½pF; 12 pF and above, ±5%.

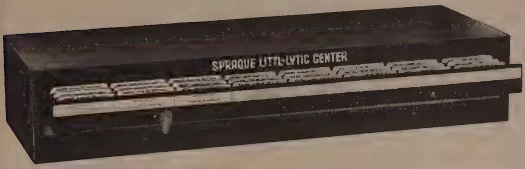
SPRAGUE CAPACITORS

CAPACITOR SERVICENTERS in steel cabinets



- Custom-designed to put popular-rated capacitors at your fingertips.
- Capacitors 'filed' in compartmented drawers outfitted with pre-printed index cards.
- Rugged yet attractive . . . constructed of heavy-gage steel, finished in baked blue enamel.
- J-150 contains 795 disc ceramics. J-141 contains 200 miniature axial-lead tubular electrolytics. J-152 contains 392 single-ended electrolytics.

J-150 CERAMICENTER®

(See Sprague Cera-mite® Capacitor pages for detailed information on these capacitors)

SPRAGUE-GOODMAN CAPACITORS

PISTONCAP® PRECISION TRIMMER CAPACITORS

- Low Loss Glass or Quartz Dielectric.
- Fully Interchangeable with JFD and Erie.
- Simplified Long Life, Reliable Adjust Mechanism.
- High Stability Under Conditions of Changing Frequency, Voltage, Temperature, etc.
- Dielectric Strength, Twice Rated Voltage.
- Driving Torque, 1 to 10 ounce-inches.
- Insulation Resistance, 10^6 Megohms at +25 C. (See Temperature Table for IR at Peak Temp.)
- Standard Sealed and Expanded Range Sealed Types Use Latest Design of Multi-lobed Seal at Adjust End.
- Types GER, GFR, GEL, and GFL Employ Embedded Electrode Construction for Expanded Capacitance Range.

MIL-C-14409C CAPACITORS

Sprague-Goodman is an approved supplier of the following Series:

SPRAGUE-GOODMAN CAPACITORS

MINIATURE CERAMIC TRIMMER CAPACITORS

- Printed Circuit Mounting Type
- Compact Form Factor Conserves Mounting Space
- Straight Line Capacitance Curve
- Low Cost for Industrial and Commercial Applications
- Variety of Mounting Configurations
- Snap Fit in Printed Circuit Board

- Operating Temp. Range: −55°C to +85°C
- Voltage Rating: 250 Volts D-C
- Dielectric Strength: 500 Volts D-C
- Insulation Resistance: 10^3 Megohms Min. at +25°C
- Driving Torque: 0.5 to 2.5 ounce-inches (Types A-F) 0.4 to 2.0 ounce-inches (Type G)

SPRAGUE A-C CAPACITORS

TYPE AB MOTOR-STARTING ELECTROLYTIC CAPACITORS

- Designed for intermittent duty cycles in motor-starting applications.
- Housed in molded phenolic cases for protection against moisture, dirt, and grease. Will not deteriorate in humid atmosphere, as is often the case with cardboard-encased capacitors.
- Universal terminals for use with quick-connect connectors. Terminals also have notches and eyes for wrapping leads if connections are to be soldered.
- Operating temperature range, −30°C to +65°C.
- Only a single end cap and clip-type bracket are needed for easy mounting on any modern motor.
- 2 clip-on terminal adapters included with each capacitor, for attaching lead wires without soldering.

TYPE OV OVAL-CASE MOTOR-RUN CAPACITORS

- Impregnated with non-flammable synthetic askarel liquid which has low power factor, high dielectric constant, high dielectric strength.
- Mechanically rugged construction — will withstand severe motor vibration. Drawn metal case eliminates danger of leaky soldered seams.
- Terminals mechanically linked by molded phenolic dual insulating cup, which prevents individual terminals from turning and forms a leak-proof seal.
- Universal terminals for use with female quick-connect terminations found on wiring harnesses. Terminals also have notches and eyes for wrapping leads if connections are to be soldered.
- T after cat. no. means internally-fused unit.

SPRAGUE A-C CAPACITORS

TYPE OR RECTANGULAR-CASE MOTOR-RUN CAPACITORS

- Higher capacitance values than are usually found in oval or cylindrical units.
- Non-flammable synthetic askarel liquid impregnant is derived from halogenated aromatic hydrocarbons. This askarel impregnant has low power factor, a high dielectric constant, and high dielectric strength.
- Drawn seamless case eliminates the danger of leaky soldered seams. Double-rolled edges of cover closure protect against 'popouts' and assure an extremely reliable seal between cover and can.
- Special terminal construction. The two terminals are mechanically linked by a molded phenolic dual insulating cup. This 'dogbone' shaped bushing prevents individual terminals from turning and, forms a reliable leakproof seal.
- Internally fused units have (T) suffix in Cat. No.

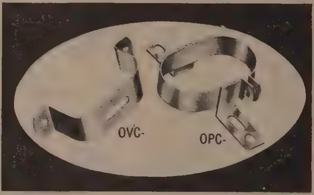
SAFETY BOOTS FOR TERMINALS OF MOTOR-RUN CAPACITORS

Oil-resistant neoprene rubber covers for terminal assemblies of Type OV and Type OR Clorinol® capacitors, a safety feature especially desirable in appliance applications.
For single-section capacitor, use one boot. For triple-section capacitor, two boots are required.

Catalog Number..................................RG-1

MOUNTING CLAMPS FOR TYPE OV CAPACITORS



- For oval capacitors.
- Plated steel.

MOUNTING PLATES

For use with Twist-Lok® capacitors

Cat. No.	Description
36-17	Metal, for 1″ D. capacitor
36-18	Metal, for 1 3/8″ D. capacitor
36-19	Phenolic, for 3/4″ D. capacitor
36-20	Phenolic, for 1″ D. capacitor
36-21	Phenolic, for 1 3/8″ D. capacitor

PRINTED WIRING BOARD ADAPTERS

Used on terminals and lugs of twist-prong-type units so that capacitors may be mounted on printed boards. Eight adapters per package, complete with instructions.

Package of 8....Cat. No. PC-8

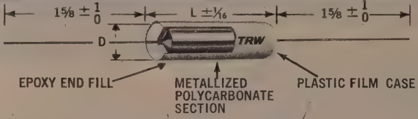
TRW® CAPACITORS

METALLIZED POLYCARBONATE

DIELECTRIC
TYPE X463UW CAPACITORS
ULTRA-MINIATURE — FULL RATED

X463UW

- Fully Rated from −55°C to +125°C
- Low Capacitance Change With Temperature — Less Than 1½% from −55°C thru +125°C



Lead Gauge: 24 AWG 9/16 Length and Less
22 AWG 11/16 Through 13/16 Length
20 AWG 1 Through 1½ Length
18 AWG 1 13/16 Length and Greater

Dimensional Tolerances: Note: Diameters given in table below are nominal.

For Max. Dia. add the following:
.000 Thru .250 Dia. +.031
.251 Thru .350 Dia. +.047
.351 Thru .450 Dia. +.062
.451 Thru .550 Dia. +.094
.551 Thru .650 Dia. +.125
.651 Thru .750 Dia. +.156
.751 And Above Dia. +.188

Length: ±1/16

SPECIFICATIONS

Insulation Resistance: Minimum values according to Table I.

TABLE I

Temperature	+25°C	+85°C	+125°C
Megohms X Microfarads	60,000	6,000	600
Need Not Exceed (Megohms)	200,000	50,000	5,000

Measured after 2 minutes electrification at rated voltage.

Dissipation Factor: Less than 0.3% at 25°C when measured at or referred to 1000 ±20 Hz for capacitance values up to and including 10 mfd.

Dielectric Strength: Twice rated voltage for one minute through a limiting resistance of 100 ohms/volt.

Temperature Range: −55°C to +125°C with no voltage derating.

Humidity Resistance: No more than one failure allowed of 12 units tested when tested as outlined in MIL-STD-202C, Method 103B, Condition B, with 100 volts or rated voltage applied, whichever is less.

For Film-Foil Polycarbonate TRW Type 463UW is Available

TRW® CAPACITORS

METALLIZED POLYCARBONATE

DIELECTRIC
TYPE X440 CAPACITORS
MICRO-MINIATURE — LIGHT WEIGHT

X440

- **Minimum Possible Size — Lightweight**
- **Very Low Temperature Coefficient**
- **Fully Rated from −55°C to +125°C**
- **High Insulation Resistance**

.0047 MFD .056 MFD .1 MFD

ACTUAL SIZE

SPECIFICATIONS

Voltage Rating: 50 VDC from −55°C to +125°C.

Insulation Resistance: Greater than 500,000 megohms @ 25°C. Typical change of IR vs. Temp. is shown in the curve.

Dissipation Factor: Less than .3% at 1K Hz @ 25°C.

Capacitance Change with Temperature: a. Between 0°C and 125°C, as referenced to 25°C, capacity change will not exceed +½ −1½%.
b. TC of capacitance characteristic is 0 +50 −150 PPM/°C between 0°C and 125°C.

Dielectric Strength: 200% of rated voltage applied for 2 minutes through limiting resistance of 100 ohm/volt.

Life Test: Tested in accordance with Mil-C-27287, 250 hrs., 125°C @ 1.4 RV. IR greater than 70% of original requirement, DF less than .3%, cap. change less than 1%.

Humidity Resistance: Tested in accordance with Mil-C-27287, 40°C, 95% RH, 240 hours. IR greater than 10 gigaohms @ 25°C. DF less than .3%.

Lead Pull Test: 5 lbs. in any direction.

Construction: Metallized polycarbonate dielectric, non-inductive winding. Epoxy case with standoffs.

Leads: 24 gauge tinned solid wire on .2″ centers.

The X440 has been specifically designed to be a real help in the ever increasing problem of fitting components in today's miniaturized designs. Its absolute minimum size (precision dimensions and the close tolerance lead spacing permit space savings impossible before). Additionally, the highly superior electrical properties of polycarbonate are of immense value in modern high performance circuitry.

Standoffs on the bottom of the premolded case provide for rigid, secure mounting and facilitate cleaning of the printed circuit boards. Leads are uniformly and accurately spaced on .200″ centers.

TRW® CAPACITORS

METALLIZED POLYCARBONATE

DIELECTRIC
TYPE X482 - X483 CAPACITORS
HERMETICALLY SEALED — SUB-MINIATURE

X482
X483

- Fully Rated to 125°C
- Excellent Stability
- High Insulation Resistance
- Tolerances to ±1%

SPECIFICATIONS

Insulation Resistance: Minimum values according to Table I.

TABLE I

Temperature	+25°C	+85°C	+125°C
Megohms X Microfarads	100,000	15,000	1,000
Need Not Exceed (Megohms)	200,000	30,000	2,000

Measured after 2 minutes electrification at rated voltage.

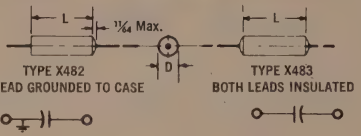
Dissipation Factor: Less than 0.30% when measured at or referred to 1000 ±20 Hz for capacitance values up to and including 10 MFD at 25 ±5°C.

Environmental Properties: Temperature and Immersion Cycling, Vibration, Moisture Resistance, and Shock to meet requirements of Mil-C-18312.

Tempeature Range: −55°C to 125°C with full rated voltage.

Dielectric Strength: Twice rated voltage (Terminal-to-Terminal) and Terminal-to-Case where case is not a terminal for 1 minute through a minimum resistance of 100 ohms/volt.

FOR FILM FOIL CONSTRUCTION TRW TYPE 482-483 IS AVAILABLE



Dimensional Tolerances: Diameter: +.015 −.005. Length: ±.031. Standard lead length 1 5/8 +1, −0.

Lead Gauge: 24 AWG .195 Diameter & Less
22 AWG .235 and .312 Diameter
20 AWG .400 Diameter & Greater

Insulated Cases: For insulated case sizes (Polyester Sleeve) add 1/16″ to unit length and .020 to diameter. Tolerance on unit size (with insulated sleeve) is as follows: Diameter ±.015 — Length ±.062

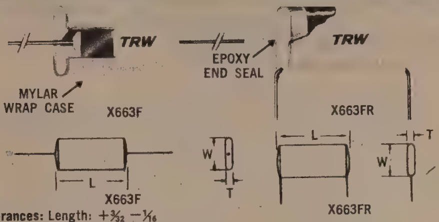
TRW® CAPACITORS

METALLIZED MYLAR* DIELECTRIC TYPE X663F - X663FR CAPACITORS FLAT FOR PREMIUM SPACE SAVINGS

X663F
X663FR

- High Insulation Resistance
- Self-healing
- Long Stable Life
- Axial or Radial Leads



SPECIFICATIONS

Insulation Resistance: Minimum values according to Table I.

TABLE I

Temperature	+25°C	+85°C	+125°C
Megohms X Microfarads	30,000	3,000	50
Need Not Exceed (Megohms)	30,000	3,000	50

Measured after 2 minutes electrification at rated voltage.

Dissipation Factor: Less than 1.0%, when measured at or referred to 1,000 ±20 Hz, for cap. values up to and including 1.0 mfd at 25 ±5°C. Except for units having a T. Dim. of .171 or less the D.F. shall not exceed 1.5%. Cap. values greater than 1.0 mfd measured at 60 ±6 Hz.

Temperature Range: −55°C to 100°; to +125°C with 50% derating; 50 volt capacitors full rated to 125°C.

Humidity Resistance: These designs comply with test requirements as outlined in MIL-STD-202C, method 103B, Condition B. IR no less than ⅓ minimum values listed in Table I.

Dielectric Strength: Twice rated voltage for one minute through a limiting resistance of 100 ohms/volt.

Capacitance Tolerance: Standard tolerance ±20%; also available in ±10%, and ±5%.

Tolerances: Length: +3/32 −1/16

Thickness or width: ±.031 up thru .218
±.046 on .219 thru .500
±.062 on .501 and greater

Lead Gauge: 24 AWG up to .203 thick.
22 AWG .204 thru .265 thick
20 AWG .266 thru .546 thick
18 AWG .547 thick and greater

Lead Spacing (X663FR Only): Center line to center line distance between leads shall equal nominal length of the capacitor plus 3/32 ±1/16 when measured .062 below body line.

Lead Length: Type X663F — 1⅝ +1, −0
Type X663FR — 1″ min.

TRW® CAPACITORS

METALLIZED MYLAR* & MYLAR* DIELECTRIC 601PE - X601PE

TYPE 601PE - 601CPE — X601PE - X601CPE CAPACITORS
SUB-MINIATURE IN A TOUGH RUGGED CASE

- **Dipped Epoxy Coating**

SPECIFICATIONS — 601PE - 601CPE

Insulation Resistance: Minimum values according to Table I.

TABLE I

Temperature	+25°C	+85°C	+125°C
Megohms X Microfarads	50,000	2,000	20
Need Not Exceed (Megohms)	100,000	5,000	100

Measured after 2 minutes electrification at 100 VDC or rated voltage, whichever is greater.

Dissipation Factor: Less than 1.0% when measured at or referred to 1000 ±20 Hz for capacitance values up to and including 1.0 mfd. at 25°C ±5°C. Capacitance values greater than 1.0 mfd. measured at 60 ±6 Hz.

Dielectric Strength: Twice rated voltage for 1 minute through 100 ohms per volt limiting resistance.

Humidity Resistance: These designs comply with test requirements per MIL-STD-202C, method 103B, Condition B, no voltage applied. Minimum resistance after test, 15,000 megohms.

Capacitance Tolerance: Within specified tolerance when measured at 1000 ±20 Hz, 25 ±5°C (standard is 20%).

Temperature Range: May be operated at rated voltage from −55°C to +85°C. Derate to 50% when operating at 125°C.

TYPES X601PE - X601CPE DIMENSIONS

SPECIFICATIONS — X601PE - X601CPE

Insulation Resistance: Minimum values according to Table I.

TABLE I

Temperature	+25°C	+85°C	+125°C
Megohms X Microfarads	20,000	2,000	20
Need Not Exceed (Megohms)	30,000	5,000	50

Measured after 2 minutes electrification at rated voltage.

Dissipation Factor: Less than 1.0% when measured at or referred to 1000 ±20 Hz for capacitance values up to and including 1.0 mfd. at 25°C ±5°C. Capacitance values greater than 1.0 mfd. measured at 60 ±6 Hz.

Dielectric Strength: Twice rated voltage for 1 minute through 100 ohms per volt limiting resistance.

Humidity Resistance: Tested as outlined in MIL-STD-202C, Method 103B, Condition B, no voltage applied. After final conditioning, IR no less than 1/3 minimum values listed in Table I.

Temperature Range: −55°C to 100°C, to 125°C with 50% derating.

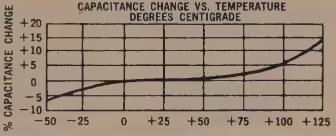
CAPACITANCE CHANGE VS. TEMPERATURE
DEGREES CENTIGRADE



SPECIFICATIONS

Insulation Resistance: Greater than 25,000 megohm-microfarads at 25°C but the IR need not exceed 50,000 megohms.

Dissipation Factor: Less than 1% when measured at or referred to 1000 ±20 Hz for capacitance values up to and including 1.0 mfd at 25 ±5°C. Capacitors greater than 1.0 mfd measured at 60 ±6 Hz.

Temperature Range: Full rated voltage from −55°C to +125°C.

D-C Voltage Ratings: Standard ratings include 50, 200, 400 and 600 volts. Higher ratings are available on a special design basis.

Temperature and Immersion Cycling: Tested to paragraph 4.6.10 or MIL-C-18312 to meet paragraph 3.13 of same specification.

Moisture Resistance: Tested to paragraph 4.6.13 of MIL-C-18312 to meet paragraph 3.16 of same specification.

Construction: Non-inductive winding, metal enclosed, hermetically sealed.

X683
DIMENSIONS

Note: For type X682 dimensions (one lead grounded to case) subtract ¹⁄₁₆″ from type X683 length.

TRW® CAPACITORS

MYLAR*
DIELECTRIC
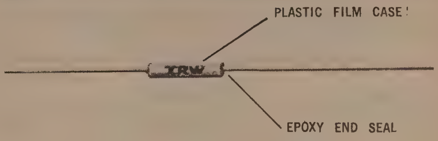
TYPE 608 - 608T CAPACITORS
FOIL WOUND "MICROMINIATURE"
75% SMALLER THAN MIL-C-25
50% SMALLER THAN MIL-C-27287

608

- Exceptionally Small Size
- High Insulation Resistance
- Instrument Quality
- Tolerance to ±1%



SPECIFICATIONS

Insulation Resistance: Minimum values according to Table I.

TABLE I

Temperature	+25°C	+85°C	+125°C
Megohms X Microfarads	50,000	1,000	25
Need Not Exceed (Megohms)	100,000	10,000	250

Measured after 2 minutes electrification at rated voltage.

Dissipation Factor: Less than 1.0% when measured at or referred to 1000 ±20 Hz for capacitance values up to and including 1.0 mfd. at 25°C ±5°C. Capacitance values greater than 1.0 mfd. measured at 60 ±6 Hz.

Dielectric Strength: Twice rated voltage for one minute through a limiting resistance of 100 ohms/volt.

Humidity Resistance: Will exceed requirements of MIL-C-27287, Paragraph 3.12, when tested at 40°C for 240 hours.

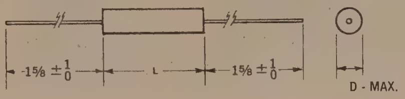
Temperature Range: May be operated at rated voltage from −55°C to +85°C and to 125°C with 50% derating.

Winding Construction: Extended foil (Non-inductive).

Capacitance Tolerances: ±20% ±10% ±5% ±1%.

NOTE: TYPE 608T

Available on request, 608T will meet all environmental requirements of MIL-C-27287.



Dimensional Tolerances: Length: +.063 −.031
Standard lead length 1⅝ +1 −0.

Lead Gauge: 26 AWG .375 Length
24 AWG .531 thru .781 Length
22 AWG .937 thru 1.031 Length
20 AWG 1.188 thru 1.312 Length

TRW® CAPACITORS

- Superior performance in a smaller package
- Available to ±1% tolerance
- Exceeds all environmental requirements of MIL-C-25
- Ideally suited for transistor circuitry

This series is based on years of experience in the design and construction of mylar dielectric capacitors. In addition, the use of high reliability techniques in manufacturing processes result in a design capable of replacing MIL-C-25 type units with very substantial size and weight savings.

The inherent stability of mylar dielectric capacitors makes them an ideal choice where freedom from drift under continuous duty is required. This characteristic also lends itself well to close initial tolerance requirements.

HIGH RELIABILITY REQUIREMENTS

These designs are capable of being produced to high reliability specifications comparable to MIL-C-14157 and MIL-C-19978.

Such customer applications are handled on a "project" basis, and the amount of premium cost varies depending on the level of performance required and on the lot acceptance testing specified.

SPECIFICATIONS

Insulation Resistance: Greater than 40,000 megohm-microfarads at 25°C, but the IR need not exceed 100,000 megohms. See separate curve for figures at higher temperatures.

Dissipation Factor: Less than 1% when measured at or referred to 1000 ±20 Hz at 25 ±5°C.

Temperature Range: −55°C to +85°C; to +125° with 50% derating.

Moisture Resistance: Tested to paragraph 4.6.10 of MIL-C-25 or to paragraph 4.6.16 of MIL-C-19978.

Dielectric Strength: Twice rated voltage for one minute through limiting resistance of 100 ohms per volt.

Temperature and Immersion Cycling: These designs comply with test requirements of military specification MIL-C-25. Tested to paragraph 4.6.12 of MIL-C-19978.

Special Case Styles: Available in all case and mounting variations of MIL-C-25 tubular types CP04 through CP11.

Capacitance Tolerances: Standard tolerance ±20%; also available in ±10%, ±5% and ±1%.

Voltage Range: 100, 200, 300, 400 and 600 volts. Type 682-683 also available in 50 volt sizes.

Vibration: These capacitors will meet the vibration test of military specification MIL-C-25. Tested to paragraph 4.6.10.2 of MIL-C-19978.

Life Test: 250 hours at +85°C and 125% of rated voltage. No more than 1 failure in 18 units tested.

Construction: Types 682 and 683 are extended foil.

APPLICATIONS

Airborne Instrumentation: The extremely miniature size and light weight of Types 682-683 are key advantages in airborne applications. Their use has contributed directly to the success of many instrument designers in achieving miniaturization goals.

Miniaturized Computers: Computers for commercial as well as military applications often require miniature capacitor designs. Where hermetically sealed types are needed, Types 682-683 offer appreciable space-savings over paper dielectric designs of equivalent ratings.

Transistor Circuitry: Miniaturized printed circuit chassis for computers and other similar applications capitalize on the space-saving feature of this design.

TRW® CAPACITORS

POLYSTYRENE
DIELECTRIC **863UW-863T**
TYPE 863UW AND 863T CAPACITORS
POLYSTYRENE HIGH QUALITY SUBMINIATURES
"SKIN-TIGHT" PLASTIC FILM CASE

- **Maximum Space Savings**
- **Tolerance to ±1%**
- **High Stability**
- **Extremely High IR**
- **Very Low Dielectric Absorption**
- **Excellent Retrace**

As can be seen from the above design highlights, these TRW Polystyrene dielectric capacitors are ideally suited for use in computer and timing circuitry. Their plastic film case provides the ultimate subminiature size. The 863T, which combines the size of the 863UW with special production procedures, is capable of meeting the environmental requirements of MIL-C-27287 within 85°C and 200% of rated voltage.

The dielectric absorption, or accumulation of charge after discharge, is exceptionally low. This fact, coupled with the characteristics of high capacitance stability and high insulation resistance, make the 863UW/863T ideal for use in many critical applications.

Detailed application engineering service data is available for the best results in the use of Polystyrene capacitors for your particular circuit. Contact the TRW Capacitor Engineering Dept.

SPECIFICATIONS

Temperature Range: May be operated at rated voltage from −55°C to +85°C.

Insulation Resistance: Greater than 300,000 megohm-microfarads at 25°C, but the IR need not exceed 500,000 megohms. See separate curve for figures at higher temperatures.

Dissipation Factor: Less than .10% when measured at or referred to 1000 ±20CPS.

Dielectric Strength: Twice rated voltage for one minute through a limiting resistance of 100 ohms/volt.

Life Test: 250 hours at +85°C and 125% of rated voltage. No more than one failure allowed of 18 units tested.

Temperature Coefficient: −110 ±30 parts/million/°C.

Humidity Resistance: Will meet or exceed requirements of MIL-C-27287, paragraph 3.12, when tested in accordance with MIL-STD-202C, Method 103B, Condition B. One failure allowed of 18 units tested.

Types 863UW and 863T have exceptionally low capacitance change with temperature. Their temperature coefficient is —110±PPM/°C.

CUT-AWAY SHOWS CONSTRUCTION

Dimensional Tolerances:
Diameter — Max.
Length — ±1⁄16
Standard lead length — 1⅝
+1, −0.

Lead Gauge:
24 AWG .000 dia. thru .235 dia.
22 AWG .236 dia. thru .438 dia.
20 AWG .439 dia. thru .749 dia.
18 AWG .750 dia. and greater.

Capacitance Tolerances: Standard tolerance ±20%. Also available in ±10%, ±5%, ±2%, ±1%.

Winding Construction: Extended Foil (Non-Inductive).

APPLICATIONS

Timing Circuits: The extremely low dielectric absorption of Polystyrene film capacitors is a main factor for consideration in its use in computers and timing circuits.

Precision Test and Measuring Equipment: Laboratory Standards Equipment and circuits which require a very minimum distortion call upon the Polystyrene capacitors in their design.

General: In general, capacitor users select Polystyrene types where the importance of low TC (negative) or low dielectric absorption is the controlling factor. These advantages are now available in a small package.

TYPE 663F-663FR CAPACITORS
FLAT SHAPES THAT INVITE "CROWDING"
OVAL CROSS-SECTION AXIAL OR RADIAL LEADS

- Sub-miniature Size
- Skin-tight Non-metallic Case
- Require Minimum Chassis Area
- Low Silhouette for Transistorized Circuits
- High Insulation Resistance
- Available in Tolerances to ±5%

SPECIFICATIONS

Dissipation Factor: Less than 1.0% when measured at or referred to 1000 ±20 Hz for capacitance values up to and including 1.0 mfd. at 25°C ±5°C Capacitance values greater than 1.0 mfd. measured at 60 ±6 Hz.

Insulation Resistance: Greater than 70,000 megohm-microfarads at 25°C, but the IR need not exceed 140,000 megohms. See separate curve for figures at higher temperatures.

Lead Pull Test: Capacitor Thickness — Force Applied*
Through .359″ . . . 4 pounds. Over .359″ . . . 8 pounds.
*axially for 663F — radially for 663FR.

Life Test: 250 hours at 85°C and 125% of rated voltage. No more than one failure allowed of 18 units tested.

Dielectric Strength: Twice rated voltage for one minute through a limiting resistance of 100 ohms/volt.

Humidity Resistance: Will meet or exceed requirements of MIL-C-27287, Paragraph 3.12, when tested in accordance with MIL-Std.-202C, Method 103B, Condition B. One failure allowed of 18 units tested.

Temperature Range: May be operated at rated voltage from −55°C to +85°C and to +125°C with 50% derating.

Winding Design: Extended foil construction.

APPLICATIONS

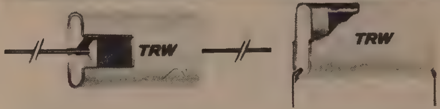
Mounting Flexibility: Sub-miniature size plus oval cross section helps solve many packaging problems where maximum space economy is required. This is of particular advantage in accomplishing last minute circuit changes.

Printed Circuits: Radial lead type 663FR provides leads that are pre-positioned for insertion into printed circuit boards. The tough mylar case is unaffected by the heat of dip-soldering.

Military Use: In addition to use in commercial and instrument grade products type 663F and 663FR are used in a wide variety of military items where hermetic sealing is not an absolute requirement. All versions of Type 663 are well suited for use in potted assemblies.

Capacitance Stability: Tests continued for 10,000 hours under rated operating conditions show that only negligible drift in capacitance and dissipation factor is encountered in these designs.

Transistor Circuits: Miniaturized printed circuit chassis for computers and other similar applications capitalize on the space-saving feature of this design.



Special purpose types 663F and 663FR have all the electrical ruggedness and dependability of TRW basic Type 663UW. This capacitor design has wide acceptance in both military and high quality instrument applications backed up by years of dependable field service.

Size is minimized by use of space-saving Mylar dielectric for the capacitor element and of a tough, dense plastic film case of less than 1/64″ thickness.

Shape of the 663F and 663FR is ideally adapted to layouts where chassis area is limited. The radial lead arrangement of Type 663FR finds best advantage in printed circuit chassis, and is well suited to dip-soldering techniques.

TEMPERATURE TYPICAL CHARACTERISTIC CURVES

	Type 663F	Type 663FR
Lead Gauge:	24 AWG	22 AWG all nom. lengths up to & including ¾″.
	22 AWG	20 AWG all nom. lengths ⅞″ to 1⅛″.
	20 AWG	20 AWG all nom. lengths 1¼″ to 1¾″.
	18 AWG	18 AWG all nom. lengths 1⅞″ & above.

Lead Length: Type 663F — 1⅝″ +1 −0. Type 663FR — 1″ minimum.

Tolerances: Length — +3/32 −1/16.

Lead Spacing (663FR Only): Center line to center line distance between leads shall equal nominal length of the capacitor, ±1/16 when measured 1/16″ below body line. Lead spacing tolerance ±1/16.

TRW® CAPACITORS

A WORD ABOUT TRW
— HIGH RELIABILITY
— CONDITIONED RELIABILITY

HIGH RELIABILITY

High Reliability at TRW Capacitors involves designing, manufacturing, conditioning and testing of parts to assure and predict a high level of performance. Manufacture under clean room conditions and raw material traceability are always included. TRW Capacitors has been deeply involved in High Reliability programs for many years, and has supplied to most missile, space and AEC systems, devices of demonstrated high performance built to specifications typically generated by joint effort with our customers.

Complete capability in clean room manufacturing and in environmental, qualification, screening, and life testing is available for the requirements of custom high reliability programs of varying complexities.

TYPICAL SCREENING-CONDITIONING SEQUENCE:

- **Burn-In**
- **Temperature Cycling**
- **Insulation Resistance at High Temperature (85°C to 125°C)**
- **Temperature Coefficient**
- **Radiographic Inspections**
- **Seal Test (Hermetically Sealed Units)**
- **Capacitance Check**
- **Dissipation Factor**
- **Withstanding Voltage**

The tests are conducted at various times and temperatures and the sequences and combinations can be performed to customer requirements.

CONDITIONED RELIABILITY

Where highest levels of reliability, with attendant extra expense and extended deliveries, are not required, Conditioned Reliability parts are often the ideal answer. Conditioned Reliability is a screening process of TRW standard or special devices on a 100% basis, using various tests and conditioning processes as required to attain an agreed upon predicted level of performance.

FACILITIES:

TRW Capacitors maintains a fully equipped testing facility for the complete Conditioned Reliability testing program. All equipment for both environmental and electrical testing and conditioning is capable of meeting all customer requirements.

QUALITY ASSURANCE:

Process and inspection data is maintained on file per NPC-200-3, MIL-Q-9858 Quality control standards and MIL-STD-790 Reliability Assurance Program.

APPLICATIONS:

TRW Conditioned Reliability capacitors are used in high performance applications. Typical uses can be found in:

- **Instrumentation**
- **Computers**
- **Missiles**
- **Space Vehicles**
- **Weapon Systems**
- **Communication Systems**

All TRW product types are adaptable to reliability conditioning, and great flexibility is available for designing such processing to attain the performance level desired. The amount of premium cost involved varies with the product chosen and the conditioning program specified.

TRW® CAPACITORS

- Long Stable Life
- Very High Insulation Resistance
- Lowest Dissipation Factor
- Humidity Resistant
- Saves on Size and Weight
- Capacitance Tolerance to 1%

Used for a number of years in the non-precision power capacitor field, polypropylene has now been developed by TRW Capacitors as a dielectric for miniaturized precision capacitors exhibiting unique and outstanding electrical and environmental characteristics. Particularly worthy of note is its stability. The X363UW exhibits negligible shift in capacitance under long term exposure to humidity, operating life, and temperature cycling. Insulation resistance, dielectric absorption and dissipation factor properties are all the equivalent of or superior to those of polystyrene.

Humidity resistance is excellent, with little change in any parameter occurring with exposure to moisture.

Combined with metallized construction providing size and weight savings equivalent to those of metallized polycarbonate capacitors, these properties make the X363UW ideal for precision instrument, communications, and high density circuitry applications.

SPECIFICATIONS

Insulation Resistance: Minimum values according to table below.

Temperature	+25°C	+85°C	+105°C
Megohms x Microfarads	300,000	30,000	3,000
Need Not Exceed (Megohms)	500,000	50,000	5,000

Measured after two minutes electrification at 200 Volts.

Dissipation Factor: Less than 0.1% at 25°C when measured at or referred to 1000 ±20 Hz for capacitance values up to and including 10.0 mfd.

Dielectric Strength: Twice rated voltage for one minute through a limiting resistance of 100 ohms/volt.

Dielectric Absorption: When tested per MIL-C-19978 the dielectric absorption shall not exceed .05%. Shorter test methods produce lower results. For further information, consult TRW Engineering.

Capacitance: Shall be within specified tolerance when measured at or referred to 1000 ±20 Hz for values up to and including 10.0 mfd. at 25° ±5°C.

Temperature Range: −55°C to 105°C with no voltage derating.

Life: Tested for 1000 hours at 105°C and 150% of rated voltage. Insulation resistance and dissipation factor shall meet original requirements. No more than 1 failure permitted of 12 parts tested.

Humidity: When tested per Method 106 MIL-STD-202 (no voltage applied) the following post test limits shall apply: Insulation resistance shall be no less than 20% minimum values listed in above table. Dissipation factor shall not exceed .1% and capacitance change no more than .5%. No more than 1 failure permitted for 12 parts tested.

Case: White polyester tape wrap with epoxy endfill.

Lead Material: Tinned solid copper wire.

Lead Pull Test: Tested as outlined in MIL-STD-202, Method 211, Condition A. Will withstand force of the following magnitude:
4½ lbs. — Diameters up to and including .359.
5 lbs. — Diameters over .359.

Instrumentation: Excellent stability plus outstanding electrical properties make the X363UW ideal for use in timing and integrating circuitry.

Severe Environments: The X363UW exhibits negligible capacitance drift and electrical property degradation under environmental conditions normally requiring hermetically sealed encasements with other dielectrics. Temperature, of course, must be limited to 105°C.

Close Tolerance: Where close tolerance capacitors are required, the X363UW is ideal because of inherent stability with service conditions and life.

Military Use: The inherent long life characteristics and reliable performance capability of the X363UW render it suitable for a wide variety of military applications where hermetic sealing or temperature capability higher than 105°C are not absolute requirements.

KEMET® TANTALUM, CERAMIC & FILM CAPACITORS

CAPACITOR REFERENCE

						REQUEST CATALOG
SOLID TANTALUM	HERMETIC SEAL	Standard and CSR13	T110 (J)	Popular military style — axial lead — 4 case sizes — high volumetric efficiency. Reference includes CSR13 capacitors which are available to S failure rate level.	.0047-330uF 6-125VDC	F-1851
		Non-Polar and CSR91	T111 (N)	Designed for applications where reversal of polarity is the prime consideration. Axial lead — 4 case sizes. Comparable performance to T110 Series.	.0023-160uF 6-125VDC	F-1852
		Miniature and CSR09	T120 (Z)	Compact especially designed for cordwood construction and packaging applications where space is a premium. Matches standard resistor and diode sizes.	.0047-22uF 6-125VDC	F-2028
		Radial-Lead	T130 (F)	Rectangular form permits maximum volumetric efficiency and packaging density. Meets or exceeds requirements of MIL-C-39003.	.22-220uF 6-75VDC	F-2628
		Extended Range and CSR23	T140 (A)	Extended range (to 1000uF-6V) in standard MIL cases. Also, available in T242 Series (CSR23) and in T141 Series (non-polar version).	.82-1000uF 6-60VDC	F-2138
		High Reliability	T210 (KG)	The ultimate in high reliability solid tantalums with failure rates as low as .001%/K hrs. Manufactured to KEMET's specification GR500 which outlines the most sophisticated and accurate reliability measurement method in the industry.	.0047-1000uF 6-125VDC	F-2697
	EPOXY	Molded-Axial	T310 (C)	Bullet shaped for positive polarity identification. 4 case sizes. Ideal for application in commerical and industrial electronic equipment.	.10-330uF 6-50VDC	F-2622
		Metal Case	T314 & T324	Metal Case with high impact, moisture resistant epoxy and seal in 4 miniature and 4 sub-miniature axial lead case sizes. Economical	.0047-330uF 6-50VDC	F-2791
		Molded Axial Miniature	T320 (D)	Molded axial cordwood size featuring extremely high capacitance-to-volume ratio. 3 case sizes. Precision dimensions permits use in high speed automatic insertion applications.	.0047-68uF 6-50VDC	F-2632
		Molded-Radial	T330 (P)	Compact precision molded space saving rectangular shape provides superior packing factor and space utilization in high density packaging applications.	.10-220uF 6-50VDC	F-1885
		Dipped Industrial	T362 T368 (E)	Economical — Radial lead — Dip coated epoxy encapsulation. Excellent performance characteristics over full temperature range. Available in .125" or .250 lead spacing.	.10-330uF 6-50VDC	F-2638
		Sub-Miniature Plastic Sealed	T370 Micron	Complete line of sub-miniature plastic sealed tantalums deisgned for use in hybrid & thick film circuits. Available in a variety of case styles, sizes, and lead configurations in polar & non-polar versions.	.001-220uF 2-50VDC	F-2710
		Dipped (Consumer)	T390 & T392	For consumer and commercial circuit applications. Low profile with .100" & .200" lead spacing for .1 inch PC board grids. 6 case sizes.	.1-680uF 3-50VDC	F-2816
	CHIP	Rectangular	T411 & T421	The ultimate in volumetric efficiency. Designed for hybid circuits and P.C. board applications. Copper Counter-Electrode permits assembly temperatures to 300° C and continuous operating temperatures to 175° C.	.10-100uF 4-50VDC	F-2715
CERAMIC	MIL LEADED	MIL-C-11015D	CK Series	Manufactured to MIL-C-11015D requirements. Includes CK05-CK06-CK12-CK13-CK14-CK15 and CK16 capacitors.	10pf-3.3uF 50-200VDC	F-2724
		MIL-C39014B	CKR Series	Established reliability — CKR05, CKR06, CKR11, CKR12, CKR14, CKR15, and CKR16 capacitors available to "R" (0.01%/K hrs.) failure rate level in most styles.	10pf-3.3uF 50-100VDC	F-2724
	KEMET	Dipped "Blue Max"	Dipped	Economical, radial lead, epoxy dipped maximum CV range monolithic Ceramic Capacitors in three dielectrics — COG Ultra-Stable; X7R Stable and Z5U General Purpose. 6 precision case sizes.	2.2pF-4.7uF 50,100 & 200 VDC	F-2795
		NPO& MIL-C-20	NPO	Ultra-stable monolithic ceramic capacitors in standard radial and axial lead MIL-CK/CKR sizes. 0 ± 30PPM/° C. MIL-C-20 styles CC & CCR.	1-82,000pf 50-200VDC	F-2793
	CHIPS	"Solder & Gold Guard"	0805 2225	8 standard sizes in two precision dielectrics — BX and NPO. Exclusive "Solder Guard" and "Gold Guard" end metalization, for high temperature assembly.	1-1,000,000p 50-100VDC	F2731
		MIL-C-55681	CDR	New military established reliability CDR01-CDR06 ceramic chip capacitors for critical applications — 6 case sizes.	10-470,000p 50-100VDC	F-2731
FILM		Flat Kap	F-300 Series	Ultra stable parylene film — available to 0 ± 50PPM/° C and capacitance tolerance to ± ½%. 8 case sizes radial and axial leads.	.001-1uF 50VDC	F-2274 F-2742

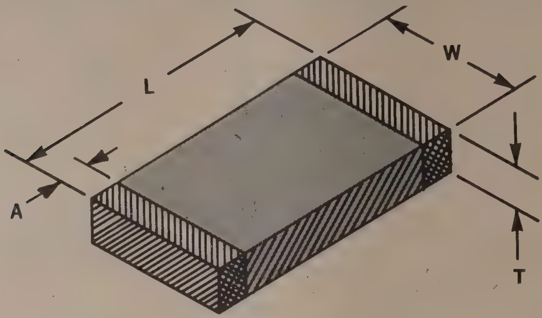
CERAMOLITHIC® CHIP CAPACITORS



HOW TO ORDER

N 050 BI 102 J PS

- DIELECTRIC CHARACTERISTIC[1] — N
- WORKING VOLTS DC[2] — 050
- TYPE — BI
- CAPACITANCE IN PICOFARADS[3] — 102
- TOLERANCE[4] — J
- TERMINATIONS[5] — PS

USCC will supply a **solderable** termination. If a specific termination material is required, see note "4" in ordering information. If solder coated parts are ordered, add .015 to the maximum part length and .010 to the maximum part width and thickness.

1. N = COG Dielectric
   W = X7R Dielectric
   Y = Y5V Dielectric
2. 050 = 50 WVDC
   100 = 100 WVDC
   200 = 200 WVDC
3. 102 = 1,000 pF (.001 Mfd); i.e., third digit signifies number of zeroes. For values below 10pF, use "R" in place of decimal point (1R5 = 1.5pF)
4. Minimum available capacitance tolerances:
   D = ±0.5pF (1pF to 10pF)
   F = ±1% (56pF and above)
   G = ±2% (27pF and above)
   H = ±3% (18pF and above) — COG Dielectric
   J = ±5% (10pF and above)
   K = ±10% (5.6pF and above) — X7R Dielectric
   M = ±20% (2.7pF and above) — Y5V Dielectric
   Z = +80%, −20%
   P = +100%, −0 (GMV)
   NOTE: BB chips available in J,K,M,Z or P tolerances only.
5. PS = Palladium Silver only
   A = Silver only
   S = Solder coat
   G = Gold only
   NOTE: Solder coating not available on BB size.

SPECIFICATIONS

WORKING VOLTAGES: 50/100/200 VDC for the COG dielectric, 50/100 VDC for the X7R and Y5V dielectrics.

TEMPERATURE COEFFICIENTS:
COG Dielectric — 0 ±30 PPM/°C, −55°C to +125°C
X7R Dielectric — ±15% TC, −55°C to +125°C
Y5V Dielectric — +22%, −82%, −30° to +85°C

DISSIPATION FACTORS: .15% for the COG dielectric, 2.5% for the X7R and Y5V dielectrics; maximum at 1kHz, 25°C.

INSULATION RESISTANCE: 100k megohms or 100 megohm-microfarads for the COG dielectric and 100K megohms or 500 megohm-microfarads for the X7R and Y5V dielectrics; whichever is less at +25°C.

DIELECTRIC STRENGTH: 250% of the rated voltage for the COG and X7R dielectrics and 200% of the rated voltage for the Y5V dielectric; 50 ma maximum charging current.

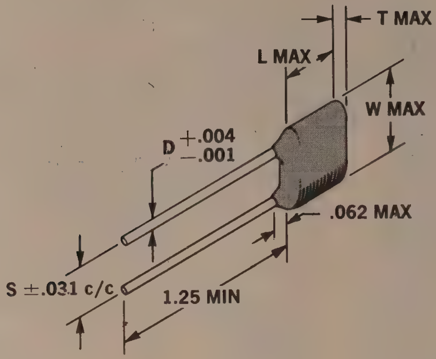
MONO-KAP CERAMIC CAPACITORS



HOW TO ORDER

CW20 C 103 K 2

TYPE — CW20

WORKING VOLTS DC[1] — C

CAPACITANCE IN PICOFARADS (pF)[2] — 103

TOLERANCE[3] — K

SPECIAL LEAD SPACING[4] — 2

1. **WVDC AVAILABLE:**
   C = 50 VDC
   A = 100 VDC
   B = 200 VDC (Contact the factory for available capacitance values in 200 VDC units not listed in the catalog.)
2. 103 = 10,000 pF (.01Mfd); i.e., the third digit signifies number of zeros. For values below 10 pF use "R" in place of decimal point (4R7 = 4.7 pF)
3. **MINIMUM AVAILABLE CAPACITANCE TOLERANCES:**
   D = ±0.5 pF (4.7 pF to 10 pF)
   F = ±1% (56 pF and above)
   G = ±2% (27 pF and above)
   H = ±3% (18 pF and above)
   J = ±5% (10 pF and above)
   K = ±10% (5.6 pF and above)
   M = ±20% (4.7 pF and above)
   Z = +80%, −20% (4.7 pF and above)
   P = +100%, −0% (GMV — all values)
4. Special lead spacing available on the .200 X .200 size only — S = .200 instead of .100. To order suffix the standard part number with a "2".

MECHANICAL SPECIFICATIONS

CASE: Epoxy coated

LEAD MATERIAL: Solder coated, copper clad steel.

TERMINAL STRENGTH: Method 211, MIL-STD-202, test condition A (5 pounds)

MARKING: As size permits, the following markings will be used (listed in order of preference)

- Capacitance
- Mfg. Identification
- Tolerance
- Temperature Characteristic
- Voltage

NOTE: Where size is prohibitive, only capacitance will be indicated. Marking one side only.

ENVIRONMENTAL SPECIFICATIONS

BAROMETRIC PRESSURE: Method 105, MIL-STD-202, test condition E (150,000 feet), 100% of rated voltage applied for 5 seconds, current limited to 50 mA.

VIBRATION: Method 204, MIL-STD-202, test condition B (10-2,000 cps; 15 G)

SHOCK: Method 205, MIL-STD-202, test condition C (50 G; 11 ms)

TEMPERATURE CYCLING: Method 107, MIL-STD-202, −55°C to +125°C for COG and X7R dielectrics; −55°C +85°C for Z5U and Y5V dielectrics.

IMMERSION CYCLING: Method 104, MIL-STD-202, test condition A (15 minutes in tap water)

MOISTURE RESISTANCE: Method 106, MIL-STD-202, 10 cycles without loading voltage applied.

LIFE: 200% of rated voltage at +125°C for COG and X7R dielectrics, 150% of rated voltage at +85°C for Z5U and Y5V dielectrics; for 1000 hours.

X7R CHARACTERISTIC

WORKING VOLTAGE: 50/100 VDC (Contact the factory for available capacitance values in 200 VDC units)
TEMPERATURE COEFFICIENT: ±15% from −55°C to +125°C, (EIA Characteristic X7R)
DISSIPATION FACTOR: 2.5% maximum at 1 kHz, 25°C
INSULATION RESISTANCE: 100 K megohms or 500 megohm-microfarads, whichever is less at 25°C, 100 VDC applied
DIELECTRIC STRENGTH: 250% rated voltage with 50 ma maximum charging current
CAPACITANCE TOLERANCES AVAILABLE: K, M, Z, P

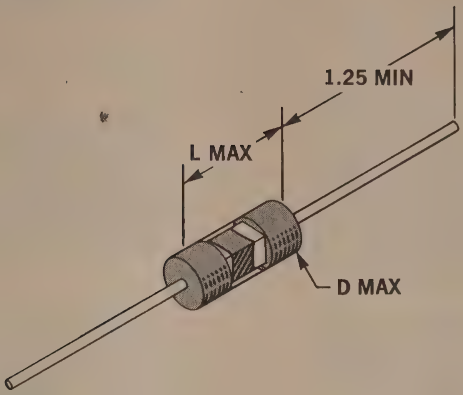
MONO–GLASS CERAMIC CAPACITORS



HOW TO ORDER

C40 C 103 K

SERIES

WORKING VOLTS DC[1]

CAPACITANCE IN PICOFARADS (pF)[2]

TOLERANCE[3]

1. **WVDC AVAILABLE:**
   C = 50 VDC
   A = 100 VDC
2. 103 = 10,000 pF (.01 mfd); i.e., the third digit signifies number of zeros. For values below 10 pF use "R" in place of decimal point (4R7 = 4.7 pF)
3. **MINIMUM AVAILABLE CAPACITANCE TOLERANCES:**
   D = ±0.5 pF (1-10 pF)
   J = ±5% (10 pF and above)
   K = ±10% (5.6 pF and above)
   M = ±20% (2.7 pF and above)
   Z = +80%, −20% (all values)
   P = +100%, −0% (GMV — all values)

MECHANICAL SPECIFICATIONS

CASE: Glass to metal seal
LEAD MATERIAL: .025" dia. — Solderable lead
MARKING:
Parts will be marked with the following:
"USCC"
Capacitance
Tolerance Letter Designation
Voltage
NOTE: When space permits, the dielectric will be indicated.

ENVIRONMENTAL SPECIFICATIONS

BAROMETRIC PRESSURE: Method 105, MIL-STD-202, test condition E (150,000 feet), 100% of rated voltage applied for 5 seconds, current limited to 50 mA.

VIBRATION: Method 204, MIL-STD-202, test condition B (10-2,000 cps; 15 G)

SHOCK: Method 205, MIL-STD-202, test condition C (50 G; 11 ms)

TEMPERATURE CYCLING: Method 107, MIL-STD-202, −55°C to +125°C for COG and X7R dielectrics; −55°C +85°C for Z5U and Y5V dielectrics.

IMMERSION CYCLING: Method 104, MIL-STD-202, test condition A (15 minutes in tap water)

MOISTURE RESISTANCE: Method 106, MIL-STD-202, 10 cycles without loading voltage applied.

LIFE: 200% of rated voltage at +125°C for COG and X7R dielectrics, 150% of rated voltage at +85°C for Z5U and Y5V dielectrics; for 1000 hours.

MONO-GLASS

GLASS ENCAPSULATED
CERAMIC CAPACITOR

C40 SERIES

COG (NPO) CHARACTERISTIC

WORKING VOLTAGE: 50/100 VDC
TEMPERATURE COEFFICIENT: 0 ±30 PPM/°C, −55°C to +125°C (EIA Characteristic COG);
DISSIPATION FACTOR: .15% maximum at 1 kHz, 25°C
INSULATION RESISTANCE: 100 K megohms or 100 megohm-microfarads, whichever is less at 25°C, at rated voltage
DIELECTRIC STRENGTH: 250% rated voltage with 50 ma maximum charging current
CAPACITANCE TOLERANCES AVAILABLE: D, J, K, M.
NOTE: These represent the most competitive tolerances in standard case sizes. For tolerances below ±5% in capacitance values above 10pF, contact the factory for unit dimensions.

SPECIFICATIONS

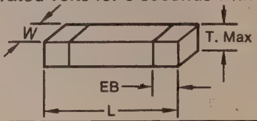
Capacitance: 1.0 pf thru 100 pf measured at 1.0 VRMS, 1.0 MHz. Over 100 pf measured at 1.0 VRMS, 1.0 KHz.

Dissipation Factor: 0.15% max. measured at 1.0 VRMS, 1.0 MHz, 1.0 pf thru 100 pf. Over 100 pf measured at 1.0 VRMS, 1.0 KHz.

Insulation Resistance: 100,000 Megohms or 1,000 Megohm-mfd whichever is less @ 25°C: 10,000 Megohms or 100 Megohm-mfd whichever is less @ 125°C.

Dielectric Strength: 250% rated volts for 5 seconds with 50 ma max current.

L = Length W = Width
T. Max = Thickness (max)
EB = Electrode Band



HOW TO ORDER

3 BP 050 S 101 J ( )

- Size — 3
- Dielectric — BP
- DC working volts (50 or 100) — 050
- Chip capacitor — S
- Capacitance code, pf (ex 100 pf) — 101
- Tolerance: K ± 10%, J ± 5%, G ± 2%, F ± 1%; Under 10 pf, C ± .25 pf, D ± .5 pf — J
- Standard termination is silver. No letter required. For non-standard terminations use following: (D) Palladium Silver or (S) Solder coated readily available. (G) Gold and (P) Platinum Gold special order. — ( )

VARADYNE

TYPE BX CHIP CAPACITORS STABLE (±15%) EIA CHAR. X7R

SPECIFICATIONS

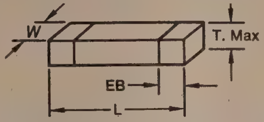
Capacitance: Per table measured at 1.0 VRMS, 1.0 KHz, 25°C.

Dissipation Factor: 2.0% max at 1.0 VRMS, 1.0 KHz, 25°C.

Insulation Resistance: 100,000 megohms or 1,000 megohm-mfd whichever is less @ 25°C; 10,000 megohms or 100 megohm-mfd whichever is less at 125°C.

Dielectric Strength: 250% rated volts for 5 seconds with 50 ma max current.

L = Length W = Width
T. Max = Thickness (max)
EB = Electrode Band



HOW TO ORDER 3 BX 050 S 103 K ( )

- Size — 3
- Dielectric — BX
- DC working volts (50 or 100) — 050
- Chip capacitor — S
- Capacitance code, pf (ex 10,000pf) — 103
- Tolerance: J = ± 5%, K = ± 10%, M = ± 20% — K
- Standard termination is silver. No letter required. For non-standard terminations use following: (D) Palladium Silver or (S) Solder coated readily available. (G) Gold and (P) Platinum Gold special order. — ( )

TEMPERATURE COEFFICIENT

±15% max. change (X7R)
−55° C to +125° C

INSULATION RESISTANCE

2500 Megohm-mfd or 100K Megohms, whichever is less at 25° C initial

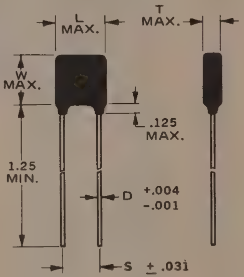
DISSIPATION FACTOR

2.0% MAX when measured per MIL-C-11015

AFTER LIFE TEST, IMMERSION OR MOISTURE:

Insulation Resistance = 250 Megohm-Mfd. or 10K Megohms, whichever is less.

Dissipation Factor = Less Than 2.5%



* WHEN ORDERING SPECIFY:

1. TOLERANCE K±10%, M±20%
2. LEAD SPACING
3. LEAD DIAMETER

50 VOLT GENERAL PURPOSE MONOLITHIC CAPACITORS

Varadyne general purpose capacitors are designed for those applications requiring maximum capacitance in minimum case size where wide variations in capacitance due to temperature, voltage and frequency may be tolerated. Parts are made with Varadyne's multilayer monolithic capacitor elements and are epoxy coated for complete environmental protection.

INSULATION RESISTANCE

2500 Megohm-mfd or 10K Megohms, whichever is less at 25° C initial

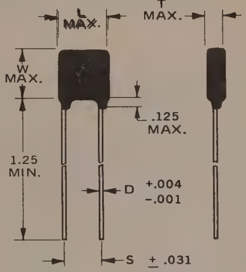
DISSIPATION FACTOR

2.5% MAX when measured per MIL-C-11015

AFTER LIFE TEST, IMMERSION OR MOISTURE:

Insulation Resistance = 250 Megohm-Mfd. or 1000 Megohms, whichever is less.

Dissipation Factor = Less Than 3%



* WHEN ORDERING SPECIFY:

1. TOLERANCE M±20%, Z $^{+80}_{-20}$
2. LEAD SPACING
3. LEAD DIAMETER

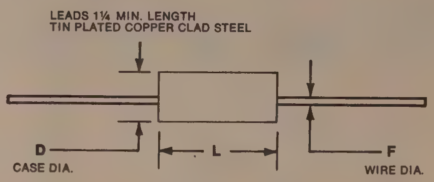
AXIAL LEAD-GLASS CASE MONOLITHIC CERAMIC CAPACITORS

AVAILABLE IN THREE STANDARD CASE SIZES

Style	Dimensions		
	L Max.	D Max.	F
1801	.160	.100	.020 std. 016 opt.
1802	.260	.100	.020 std. 016 opt.
1803	.400	.155	.020 std.



CHOICE OF THREE CERAMIC FORMULATIONS

TYPE BN—ULTRA STABLE NPO

Where complete stability of capacitance is required when changes in temperature frequency and voltage are encountered. Also, where low loss and/or high Q are necessary.

Insulation Resistance: 100,000 megohms or 1,000 megohm-mfd, whichever is less, at 25°C.

10,000 megohms or 100 megohm-mfd, whichever is less at 125°C.

Dissipation Factor: 0.15% max. measured at 1.0 vrms. 1.0 MHz 10 pf through 100 pf. Over 100 pf measured at 1.0 KHz.

Dielectric Strength: 250% rated volts for 5 seconds with 50 ma max. current.

TYPE BR—STABLE X7R

In applications where moderate variations in capacitance due to changes in frequency, temperature and voltage may be tolerated.

Insulation Resistance: 100,000 megohms or 1,000 megohm-mfw, whichever is less at 25°C.

10,000 megohms or 100 megohm-mfd, whichever is less at 125°C.

Dissipation Factor: 2.0% max. measured at 1.0 vrms. 1.0 KHz at 25°C.

Dielectric Strength: 250% rated volts for 5 seconds with 50 ma max. current.

TYPE GM—GENERAL PURPOSE

For use in applications where wide variations in capacitance are acceptable (i.e., by-pass) or where the environment is closely controlled.

Insulation Resistance: 10,000 megohms or 100 megohm-mfd, whichever is less at 25°C.

1,000 megohms or 10 megohm-mfd, whichever is less at 85°C.

Dissipation Factor: 2.5% max. measured at 1.0 KHz at 25°C.

Dielectric Strength: 250% rated volts for 5 seconds with 50 ma max. current.

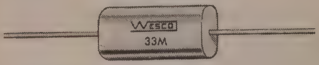
WESCO®

MYLAR* FILM-FOIL CAPACITORS



SPECIFICATIONS

DIELECTRIC WITHSTANDING VOLTAGE

200% of rated voltage applied through a minimum limiting resistance of 100 Ohms/Volt. Duration of voltage stress shall be 15 seconds minimum and 1 minute maximum at 25°C.

TEMPERATURE RANGE

−55°C to +85°C with full rated voltage applied. To +125°C with 50% of rated voltage.

INSULATION RESISTANCE

At 25°C after 2 minutes of electrification at rated voltage or 500 VDC, whichever is less, the minimum product of Insulation Resistance and Capacitance shall be 100,000 megohms-microfarads, but need not exceed 100,000 megohms.

DISSIPATION FACTOR

Shall not exceed 0.75% when measured at 25°C and 1000 Hz, ±20 Hz. See characteristic curves for D.F. ratings at other temperatures.

CAPACITANCE AND TOLERANCE

Shall be measured within the tolerance limits specified. Measurements will be made at 25°C and 1000 Hz ±20 Hz.

LIFE TEST

Shall withstand 140% of rated voltage at 85°C for 250 hours. One failure in twelve shall be permitted.

CAPACITANCE STABILITY (DRIFT)

Less than 0.50% when measured in the following manner: three capacitance readings at 25°C, each made prior to and after temperature cycling from room to 80°C, and room to −55°C. The mathematical difference between the two extremes, divided by the intermediate value, and then multiplied by 100, yields the stability expressed in percent.

HUMIDITY RESISTANCE

Meets requirements of Mil-C-27287,, Para. 3.12 when tested in accordance with Mil-STD.-202C, Method 103 B, Condition B.

LEAD PULL AND BEND TEST

Steady pull of 5 pounds applied axially to leads for one minute. Bend test shall consist of one bend from the point of egress, first 90° in one direction, back to the original axial position, and then 90° in the opposite direction with no evidence of breakage.

FEATURES

Wrap and fill construction.
Tubular or oval configuration for optimum space savings.
Extended foil design.
Quality control procedures per Mil-Q-9858.
Will meet or exceed Mil-C-27287.

APPLICATIONS

Computers
Data Processing Equipment
Peripheral Equipment
Aircraft and Missile Systems
Industrial Instrumentation
Navigation and Distance Measuring Equipment
Communications Equipment
Filters

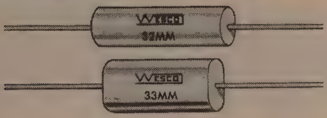
METALIZED MYLAR* CAPACITORS



SPECIFICATIONS

DIELECTRIC WITHSTANDING VOLTAGE

200% of rated voltage applied through a minimum limiting resistance of 100 Ohms/Volt. Duration of voltage stress shall be 15 seconds minimum and 1 minute maximum at 25°C.

TEMPERATURE RANGE

−55°C to +85°C with full rated voltage applied. To +125°C with 50% of rated voltage.

INSULATION RESISTANCE

At 25°C after 2 minutes of electrification at rated voltage or 500 VDC, whichever is less, the minimum product of Insulation Resistance and Capacitance shall be 30,000 megohms-microfarads, but need not exceed 30,000 megohms.

DISSIPATION FACTOR

Shall not exceed 1.0% when measured at 25°C and 1000 Hz, ±20 Hz. See characteristic curves for D.F. ratings at other temperatures.

CAPACITANCE AND TOLERANCE

Shall be measured within the tolerance limits specified. Measurements will be made at 25°C and 1000 Hz, ±20 Hz.

LIFE TEST

Shall withstand 140% of rated voltage at 85°C for 250 hours. One failure in twelve shall be permitted.

CAPACITANCE STABILITY (DRIFT)

Less than 0.3% when measured in the following manner: three capacitance readings at 25°C, each made prior to and after temperature cycling from room to 85°C, and room to −55°C. The mathematical difference between the two extremes, divided by the intermediate value, and then multiplied by 100, yields the stability expressed in percent.

HUMIDITY RESISTANCE

Meets requirements of Mil-C-27287, Para. 3.12 when tested in accordance with Mil-STD.-202C, Method 103 B, Condition B.

LEAD PULL AND BEND TEST

Steady pull of 5 pounds applied axially to leads for one minute. Bend test shall consist of one bend from the point of egress, first 90° in one direction, back to the original axial position, and then 90° in the opposite direction with no evidence of breakage.

FEATURES

- Wrap and fill construction
- Tubular and oval configuration for optimum space savings
- Extended foil design
- Miniature size — lightweight
- Low dissipation factor
- Excellent stability
- Quality control procedures per Mil-Q-9858

APPLICATIONS

- Data Processing Equipment
- Aircraft and Missile Systems
- Industrial Instrumentation
- Navigation and Distance Measuring Equipment
- Communications Equipment
- Tachometers
- Filters
- Peripheral Equipment

POLYSTYRENE CAPACITORS

SPECIFICATIONS

DIELECTRIC WITHSTANDING VOLTAGE

200% of rated voltage applied through a minimum limiting resistance of 100 Ohms/Volt. Duration of voltage stress shall be 15 seconds minimum and 1 minute maximum at 25°C.

INSULATION RESISTANCE

At 25°C after 2 minutes of electrification at rated voltage or 500 VDC, whichever is less, the minimum product of Insulation Resistance and Capacitance shall be 500,000 megohms-microfarads, but need not exceed 500,000 megohms.

DISSIPATION FACTOR

Shall not exceed .05% when measured at 25°C and 1000 Hz, ± Hz. See characteristic curves for D.F. ratings at other temperatures.

CAPACITANCE AND TOLERANCE

Shall be measured within the tolerance limits specified. Measurements will be made at 25°C and 1000 Hz, ±20 Hz.

LIFE TEST

Shall withstand 140% of rated voltage at 85°C for 250 hours. One failure in twelve shall be permitted.

TEMPERATURE COEFFICIENT

Capacitance shall change linearly over operating temperature range at rate of −105, ±30 parts per million/°C.

CAPACITANCE STABILITY (DRIFT)

Less than .05% when measured in the following manner: three capacitance readings at 25°C, each made prior to and after temperature cycling from room to 85°C, and room to −55°C. The mathematical difference between the two extremes, divided by the intermediate value, and then multiplied by 100, yields the stability expressed in percent.

HUMIDITY RESISTANCE

Meets requirements of Mil-C-27287, Para. 3.12 when tested in accordance with Mil-STD.-202C, Method 103 B, Condition B.

LEAD PULL AND BEND TEST

Steady pull of 5 pounds applied axially to leads for one minute. Bend test shall consist of one bend from the point of egress, first 90° in one direction, back to the original axial position, and then 90° in the opposite direction with no evidence of breakage.

TEMPERATURE RANGE

−55°C to +85°C with full rated voltage applied.

METALIZED POLYCARBONATE CAPACITORS

SPECIFICATIONS

DIELECTRIC WITHSTANDING VOLTAGE

200% of rated voltage applied through a minimum limiting resistance of 100 Ohms/Volt. Duration of voltage stress shall be 15 seconds minimum and 1 minute maximum at 25°C.

TEMPERATURE RANGE

−55°C to +85°C with full rated voltage applied. To +125°C with 50% of rated voltage.

INSULATION RESISTANCE

At 25°C after 2 minutes of electrification at rated voltage or 500 VDC, whichever is less, the minimum product of Insulation Resistance and Capacitance shall be 50,000 megohms-microfarads, but need not exceed 50,000 megohms.

DISSIPATION FACTOR

Shall not exceed 0.3% when measured at 25°C and 1000 Hz, ±20 Hz. See characteristic curves for D.F. ratings at other temperatures.

CAPACITANCE AND TOLERANCE

Shall be measured within the tolerance limits specified. Measurements will be made at 25°C and 1000 Hz, ±20 Hz.

LIFE TEST

Shall withstand 140% of rated voltage at 85°C for 250 hours. One failure in twelve shall be permitted.

CAPACITANCE STABILITY (DRIFT)

Less than 0.3% when measured in the following manner: three capacitance readings at 25°C, each made prior to and after temperature cycling from room to 85°C, and room to −55°C. The mathematical difference between the two extremes, divided by the intermediate value, and then multiplied by 100, yields the stability expressed in percent.

HUMIDITY RESISTANCE

Meets requirements of Mil-C-27287, Para. 3.12 when tested in accordance with Mil-STD.-202C, Method 103B, Condition B.

LEAD PULL AND BEND TEST

Steady pull of 5 pounds applied axially to leads for one minute. Bend test shall consist of one bend from the point of egress, first 90° in one direction, back to the original axial position, and then 90 ° in the opposite direction with no evidence of breakage.

POLYPROPYLENE CAPACITORS

SPECIFICATIONS

DIELECTRIC WITHSTANDING VOLTAGE

200% of rated voltage applied through a minimum limiting resistance of 100 Ohms/Volt. Duration of voltage stress shall be 15 seconds minimum and 1 minute maximum at 25°C.

INSULATION RESISTANCE

At 25°C after 2 minutes of electrification at rated voltage or 500 VDC, whichever is less, the minimum product of Insulation Resistance and Capacitance shall be 250,000 megohms-microfarads, but need not exceed 250,000 megohms.

DISSIPATION FACTOR

Shall not exceed .05% when measured at 25°C and 1000 Hz, ±20 Hz. See characteristic curves for D.F. ratings at other temperatures.

CAPACITANCE AND TOLERANCE

Shall be measured within the tolerance limits specified. Measurements will be made at 25°C and 1000 Hz, ±20 Hz.

LIFE TEST

Shall withstand 140% of rated voltage at 105°C for 250 hours. One failure in twelve shall be permitted.

TEMPERATURE COEFFICIENT

Capacitance shall change linearly over operating temperature range of −55°C to +85°C at rate of −290, ±75 parts per million/°C.

CAPACITANCE STABILITY (DRIFT)

Less than .2% when measured in the following manner: three capacitance readings at 25°C, each made prior to and after temperature cycling from room to 105°C, and room to −55°C. The mathematical difference between the two extremes, divided by the intermediate value, and then multiplied by 100, yields the stability expressed in percent.

HUMIDITY RESISTANCE

Meets requirements of Mil-C-27287, Para 3.12 when tested in accordance with Mil-STD.-202C, Method 103 B, Condition B.

LEAD PULL AND BEND TEST

Steady pull of 5 pounds applied axially to leads for one minute. Bend test shall consist of one bend from the point of egress, first 90° in one direction, back to the original axial position, and then 90° in the opposite direction with no evidence of breakage.

TEMPERATURE RANGE

−55°C to +105°C with full rated voltage applied.

STANDARD LEAD SIZES: #24 AWG TCW: up to and including .203″ Dia.
#22 AWG TCW: from .204″ thru .312″ Dia.
#20 AWG TCW: .313″ Dia.and over

CAPACITY TOLERANCE: STANDARD . . . ±10% / OTHER . . . from 20% to ±1%
Other values as well as voltage ratings are available upon request.

FEATURES

32P

- Wrap and fill construction
- Excellent long-term stability
- Superior "Q" for tuned circuits
- High insulation resistance
- Linear temperature coefficient
- Quality control procedures per Mil-Q-9858
- Extended foil design

32MPC

- Wrap and fill construction
- Micro-miniature — lightweight
- Low dissipation factor
- Zero TC ±50 ppm/°C from +25°C to +55°C
- Extended foil design
- Excellent stability
- Quality control procedures per Mil-Q-9858

32PL

- Wrap and fill construction
- Excellent long-term stability
- Superior "Q" for tuned circuits
- High insulation resistance
- Linear temperature coefficient (−55°C to +85°C)
- Quality control procedures per Mil-Q-9858
- Extended foil design

APPLICATIONS

32P & 32PL

- Computers
- Data Processing Equipment
- Aircraft and Missile Systems
- Industrial Instrumentation
- Navigation and Distance Measuring Equipment
- Communications Equipment
- Timing and Retrace Circuits
- Integrating Networks
- High "Q" Low Loss Filters
- Peripheral Equipment

32MPC

- Data Processing Equipment
- Aircraft and Missile Systems
- Industrial Instrumentation
- Navigation and Distance Measuring Equipment
- Communications Equipment
- Tachometers
- Filters
- Peripheral Equipment

EXPLANATION OF CATALOG NUMBER

32 M 1002 K-1

32	Round, Wrap and Fill, with epoxy seals.
M	Mylar-Foil, Axial Leads*
1002	In Picofarads — first three digits are significant. Last digit specifies number of zeros, i.e., 1002 = 10,000 pfd. or 0.01 mfd.
K	Capacity Tolerance: K = ±10% H = ±20% F = ±1% M = ±20% J = ±5% G = ±2%
1	DC Voltage Rating: 05 = 50 VDC 2 = 200 VDC 6 = 600 VDC 1 = 100 VDC 4 = 400 VDC etc.
*	For Radial Leads, add letter "R" at end of part number.

HUMISEAL COATINGS

GENERAL CHART

Listed in this General Chart of Properties are ten of the most frequently used HumiSeal Protective Coatings and their principal properties. These have been tabulated in order to facilitate comparison of their characteristics and selection of the most suitable type for a specific application. In addition to these HumiSeal types we manufacture a variety of coatings for special purposes, including high temperature applications. Should none of the coatings listed in this chart fulfill your requirements, we suggest that you contact us for recommendations.

	PROPERTIES OF LIQUID HumiSeal										THERMAL PROPERTIES		
HumiSeal Type[1]	Specific Weight (lbs. per gallon)[2]	Solids Content (% by weight)[3]	Viscosity, with catalyst when applicable (centipoises)[4]	Flash Point (°F)[5]	Drying Time for Handling[6]	Recommended Curing Conditions	Time Required to Reach Optimum Properties	Pot Life, at Room Temperature	Shelf Life, at Room Temperature	Coverage per gallon (in sq. ft.) After One Dip	Continuous Use Temperature Range (°F)	Thermal Shock Test[7]	Solderability[8]
1B12	7.3	20	30	40	10 min.	24 hrs. at room temp. or 30 min. at 170°F	24 hrs.	1 year	1 year	550	−75°F to +280°F	Passes	Good
1B15	7.6	35	470	30	10 min.	24 hrs. at room temp. or 30 min. at 170°F	24 hrs.	1 year	1 year	450	−75°F to +270°F	Passes	Good
1B31	7.6	35	160	30	10 min.	24 hrs. at room temp. or 30 min. at 170°F	24 hrs.	6 mos.	6 mos.	450	−75°F to +270°F	Passes	Good
1A20	8.5	50	120	60	60 min.	24 hrs. at room temp.	1 week	6 mos.	6 mos.	375	−70°F to +250°F	Passes	Excellent
1A27	8.0	50	5000	100	15 min.	24 hrs. at room temp.	1 week	1 year	1 year	450	−90°F to +250°F	Passes	Excellent
1A33	7.7	44	160	30	15 min.	24 hrs. at room temp.	1 week	6 mos.	6 mos.	300	−90°F to +250°F	Passes	Excellent
2A72	7.8	36	<20	70	60 min.	24 hrs. at room temp. or 2 hrs at 170°F	1 week	4 hrs.	6 mos.	650	−70°F to +250°F	Passes	Excellent
2B13	7.5	42	50	40	30 min.	90 min. at 200°F	1 week	24 hrs.	1 year	480	−70°F to +270°F	Passes	Poor
2A51	9.2	100	6000	non flammable	2 hrs.	24 hrs. at room temp. or 2 hrs. at 200°F	1 week	6 hrs.	6 mos.	200	−70°F to +250°F	Passes	Poor
2A53	7.8	54	300	70	30 min.	2 hrs. at 200°F	1 week	24 hrs.	6 mos.	400	−70°F to +250°F	Passes	Poor

HumiSeal TYPES LISTED IN BOLD PRINT COMPLY WITH THE REQUIREMENTS OF MIL-I-46058C

All technical data in this bulletin are based on test results using the stated standards and are believed to be correct. However, since the end use of HumiSeal materials (and the manner of storing and handling them) is beyond our control, we make no warranty — expressed or implied — as to the fitness of use, results to be obtained from or effects of use with respect to these materials. Their use shall be solely by the judgment of and at the risk of the end-user notwithstanding any statement contained in this bulletin.

1. The first digit in the type number specifies whether the product is a one-, or a two-component system.
2. Fed-Std 141a, Method 4184.
3. Fed-Std 141a, Method 4044.
4. Fed-Std 141a, Method 4287.
5. Fed-Std 141a, Method 4291.
6. Fed-Std 141a, Method 4061.
7. Mil-I-46058C.
8. Visual evaluation for ease of soldering with an 85 watt iron through a 2 mil film.
9. Fluorescent dye may be added if required.
10. Fed-Std 141a, Method 2121.
11. Fed-Std 406, Method 7031, Procedure A.
12. Fed-Std 141a, Method 6303.
13. ASTM-D150-65T, at 1 MHz and 25°C.
14. Mil-I-46058C Insulation resistance during 10th cycle, at 65°C and 98% RH.

FOR ELECTRONICS

OF PROPERTIES

HumiSeal Protective Coatings are available in one-quart or one-gallon cans, five-gallon pails, or fifty-five gallon drums. HumiSeal types 1B15 and 1A27 are also available in 16-ounce aerosol containers. All HumiSeal types listed in this chart may be applied by dip, brush or spray. Literature on recommended techniques for the proper application of coatings and preparation of the substrate is available upon request.

OVER 100,000 STRONG

Every month over 100,000 buyers and specifiers like yourself receive Electronic Products Magazine . . . that makes us the largest electronics magazine around. And we're the largest for a darn good reason . . . we give you what you need: a practical editorial approach . . . one that's application and new product oriented. Editorial that offers solutions to the problems you face in your everyday task of designing and building electronic systems and subassemblies. The type of information you can put to use now.

If you're not getting EPM . . . why not write our circulation manager for a qualification form and join the over 100,000 strong.

GC ELECTRONICS
NON-FLAMMABLE
DRY-KLEEN
DRY
CONTACT CLEANER
RELAY-KLEEN
Contact Cleaner
SPRA KLEEN
NO-OX
DE-OX-ID
CONTACT CLEANER
FREEZE MIST
COOLS CIRCUITS 3 TIMES FASTER
CIRCUIT COOLER
High quality silicone lubricant

DRY KLEEN

Clean contacts, relays and other electronic devices. Leaves absolutely no deposits. Excellent degreaser for inks and gummy deposits on all electrical or mechanical apparatus. Non-flammable.

8669	16 oz. aerosol	$2.53

RELAY KLEEN

Cleans relays, contacts and other electronic devices where no oily, residual deposits are desired. Excellent degreaser and general solvent for gummy deposits on all electrical or mechanical equipment. Non-flammable; contains no carbon tetrachloride.

8682-3	3 oz. aerosol	$1.23
8682	6 oz. aerosol	2.08
8682-16	16 oz. aerosol	3.84

SPRA KLEEN

Eliminates noise due to dust, dirt and corrosion on electrical contacts. Cleans and lubricates contacts, controls, relays, switches and other sliding contact devices in one fast operation.

8666-3	3 oz. aerosol	$ .86
8666	6 oz. aerosol	1.18
8666-16	16 oz. aerosol	2.35

NO-OX

Electronic contact cleaner dissolves corrosion quickly without harsh solvents. Lubricates and protects silde contacts long after application. Recommended for maintenance of volume and tone controls, attenuators, relay contacts, patchboard jacks and similar equipment.

100-02	2 oz. bottle	$1.38
100-06	6 oz. aerosol	2.48

DE-OX-ID

The most powerful all-purpose TV-radio cleaner! Consists of active ingredients in a light oil base. Use on volume and tone controls, audio mixers, relays—restores noise free operation instantaneously. Highly concentrated—protects for months.

19-2	2 oz. bottle	$1.38
19-6	6 oz. aerosol	2.48
19-16	16 oz. bottle	8.80

EXTRA DRY SUPER FREEZE MIST

Cools circuits 3 times faster! Locates bad capacitors, transistors and oxidized joints by instantly cooling components. Non-toxic, odor free, leaves no liquid residue on parts.

10-702-3	3 oz. aerosol	$ .88
10-702	15 oz. aerosol	2.75

ZERO MIST CIRCUIT COOLER

Locates "intermittence" in electronic equipment caused by overheating of components. Cools components instantly pinpointing faulty capacitors, transistors, oxidized junctions.

8667	16 oz. aerosol	$2.63

SILI-SPRA

High quality silicone lubricant! Handy aerosol features exclusive 3-way valve that applies a light lubricating film that lasts and won't leave a residue buildup. Ideal for home, office or workshop.

10-600	6 oz. aerosol	$1.53

Complete rapid bonding adhesive kit makes it possible to bond surfaces that before could not be bonded: Dupont Teflon, glass, polyethylene, vinyl or silicone rubber. Simply brush CYANO-PREP on surface to be bonded. CYANO-PREP evaporates immediately leaving the surface ready for bonding. Then apply GR-R-RIP!—a drop holds tons. To safely remove excess of adhesive from skin, clothes or tools, use CYANO-SOLV. Kit contains one each of:

(10-115)	GR-R-RIP!	(2 gram tube)
(10-125)	CYANO-PREP	(1 oz. bottle)
(10-130)	CYANO-SOLV	(1 oz. bottle)
10-135	MIRACLE ADHESIVE KIT	$4.95

ALL ITEMS IN KIT AVAILABLE SEPARATELY

CYANO-PREP
CYANO-SOLV

10-125	10-115	10-130
$1.75	$1.99	$1.75

micro-circuits electrically conductive coatings

For Research and Production in: Electronics, Medicine, Aerospace, Electro-Mechanics, Communications

EVERY DESIGN AND RESEARCH ENGINEER SHOULD EVALUATE THESE

TEN BASIC WAYS TO USE OUR CONDUCTIVE COATINGS

How many of **your** problems will they solve?

They are far from complete, but they certainly will suggest new approaches to your problems. The data folders in the Kits list the proper kit materials and suggested methods for solving each type of problem below.

1 Do you want to know exactly when something breaks, stretches, twists, slides, falls down, gets up, expands, shrinks, grows, vibrates, tears, cracks or smiles?

These effects, frequently correlated with an oscillograph record or record of applied force, usually depend upon the breaking of a current path through a conductive film painted on the surface under test.

2 Do you want to be warned or have something happen when it starts to rain, water rises, something boils over, a surface absorbs chemicals or moisture, a surface dries out, or wets its diaper?

These effects, which can be used to change the indication on an ohmmeter or to operate a relay, result from the enormous change in resistance which occurs when a drop of water or other chemical bridges the gap between two electrodes or grids painted on an insulating surface.

3 Do you need an easily-built working model of (or a less-expensive production replacement for) a complex, metallic, current-carrying part such as an antenna element, a fuse clip, a lamp socket, or 1001 other large and small pieces of conducting hardware?

Just make the part out of cardboard, bakelite, plaster of Paris, wood, lucite, glass tubing, or other material which is physically suitable; then brush, dip, or spray on a suitable conductive coating.

4 Do you need closely adhering terminals (temporary or permanent) on any surface for measuring volume or surface resistance, for determining the amount of salt water in a rock sample, or for measuring the capacitance or dielectric constant of materials?

5 Do you want to shield an instrument or component electrostatically or electromagnetically?

Often you can paint the shield right on the plastic case, glass envelope, or other surface.

6 Are you in a hurry to test a design change in a resistor, conductor, or capacitor in a printed or etched circuit; or would you like to draw a complete new printed circuit for your product?

7 Do you need a heating element for a chemical breaker, a crystal oven, a time-delay relay, or an aircraft gadget which needs heating or de-icing?

7 Continued

A wide range of accurately-adjusted resistance paints are available in the S31 KIT, and the instructions permit you to obtain fairly accurate resistance values with a minimum of experience.

8 Without requiring physical contact, would you like to:

See the amplitude or wave form at different points on a vibrating object?

Know when a certain amount of material has accumulated (such as dust on a refrigerator cooling radiator or material in a bin)?

Determine the per cent solids in foamed plastic, etc.?

Determine, rapidly and automatically, whether sheets or separate objects are thick enough, wide enough, or full enough?

These effects can be measured by measuring capacitance or dielectric constant changes with the aid of conductive-paint areas. Depending upon the problem, the effect can be measured on a capacitance bridge, seen on an oscilloscope, or used to vary the frequency of an oscillator.

9 Do you need a rapid method of building up worn conductive surfaces, grounding components, or connecting terminals on a terminal board?

10 Do you have problems involving sorting, timing, synchronizing, reversing, accepting, or rejecting?

Often it can be done by painting one or more conductive areas on a moving surface or object, so that stationary contact fingers will operate a relay or solenoid at the proper time. For example:

A dot of silver Micropaint at the end of a recording tape will operate a reversing mechanism.

Areas of low-cost resistance paint brushed on proper areas on the tops of boxes or other objects according to a pre-determined code will operate solenoids to push them off of a conveyor at the proper place.

A conductive area on a rotating disc or drum, on a tape, or on an object moving along a conveyor provides an easily-modified means of initiating a complex sequence of operating, holding, releasing, timing, counting, alerting, slowing down, speeding up, time delay, and revising functions.

NOTE: The above suggestions are rather general and are for illustration only. Specific applications may be patented or in process of being patented without our knowledge. We are not suggesting infringement of any patent and suggest that possible commercial applications be checked with your patent attorney.

DESCRIPTIONS OF PAINTS LISTED ABOVE

NOTES ON DESCRIPTIONS OF PAINTS: Most of the coatings have been in use (with continuing improvement) for 5 to 20 years. They have many uses which are far removed from the uses which are mentioned. The indicated resistance per square is our production test value. Resistances obtained by the user may be varied by changing the thickness, by absorption into the substrate, by partial dissolving into undercoats or overcoats, etc. Resistance per square is the resistance measured between two opposite sides of a square area of the paint painted between two parallel electrodes of substantially zero resistance. If paint thickness remains constant then resistance is independent of dimensions and a 1″ square will have the same resistance as a 1 mile square.

We recommend a phone call to discuss proposed applications. These paints are usually available in production quantities on one or two day notice. We also have or can make a wide range of other conductive coatings.

SC12, SC13, AND SC15 AIR DRYING SILVER MICROPAINTS. These are highly conductive coatings for "wires," electromagnetic shielding, "soldering" fine wires, contacts on magnetic tape, coating of experimental parts of paper, plastic, wood, etc. to simulate metal parts, and a wide variety of other uses. They have been used by magicians and to indicate the fracture of rocks. Resistance of SC12 is less than 0.2 ohms per square. SC13 is more flexible but less conductive. Good adhesion. Stand 500°F. but soften below this. SC15 dries more slowly than SC12 and is suggested for ruling pen and silk screen application. Solvent SL14 for SC12 and SC13. Solvent SL-2 for SC15.

SC17 FLEXIBLE SILVER MICROPAINT. Very flexible. May be stretched up to 150%. For use on polyethylene, rubber, etc. where there are adhesion and flexibility problems. Has been used for skin contacts in medical tests but we have a superior substitute for this application. Imparts excellent rust-preventive conductive surface on steel for RF gaskets, door closures, etc. Prevents RF leakage at microwave plumbing joints simply by painting over the joints (SC13 is used for the same purpose). Resistance about 0.5 ohm per square or less as applied. Rises to about 10 ohms when stretched 100%. Brush or spray application. Solvent — SL14.

SC20. NEW SKIN CONTACT PAINT BONDS SILVER TO SKIN. New SC20 Silver Micropaint aids in the study of weak and elusive electrical body signals which may yield new discoveries. Accurate detailed recording requires a low level of distortion. Conventional skin-recorder interfaces vary due to skin movement, perspiration, and electrolytic action. The new SC20 silver electrode becomes part of the skin surface. Just paint it on and use within 1-2 minutes. Non-toxic, non-allergenic. No discomfort. Low cost per contact. Lasts up to two weeks with patient or research subject living, normal, active life. Remove with rubbing alcohol. May lead to discoveries based on long-term changes masked by conventional contacts.

RS17 FLEXIBLE SHIELDING MICROPAINT (formerly RS17B). Good adhesion to polyethylene, rubber, etc. Good weather resistance and rust preventive characteristics. Will stretch 30-50%. Uses are somewhat similar to those of SC17 but are determined by its higher resistance of 150 ohms per square or lower and very much lower cost. Spray or brush. Solvent SL14.

RSE22 EPOXY SHIELDING MICROPAINT. Very good adhesion, abrasion resistance, and chemical resistance. Appears to be unaffected by continuous immersion in 10% salt solution at 200°F. Has many applications in forming ground surfaces, shielding, conductive corrosion protection, etc. 200 ohms per square or less. Curing agent (supplied) is mixed in before use. Pot life is 4 to 8 hours. Brush, spray, or dip. Solvents are SE100 (spray) or SE200 (brush).

RS110 AND RSE100 AIRCRAFT ANTI-STATIC MICROPAINTS (RAIN-EROSION-RESISTANT). Both coatings have a unique formulation which yields optimum anti-static characteristics under a wide range of application conditions and techniques. They may be depended upon to perform satisfactorily even when no equipment is available to test them after application. RS110 is a lacquer-base coating. Chief advantage is fast application and drying without curing agents. However customers have reported the service life to be in excess of 2000 hours without apparent loss of effectiveness on slow speed aircraft. RSE100 is an epoxy coating with very important advantages over neoprene anti-static coatings: Requires only two coats, no special primers, easily recoated and repaired. In accelerated laboratory tests under both dry and salt spray conditions RSE100 abrasion resistance equalled or exceeded that of neoprene anti-static coatings. Solvent SE100.

RA-2 ADDITIVE. This is added to commercially available decorative aircraft coatings. It permits decorative coatings to be applied over the black anti-static coatings on radomes and antenna covers without loss of anti-static effectiveness and without static puncture damage to the decorative coatings. RA-2 Additive is being used by U. S. and foreign air lines, aircraft manufacturers, and aircraft electronic manufacturers.

R-SERIES RESISTANCE MICROPAINTS. This is a series of five carefully adjusted resistance paints. It has been estimated that about 4000 ¼-watt resistors can be painted from one 25 cc (1 oz.) bottle. The stock numbers follow: The number following the stock number is the resistance in ohms per square: R01 — 125 ohms (per sq.), R11 — 500 ohms, R21 — 12,500 ohms, R31 — 0.31 megs, R41 — 3.1 megs. The paints may be mixed for intermediate values. By varying the ratio of length to width each stock paint will yield resistors varying from about ⅕th of the indicated value to about 5 or more times the indicated value. Maximum operating temperature is about 250°F. but they will stand much higher temperatures briefly. Brush, spray, ruling pen. Solvent SL14.

UHR-SERIES (ULTRA HIGH RESISTANCE) MICROPAINTS. These seven paints continue above the R-Series in resistance values. Use where a high meg resistor or a slow electrical leak is needed. May be applied with moderate precision with a ruling pen or artists brush. Can replace very expensive high meg resistors in non-critical applications for a fraction of a cent per resistor. Also used to equalize voltage gradients in high voltage insulators, etc. Made with a highly stable, moisture-resistant binder. Solvent SL14.

KONTAKT CHEMIE

Imported from West Germany

Cleaning, Protecting and Insulating Sprays for Electronic and Electrical Production and Maintenance

KONTAKT 60 OXIDE-DISSOLVING
The proven treatment agent for all electrical contact disturbances. Dissolves oxide and sulphide layers, dirt, oils, resins, fats, traces of metal abrasions, etc. . . . leaves a protective microfilm. Eliminates high contact resistances due to atmospheric influences. Effective even under conditions of minimum current flow and lowest contact pressure. Safe on all types of constructional materials . . . plastics, metals, hardboard, etc. Guaranteed trouble-free operation.
6 oz. and 16 oz. aerosol cans with flexible spray tube.
Also available in bulk liters.

KONTAKT
60
KONTAKT

TUNER
600
KONTAKT

NEW!
TUNER 600 SUPER CLEANER
Immediately eliminates contact disturbances on channel switches without changing the capacitance and frequency response. Even sensitive tuners are not de-tuned. Eliminates disassembly, thereby reducing service time. Highest operational safety . . . non-conductive. Harmless, non-flammable, instant drying, no residue.
6 oz. aerosol cans with flexible spray tube.

KONTAKT 61 "The Preserver" ANTI-CORROSION LUBE
A world renowned self-cleaning, anti-corrosion agent, formulated principally for application on, and precision lubrication of, new non-oxidized contact surfaces. Reduces mechanical abrasions of all surfaces by several orders of magnitude. Immeasurably increases service life and is perfectly safe on all construction materials. Guaranteed trouble-free operation.
6 oz. and 16 oz. aerosol cans with flexible spray tube.
Also available in bulk liters.

KONTAKT
61
KONTAKT

KONTAKT
WL
KONTAKT

KONTAKT WL CLEANS AND DEGREASES
Fast, efficient results from KONTAKT'S multi-purpose solvent mix. Cleans and degreases badly soiled electrical contacts. Aids the excellent cleaning effect of "KONTAKT 60" by rapidly removing dissolved oxide particles. Safe, will not attack constructional materials . . . plastics, metals, hardboard, etc.
6 oz. and 16 oz. aerosol cans with flexible spray tube.

NEW!
KONTAFLON 85 "Greasefree Lubricant"
A suspension spray containing particles of polytetrafluoride ethyl (PTFE) as an effective constituent. It is a greasefree, waxlike lubricant and repelling agent practically invisible to the eye. It can be applied in all cases where oily substances (mineral or silicon oils) cannot be used, and where graphite or molybdenum sulphide cause excessive discoloration. Ideal for universal use.
6 oz. aerosol cans with flexible spray tube.

KONTAFLON
85
KONTAKT

POLITUR 80 CLEANS AND POLISHES
Cleans and polishes in one process. For all wood, plastic or painted surfaces, and colors. Conceals and eliminates minor scratches and produces a high-gloss, durable coating.
6 oz. aerosol cans

PLASTIC SPRAY 70 INSULATING LACQUER
Resistant to dilute acids, caustic solutions, alcohol, oils, moisture and dust. Durable through -70°C to 100°C temperature extremes. High quality transparent coating with a wide range of applications.
6 oz. and 16 oz. aerosol cans

PLASTIK
70
KONTAKT

ISOLIER SPRAY 72 INSULATING OIL
High grade, high viscosity with a dieletric value of 20 Kv/mm. Silicone basis, will not dry out or cause sticking of parts. Stable through -50°C to 200°C temperature extremes. Moisture repellent and non-toxic. Contact surfaces, accidentally sprayed, will not be adversely affected.
6 oz. aerosol cans with flexible spray tube.

FLUID 101 MOISTURE PENETRATOR
Displaces moisture, penetrates under water and protects against corrosion! FLUID 101 assists wherever moisture is harmful. It prevents interruptions in electrical and electronic equipment caused by water condensation. Wet distributors, ignition cables or spark plugs are no longer a problem. Ideal for marine applications.
6 oz. and 16 oz. aerosol cans

SPRÜHÖL
88
KONTAKT

NEW!
OIL SPRAY 88 HIGH GRADE OIL
Lubricates the most inaccessible parts, simplifying maintenance. Acid free, remains fluid in -40°C to 175°C extremes of temperature. Inhibits oxidation.
6 oz. aerosol cans with flexible spray tube.

COLD SPRAY 75 INSTANT COLD
Cools to -42°C for rapid location of thermal breaks when repairing electronic equipment, saving time of dismantling and measurement of individual components. Prevents heat damage during soldering. Ideal for use in applications requiring rapidly reduced temperatures or freezing. Non-toxic, non-flammable and chemically inert; harmless to components.
6 oz. and 16 oz. aerosol cans with flexible spray tube.

KÄLTE
75
KONTAKT

ANTI STATIK SPRAY 100 STATIC ELIMINATOR
Prevents build up of static charges on all plastic products. Its uses include cleaning and preserving valuable recordings. Prevents dust deposits, formed as a result of static charges, on plastic products, remaining effective over a long period. Excellent for the treatment of television picture tubes and protection masks.
2½ oz. and 6 oz. aerosol cans.

VIDEO-SPRAY 90 MAGNETIC HEAD CLEANER
Dissolves even hardened dirt from the gaps of magnetic heads on video and sound tape recorders and data processing equipment. It is completely harmless, electrically non-conductive, non-flammable, dries quickly without leaving a residue and offers a high degree of safety in use.
2½ oz. and 6 oz. aerosol cans with flexible spray tube.

VIDEO
90
KONTAKT

GRAPHIT
33
KONTAKT

GRAPHIT SPRAY 33 CONDUCTIVE COATING
Provides a conductive and durable coating on non-conductive surfaces directly from the spray can. Its uses include the repair and renovation of damaged screens of cathode ray tubes. Eliminates static charges . . . acts as an effective screen. Adheres to all smooth surfaces.
16 oz. aerosol cans

LOTLACK SK10 SOLDERING VARNISH
A protective coating/lacquer which prevents the oxidation of PC boards, thus permitting increased shelf-life. Also acts as a soldering flux with excellent soldering capabilities. SK10 is equally suitable for use in manufacturing and servicing.
16 oz. aerosol cans

LOTLACK
SK10
KONTAKT

POSITIV 20 PHOTO COPYING PAINT
Positive process coating for printed circuits for use by technicians and others concerned with the fabrication of single, or small runs of printed circuits. Transparent drawings of printed circuits can be copied directly on to a board coated with Positiv 20. The high resolution gives clear sharp edges. A large exposure range provides the required safety.
6 oz. aerosol cans

P.C. BOARDS

We are manufacturers of quality printed circuit boards with many years of experience, and our service has satisfied numerous customers from Coast to Coast.

We are specializers in many diverse industries; such as Medical Electronics, Electronic Security, Instrumentation, Navigational, Aviation, Emergency Lighting, Computers, as well as many others.

With extensive experience, know-how, and modern facilities backing our organization, we are confident that we can supply and fulfill your requirements.

Some of our more general capabilities include:

- *Single Sided*
- *Double Sided*
- *Plated Thru*
- *Tape Drilling*
- *Pierce & Blanking*
- *Gold Plating*
- *Nickel Plating*
- *Tin Plating*
- *Lead-Tin Plating*
- *Reflow Solder*

Whether you have a requirement for prototypes or production quantities, or wish further information-call collect. We are willing and able to serve you.

Prices are subject to change.

Continental Specialties PROTO BOARD-100 is a complete Mini-Breadboard Budget Kit with full 10 IC capacity.

The PB-100 is a low cost, big 10 IC capacity breadboard kit with all the quality of Continental Specialties QT Sockets and the best of the Proto Board series. Each kit is complete down to the last nut, bolt and screw, including 2 QT-35S Sockets; 1 QT-35B Bus Strip; 2 5-way binding posts; 4 rubber feet; screws and easy assembly instructions. Measures 4.50″ (114.3mm) wide x 6.00″ (152.4mm) long x 1.35″ (34.3mm) high. Order today off-the-shelf from CSC or your local distributor.

PROTO BOARD 203 offers Power for The Professional. Breadboard and test with 5 Volt, 1 AMP regulated power supply.

The PB-203 is a total, ready-to-use power breadboard Prototest device with a built-in regulated, short-proof power supply. Just plug it in and start building! 2 extra floating 5-way binding posts are included for external signals. Self-contained, with a power switch indicator lamp and power fuse. Full 24 14-pin DIP capacity in an attractive two-tone quality case. All metal construction, measuring 6.60″ (168mm) wide x 9.75″ (248mm) long x 3.25″ (82.6mm) high. Weighs 5 lbs. Order today off-the-shelf from CSC or local distributor.

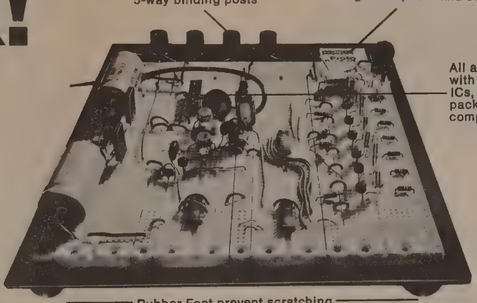
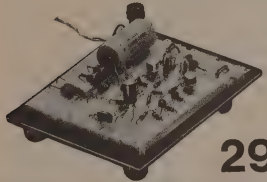
CIRCUITS YOU THINK!

4 Versatile Breadboard Prototest Devices eliminate soldering and patch cords!

Continental Specialties PROTO BOARDS let you make all circuit and power interconnections with common #22 AWG solid hook-up wire, while power distribution buses make wiring a snap. Aluminum base plates offer solid work surfaces for perfect ground plane and rubber feet prevent scratching. Each PROTO BOARD features one or more 5-way binding posts to tie into system or power supply ground. All are compatible with digital or linear ICs in TO5s, DIP packs and discrete components. And each is completely assembled, ready-to-use. Order today off-the-shelf from CSC or your local distributor.



Each has one or more 5-way binding posts
Aluminum base is perfect ground plane and solid surface
All are compatible with digital/linear ICs, in TO5s, DIP packs and discrete components
All connections made with common #22 AWG hook-up wire
Rubber Feet prevent scratching



29^{95}

Continental Specialties

PROTO BOARD No. 101

This compact, inexpensive model features 10 14-pin DIP capacity and measures only 5.8″ long x 4.5″ wide. Order today off-the-shelf from CSC or your local distributor.

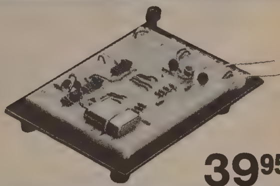
Add $2.00 for shipping and handling.

Continental Specialties

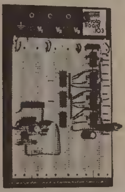
PROTO BOARD No. 102

Here is another compact model, but with 12 14-pin DIP capacity, measuring 7″ long x 4.5″ wide. It offers considerably more versatility than PB-101. Order today off-the-shelf from CSC or your local distributor.

Add $2.00 for shipping and handling.



39^{95}



59^{95}

Continental Specialties

PROTO BOARD No. 103

The PB-103 offers 2,250 solderless tie points, and four 5-way binding posts. This mid-size PROTO BOARD has a big 24 14-pin DIP capacity, and measures 9″ long x 6″ wide. Order today off-the-shelf from CSC or your local distributor.

Add $2.50 for shipping and handling.

Continental Specialties

PROTO BOARD No. 104

This big, versatile model features 3,060 solderless tie points, four 5-way binding posts, 32 14-pin DIP capacity, and measures 9.5″ long x 8″ wide. A big model for big testing jobs. Order today off-the-shelf from CSC or your local distributor.

Add $2.50 for shipping and handling.

Continental Specialties LOGIC MONITOR brings ICs to life faster than a scope and safer than a voltmeter.

The amazing Continental Specialties LOGIC MONITOR is self-powered, self-contained and pocket-size. It requires no adjustments or calibrations as it simultaneously displays static and dynamic logic states of DTL, TTL, HTL or CMOS DIP ICs. Now you can watch your signals work their way through counters, shift registers, timers, adders, flip-flops, decoders, even entire systems. High intensity LEDs turn on when lead voltages exceed the 2V threshold. *No power supply is needed!* Power-seeking gate network locates DIP supply leads and feeds them into the LOGIC MONITOR. Forget about grounds, pin counting or sync polarity. Simply clip the LOGIC MONITOR to any DIP IC up to 16 pins. Precision plastic guides and a flexible plastic web* insure positive connections between non-corrosive nickel/silver contacts and the IC leads. Logic levels appear instantly on 16 large (.125" dia.) high intensity LEDs. Logic "I" (high voltage)-LED ON. Logic "O" (low voltage or open circuit)-LED OFF. Order today off-the-shelf from CSC or your local distributor.

Add $2.50 for shipping and handling.

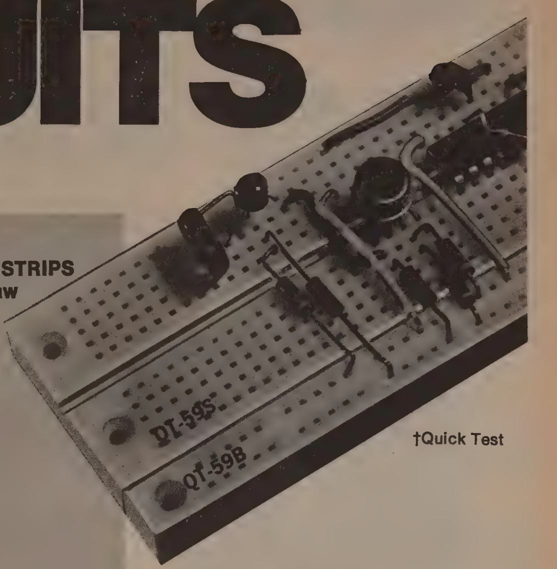
CIRCUITS YOU THINK!



†Quick Test

Continental Specialties QT† SOCKETS and BUS STRIPS let you breadboard circuits as fast as you can draw them! Plug-in. Wire. Test. Modify. Build. All without patch cords or solder!

Keep going non-stop, from idea stage to final design, using the same components over again without bending, twisting or loading with solder. The fast, reliable QTs let you try out new ideas or rejuvenate old ones with complete safety to your discrete and IC components and your fingers.

SIMPLE MOUNTING

Mounting holes in the housing let you top mount to any flat surface with 4-40 flat head screws, or 6-32F self-tapping screws for behind-the-panel mounting.

ACCEPTS ALL STANDARD COMPONENTS

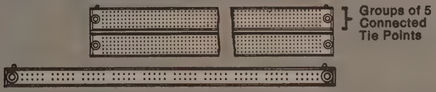
QTs conform to 1/10" grid and are DIP compatible. ICs, diodes, resistors, capacitors, transistors, etc. are plugged right into the socket and/or strip, without messy, time-consuming soldering.

HOOK-UP

All you need is a wire stripper and #22 AWG solid hook-up wire. Connect power and ground leads to your bus strip. Plug in your ICs, transistors, resistors, etc. Now interconnect components with #22 wire. Connect a signal source to bus strip or directly to input point of your circuit. Each socket has *5 tie points per terminal;* each bus strip has *2 separate rows of interconnecting terminals.* Turn on the power and signal source. Hook-up a scope probe, counter, etc. Then, if you have to add a wire, need another IC or component — just plug it in. You'll never burn your fingers or get solder shorts. And you don't need any special patch cords, either.

INTERCONNECTIONS

Each terminal consists of 5 connected solderless tie points formed from a prestressed, spring loaded noncorrosive alloy to insure secure mechanical and low resistance electrical connections.



2 Buses of Interconnected Terminals—5 Tie Points Each

Simply push in your lead, wire or component and you've got a connection, quickly and easily, without damage to either the socket or your components. It's that simple!

All Sockets are 1.32" wide. All Bus Strips are .36" wide. All Sockets and Bus Strips are .33" thick. And all are great for high temperature operation — for worst case circuit design to 100°C.

	Length	Hole-to-Hole	Terminals	Unit Price $
QT-59S	6.5"	6.2"	118	12.50
QT-59B	6.5"	6.2"	20	2.50
QT-47S	5.3"	5.0"	94	10.00

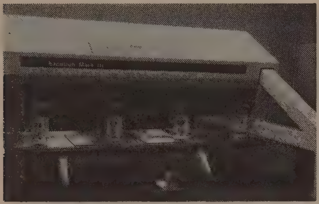
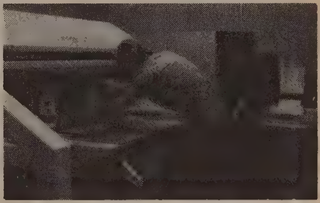
ENGINEERING

Over twenty years of experience assures compatability inspection of all incoming artworks. The chemical lab monitors plating solutions for dependable process control.

QUALITY CONTROL

Competent employees and the latest in equipment and procedures in both in-process inspection and final inspection give you the product quality you expect.



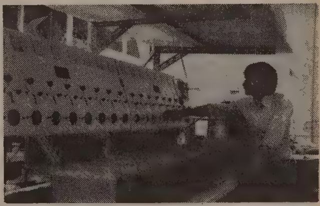


DRILLING

Defiance was one of the first independent companies to employ numerical control drilling exclusively. We will compare drilling capability with anyone without hesitation.

IMAGE DEPARTMENT

We utilize both the screening and dry film processes. Whether the requirements are simple or difficult, we are competitive due to our flexibility of equipment.



PLATING

Tight process control and trained personnel assure high quality. The gold plating tanks contain individual rectifiers per panel to more accurately control thickness.

FABRICATION

A complete tool and die department including EDM equipment give us a competitive edge in both cost and delivery. High volume runs are blanked. Low volume orders are routed.

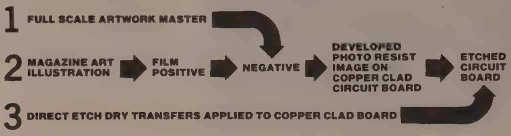
printed circuit kits••• DATAK

new photo etch kit.........Makes printed circuits THREE WAYS

Duplicate industrial techniques to make one or hundreds of identical printed circuits. Remarkable **POS-NEG**™ (pat. pend.) system will photocopy 1:1 art directly from a magazine page. Make 1:1 artwork masters, negatives, positives. Sensitize ordinary copper clad circuit boards: use your negative to expose; then develop and etch the final circuit. **No camera. No darkroom.** No tracing, pasting or film cutting. All materials supplied except photoflood bulb available at any camera store.



1 FULL SCALE ARTWORK MASTER
2 MAGAZINE ART ILLUSTRATION
FILM POSITIVE
NEGATIVE
DEVELOPED PHOTO RESIST IMAGE ON COPPER CLAD CIRCUIT BOARD
ETCHED CIRCUIT BOARD
3 DIRECT ETCH DRY TRANSFERS APPLIED TO COPPER CLAD BOARD

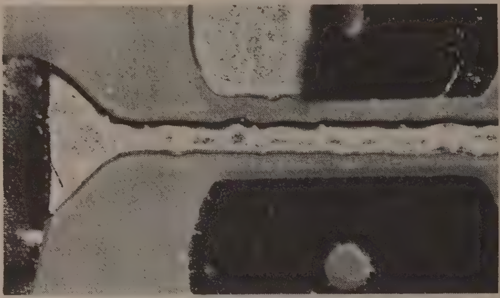
KIT CONTAINS: 5″x6″ steel printing frame with plate glass and backboard, 4 sheets 5″x6″ photocopy film, yellow filter, chemicals for 1 pint film developer and 1 pint film fixer, 5″x6″ copper clad board, spray can photo etch resist, 1 pint resist developer, 2 sheets 8½″x11″ layout film, 1 roll 1/16″ and 1 roll 1/32″ printed circuit tape, 8 sheets dry transfer direct etch PC patterns including pads, transistors, round can and flat pack ICs, DIP ICs, edge card connectors, lines, circles, jogs, etc., ¼ lb. anhydrous ferric chloride to make 1 pint etchant, instructions.

ER-4 COMPLETE PHOTO ETCH KIT $24.95

direct etch printed circuit kit

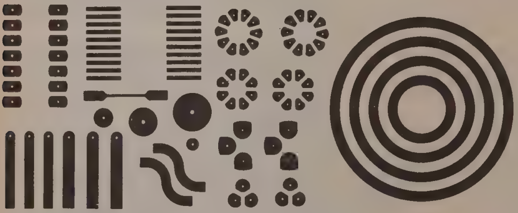
This one step kit uses a unique dry transfer resist that etches razor-sharp patterns. Lay out circuits directly on the copper board by rubbing down dry transfer patterns and lines. Connect with resist tape or leave unconnected for breadboards. Blow-up illustration shows 2 oz. copper circuit board **made only with materials in kit.** Black dry transfer resist is partly removed to show etched copper. Pattern is .015″ squeeze-through wire transferred between 2 DIP pads. Pad edges are spaced .030″ apart.

KIT CONTAINS: two 3″x4½″ and two 2¼″x3″ copper clad boards, 8 sheets direct etch PC patterns, 2 rolls PC resist tape (see ER-2 for description of patterns and tape), ¼ lb. anhydrous ferric chloride (makes 1 pint), combination storage box and etch tray, instructions.



ER-1 COMPLETE DIRECT ETCH KIT $5.95

photo etch and direct etch refill kits



DIRECT ETCH RESIST PATTERNS

8 sheets 3″x5″ 1:1 patterns include lines, circles, jogs, squeeze-throughs, TO-3 & TO-18 transistors, TO-99, TO-100, DIP & flatpack ICs, donut pads, roll of 1/16″ and 1/32″ resist tape. Withstands ferric chloride, ammonium persulfate, peroxide and other etch systems.

ER-2 DIRECT ETCH RESIST PATTERNS $3.39

DRY CONCENTRATED ETCHANT

¼ lb. anhydrous ferric chloride in vapor tight package makes 1 pint etchant, enough for 200 sq. in. of copper board. Costs less than liquid etch solutions.

ER-3 DRY CONCENTRATED ETCHANT $1.25

POS-NEG™ PHOTOCOPY FILM

Polyester base film makes negatives or positives directly from opaque or translucent art in one step. Handle in subdued light. Expose with #2 photoflood.

ER-5 SIX SHEETS 5″x6″ POS-NEG FILM $3.39

FILM PROCESS CHEMICALS

3 chemical packets make 1 pint litho film developer and 1 pint acid fixer. Handles 15 sheets copy film.

ER-6 FILM PROCESS CHEMICALS $1.79

PHOTO RESIST SPRAY

Photosensitive PC board coating. Unexposed coat is dissolved by resist developer. Exposed areas remain to act as an etch resist. Coats up to 400 sq. in.

ER-7 PHOTO RESIST SPRAY (2.5 oz. net wt.) $2.95

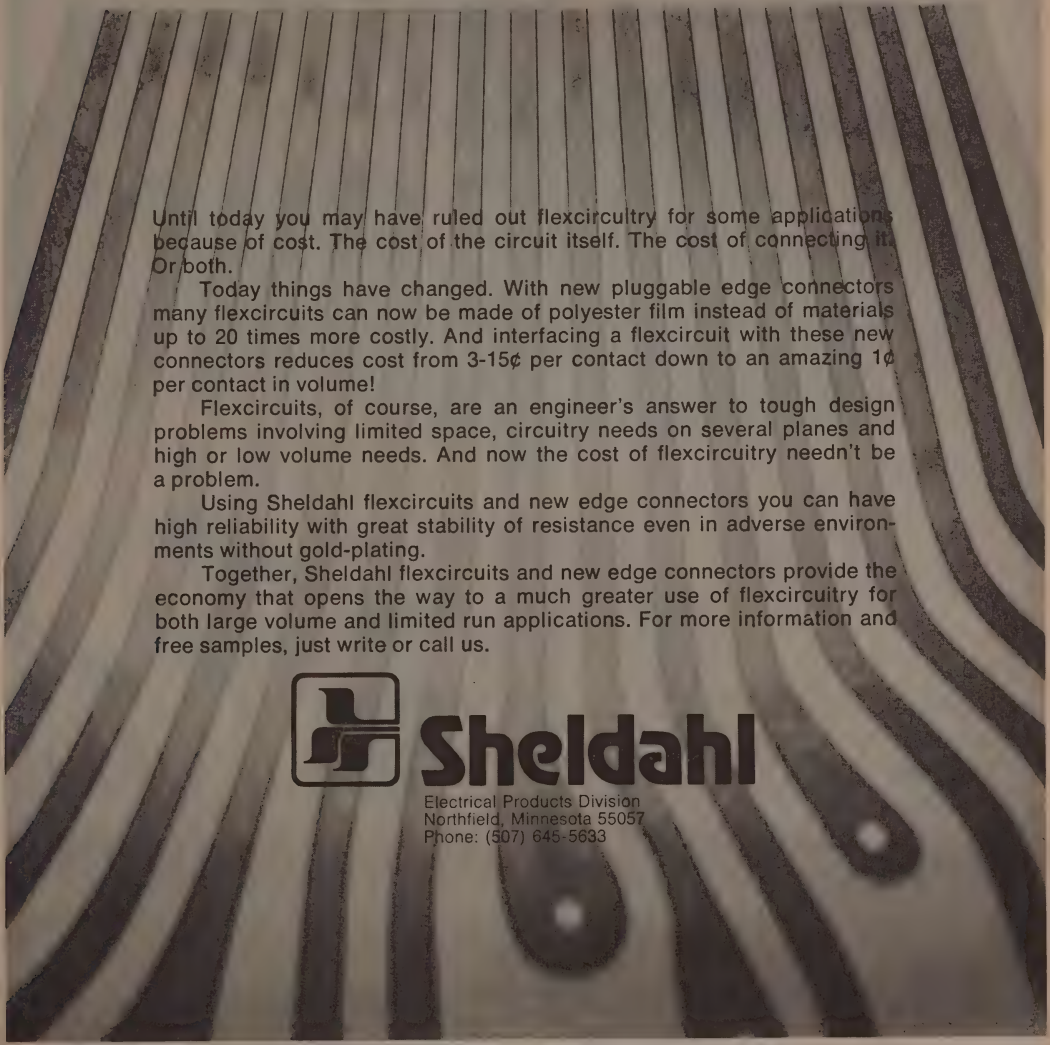
PHOTO RESIST DEVELOPER

Solvent blend develops exposed photoresist. Use with ER-7 spray resist.

ER-8 RESIST DEVELOPER (16 fl. oz.) $2.95

the DATAK corporation • 65 71st Street • Guttenberg, N.J. 07093

Now Sheldahl flexcircuitry is affordable for even more applications.



Until today you may have ruled out flexcircultry for some applications because of cost. The cost of the circuit itself. The cost of connecting it. Or both.

Today things have changed. With new pluggable edge connectors many flexcircuits can now be made of polyester film instead of materials up to 20 times more costly. And interfacing a flexcircuit with these new connectors reduces cost from 3-15¢ per contact down to an amazing 1¢ per contact in volume!

Flexcircuits, of course, are an engineer's answer to tough design problems involving limited space, circuitry needs on several planes and high or low volume needs. And now the cost of flexcircuitry needn't be a problem.

Using Sheldahl flexcircuits and new edge connectors you can have high reliability with great stability of resistance even in adverse environments without gold-plating.

Together, Sheldahl flexcircuits and new edge connectors provide the economy that opens the way to a much greater use of flexcircuitry for both large volume and limited run applications. For more information and free samples, just write or call us.

SGL PRINTED CIRCUITS

PRINTED CIRCUIT BOARDS

- **SINGLE SIDED**
- **DOUBLE SIDED**
- **PLATED THROUGH HOLES**
- **MEET IPC AND MIL SPECS**
- **FAST PROTOTYPE DELIVERY**

SGL Printed Circuits, with long experience and complete knowledge of latest production techniques, is a leader in printed circuit technology. Our modern, well-equipped facilities provide a quality manufacturing capability that assures you printed circuitry that meets your most exacting requirements.

The order you place with us is processed by skilled technicians whose standards of quality workmanship produce a superior product with on-time delivery. We maintain stocks in XXXP, FR-3, FR-4, G-10 and G-11, enabling us to assure supply and offer prompt shipments.

If you have a current need for printed circuits, we would appreciate your consideration of our company. If your specifications are fully developed, send them to us for quotation. They will receive prompt attention. If a personal visit to discuss the development or technical requirements of your printed board would be helpful, call us or write at the address below.

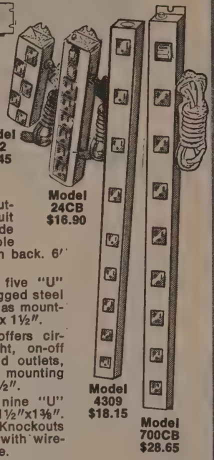
SGL WABER Electric

"U" Gr. OUTLET STRIPS And WHEELED CARTS

Model 900CB $23.15



SGL WABER pre-wired outlet strips provide multiple outlets with switch, pilot light, and circuit breaker included in most models. Shown here are typical units from over 200 models available. Heavy-duty components are housed in sturdy steel cases. Rated at 15 amperes, 120 volts. Finished in hammertone gray.

Model 900CB — This unit has six outlets, lighted rocker switch, and circuit breaker, Made to fit standard 19″ wide relay rack. Other models available with controls in front and outlets in back. 6′ cord-set.

Model 602 — Highly useful where five "U" ground outlets only are needed. Rugged steel case. Tough 6′ neoprene cord-set. Has mounting ears and measures 8⅝″ x 2⅜″ x 1½″.

Model 24CB — This popular unit offers circuit breaker protection, pilot light, on-off switch, six heavy duty "U" ground outlets, tough 6′ neoprene cord-set, and mounting ears. Dimensions: 13⅛″ x 2⅜″ x 1½″.

Model 4309 — UL listed unit has nine "U" ground outlets and measures 36″x1½″x1⅜″. Internally wired, ready to wire-in. Knockouts on either end and leads provided with wire-nuts for fast installation. Steel case.

Model 700CB — Eight rugged "U" ground outlets in a steel case measuring 49″x2″x1½″ with lighted rocker switch and circuit breaker protection. 6′ neoprene cord-set.

Any of the above 6′ cord-set models can be supplied in a 15′ length at an additional cost of $2.10.

SGL WABER SCOPE CART AND WHEELED CARRIER

LOW 25 — Welded steel construction. Adjustable stops. 3″ swiveling casters. Complete with electrical outlet strip. Size: 21Wx31Lx33½″H. Top shelf inclines 20°. 360 lb. capacity.

LOW 18—One of the most versatile carriers available. Ideal for audio-visual, hospital, labs, etc. Constructed of 1″ square steel chrome plated tubing. 5″ casters. Size: 22Wx29Lx42½H. Includes a rugged electrical outlet strip. 500 lb. capacity.

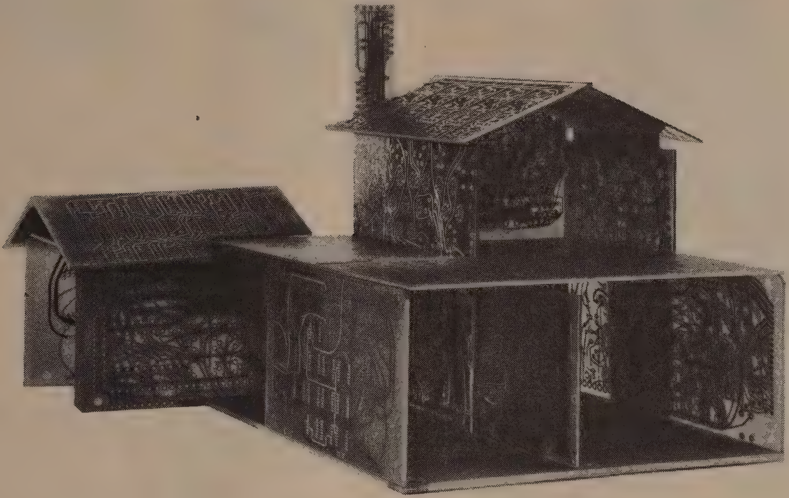
TRW® CINCH-GRAPHIK

High volume, production of P.C. boards for automotive, data processing, communications, instrumentation, aerospace and military applications.



Single and double-sided printed circuit boards and
Precision multilayer printed circuit boards with plated-thru holes

At TRW/Cinch Graphik you'll find the industry's most modern facilities combined with the industry's most knowledgeable, experienced people . . . the people that have made TRW/Cinch Graphik foremost in its field. These are the people who have devised and developed the innovations and techniques that enabled TRW/Cinch Graphik to develop the first through-hole plating and the first multilayer boards with 36 layers on automated equipment.

Perfection is a creed at TRW/Cinch Graphik . . . out of 800 people, one in every five is directly involved in inspection and quality control. To these people, meeting the requirements of Military Specifications such as MIL-P-55110 and MIL-S-9858 has become second nature.

TRW/Cinch Graphik can handle your largest delivery requirements . . . our 125,000 square foot plant houses the most advanced precision production equipment in the industry. For high volume commercial, industrial, or military printed circuit boards, look to the leader in printed circuitry . . . look to TRW/Cinch Graphik.

Contact your nearest TRW/Cinch District Office listed in the manufacturers section, or contact TRW/Cinch Graphik, an Electronic Components Division of TRW Inc., 200 South Turnbull Canyon Road, City of Industry, California 91744. Phone (213) 333-1201.

Vector

VECTORBORD®—MICRO-VECTORBORD® PHOTO SENSITIZED BOARD

Vectorbord® and **Micro-Vectorbord®** prepunched terminal boards are time, work and money saving materials used throughout the electronic industry. Fire retardant material is precision punched in a wide variety of sizes, hole patterns, and thicknesses for later installation of terminals and components. Vector terminals in solder and wrapped wire models are available to fit all hole sizes. Pattern "A" or "AA" is good for experimental or other work where space is not critical. Pattern "B" is useful for work with small components such as resistors and capacitors. Pattern "G" is particularly useful for transistor usage. Patterns "H" and "P" are specially designed for use with integrated circuits and devices packaged with leads on 0.1 in. multiples.

Special sizes and hole layouts can be made to order if one of the standard catalog items does not meet requirements. When ordering special size boards the following MAXIMUM BOARD WIDTHS apply:

Pattern "A" in phenolic & epoxy paper or glass laminates: 29"
Pattern "B" all materials: 6"
Pattern "G" in phenolic & epoxy paper: 20". In epoxy glass: 16"
Pattern "H" in epoxy glass: 8.51" Pattern "P": 8.50"

Phenolic: MIL Spec PBE-P per MIL-P-3115 NEMA grade FR2. Copper-clad phenolic meets NEMA FR2 and is 1 oz.
Paper Epoxy: MIL Spec P-22324 type PEE NEMA grade FR3. Copper-clad FL-PX per MIL-P-13949E NEMA grade FR3.
Epoxy Glass: MIL Spec MIL-P-181776 type GEE NEMA FR4 and G-10. Copperclad MIL Spec 13949E type FL-GF-NEMA grade FR4 and G-10.

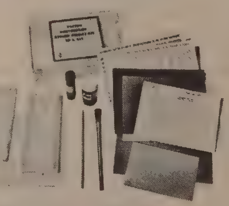
NEW — POSITIVE ACTING PHOTO SENSITIZED COPPER CLAD BOARD FOR FASTER, EASIER ETCHED CIRCUITS

POSITIVE PHOTO SENSITIZED COPPER-CLAD BOARD



32X POSITIVE PHOTO RESIST KIT

New Vector positive acting coated photosensitized board speeds etched circuit manufacture because boards are coated with positive acting resist. Positive artwork is used for the circuit master pattern making use of readily available positive drafting aids. No reversing step required. A finished etched circuit can be made in less than an hour and boards etch in any common etchant. Vector postive acting developer must be used after exposure of the boards under U.V. light source such as a photo flood lamp or sunlight.

Kits 32X or 32XA are recommended for trial evaluations of the system; later, purchase only boards and developer.

ORDERING INFORMATION

32X Kit: Contains 1 board 4½"x6½"x1/16" coated 2 sides; one 2.73"x 4½"x1/16" board coated 1 side; etching chemical and box; artwork patterns; developer; glass pressure plate; complete instructions.

32XA Kit: Contains above items plus 1 board 8"x9"x1/16" coated 1 side; 1 board 4½"x6½"x1/16" coated 1 side; 1 board 4½"x7¼"x1/16" coated 1 side. Larger artwork assortment, more chemical.

BR27-3 RECEPTACLE MOUNTED CARD GUIDE (on R630 Receptacle with 2.73 in. wide Plugbord)

PLUGBORDS FOR GENERAL USE WITH CONTACTS
But Without Matrix or Circuit Patterns

Use for building prototype, test and short run plug-in circuits with these Plugboards because almost any component from DIPs to large resistors can be mounted anywhere on the boards. Boards have an overall grid of prepunched holes, either 0.042 in. dia. on 0.1 in. centers (Pattern "P"), 0.062 in. dia. on alternate 0.1 in. centers (Pattern "G"), or 0.062 in. dia. on 0.1 in. centers (Pattern "H"). Boards are available with varied connector arrangements and mating connectors are listed. Back to back contacts on each etched side terminate in independent hole pads. Most boards have holes for attaching card ejectors.

CONTACT SPECIFICATIONS. Etched contacts:
Epoxy glass Plugbords -- 2 oz. copper 0.0001 in. nickel, 0.00002 in. gold.
Phenolic Plugbords -- 1 oz. copper solder coated.

Quality flame-retardant 1/16" thick board materials are the same as those used for Vectorbord® and Micro-Vectorbord®, see preceding page. Terminals to fit. See our pages Sect. 2100

RECOMMENDED CARD CAGES See our pages Sect. 1400
For above Plugbords: 4.5"x6.5" - CCK3 or CCK3P; 4.5"x4.5" - CCK13A or CCK13AP; 7.98"x9.6" - CCK17; 4.5"x9.6" - CCK4, CCK14 or CCK14P.

RECEPTACLE MOUNTED CARD GUIDES

The BR27 Series Card Guides provide rugged support for 1/16 in. free-standing circuit boards and sure guidance while engaging board and receptacle. This arrangement is commonly found on "mother boards" and in units where space is at a premium. Package quantity all catalog numbers: 2 guides; 2 screws, 4/40; Pan Hd., 3/4 in. long; 2 flat washers; 2 lock washers; 2 hex nuts, 4/40. In bulk quantities (more than 50 prs.) fasteners packaged separately from guides. Material is aluminum alloy, clear anodized.

PLUGBORDS WITH ETCHED TINNED PADS AND BUSES

Use for prototype, test, and short run plug-in circuits. All boards have an overall hole grid of 0.042 in. holes on 0.1 in. centers (Pattern "P"). All etched circuitry above contact area is tinned for easy soldering. Boards are available with varied contact arrangements and mating connectors are listed. Back to back contacts on each etched side terminate in independent hole pads.

3677, 3797 and 3795 SERIES

These Plugbords have etched tinned buses, interleaved between pad areas. All models have tinned 3-hole pad groups for easy component mounting and interconnection. DIPs or components may be soldered directly to pads, or terminals installed in pads. Socket tabs may also be attached to the pads to facilitate making component changes. The heavy etched and tinned interleaved ground and voltage buses make complicated circuit construction quite easy, while providing great flexibility. The 3677 series has 96 individual pads for mounting T0-5 and T0-18 transistors or round case integrated circuits.

4112 SERIES

These Plugbords have groups of 3-hole pads, interleaved "zig-zag" voltage bus, plus an overall etched ground plane on opposite side. The "zig-zag" design permits installed pins to connect or bypass the bus as desired. Reduced impedance and noise can be achieved with addition of Vector's double overhead trolley bus. DIPs or components may be soldered directly to pads, or terminals installed in pads. Socket tabs may also be attached to the pads.

CONTACT SPECIFICATIONS. Etched contacts:
Epoxy glass Plugbords -- 2 oz. copper 0.0001 in. nickel, 0.00002 in. gold.
Phenolic Plugbords -- 1 oz. copper solder coated.

Quality flame-retardant 1/16" thick board materials are the same as those used for Vectorbord® and Micro-Vectorbord®, see preceding page. Terminals to fit. See our pages Sect. 2100

MATRIX PLUGBORDS

All models listed have an overall grid of 0.042 in. dia. holes on 0.1 in. centers (Vector "P" Pattern). They provide a cost-saving approach to manufacture of plug-in circuit boards for small to medium quantity requirements. Wiring time is reduced because of the provided 2 oz. copper tinned etched conductors running vertically ("X") and horizontally ("Y") on some models. On the "X" side the lines are broken to permit mounting 14-pin DIPs. 16- and 24-pin DIPs can also be mounted by cutting the lines with Vector P139 Line Cutter or a hobby knife. Connections between board sides may readily be accomplished with any Vector pins for 0.042 in. holes and solder preforms which drop over the pins or Spring Bus Links T112. Boards are furnished with transparent layout paper printed in contrasting colors for "X" and "Y" sides. Board materials are 1/16 in. thick flame-retardant epoxy paper or epoxy glass. Card edge etched contacts are nickel plated and gold flashed. 3474 series has removable reinforcing aluminum "Kardej" on 3 sides which "tracks" in guides for 1/16 in. cards.

CONTACT SPECIFICATIONS. Etched contacts:
Epoxy Glass Plugbords – 2 oz. copper 0.0001 in. nickel, 0.00002 in. gold.
Phenolic Plugbords – 1 oz. copper solder coated.

Board Size	Material	Matrix	Part No.	Contacts - Etched Gold Plated No.	Spacing	Mating Connectors Solder Tail	Wrapped Tail
4.5"x6.5"	Epox.Glass	Y	3719-2	72	.1	----	R636-1
4.5"x6.5"	" "	X-Y	3719-3	72	.1	----	R636-1
4.5"x6.5"	Epox.Paper	X-Y	3474	44	.156	R644	R644-3
4.5"x6.5"	" "	Y	3474-3	22	.156	R644	R644-3
4.5"x6.5"	Epox.Glass	Y	4050-1	44	.156	R644	R644-3
4.5"x6.5"	" "	X-Y	4050-2	44	.156	R644	R644-3

Quality flame-retardant 1/16" thick board materials are the same as those used for Vectorbord® and Micro-Vectorbord®, see preceding page. For terminals for boards listed this page, see our pages Sect. 2100

WIRE WRAPPABLE PLUGBORDS

Vector wire wrappable Plugbords are furnished with an overall grid of 0.042 in. holes on 0.1 in. centers, tinned interleaved buses, and ground planes on one side of some models. DIP sockets and wire wrappable terminals or socket pins may be installed wherever required and connected however required. "Free" board areas without buses are provided on all models for mounting discretes or other large components. All boards are flame-retardant epoxy glass and furnished with the most popular edge connectors, nickel plated and gold flashed. Ejector holes are provided on all models, and a full line of supporting compatible card and module cages is available from Vector. "Special" features on some models are:

GROUND PLANES -- A heavy overall 2 oz. tinned copper area on one board side can be used to reduce noise and transients, and to provide low impedance when used with buses on opposite side. A copper-free area surrounds each hole in the ground plane so installed terminals may be connected as required to one, or both, board side(s) as required.

ZIG-ZAG BUSES (on 4066 Series) -- Two uniquely configured independent bus paths accommodate terminal tails for connections as required. Use of high capacitance Vector double overhead trolley bus series with zig-zag bus lowers impedance for high frequency circuits, such as encountered in ECL 10,000 series logic.

CONTACT SPECIFICATIONS. Same as listed for Matrix Plugbords.

Board Size	Part No.	No Cont.	Spacing	Gnd. Plane	No. 14-p DIPs Accom.	No. Independ. Buses Wiring Side	Component Side	Mating Connectors Solder Tail	Wrapped Tail
4.5"x9.6"	3682	44	.156	No	54	2	---	R644	R644-3

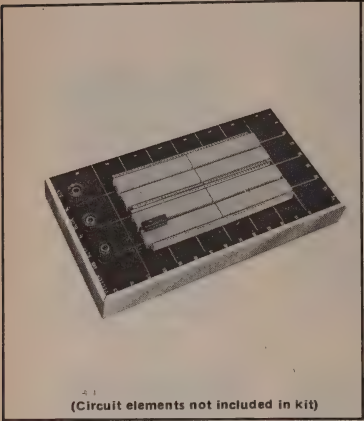
RECOMMENDED CARD CAGES See our pages Sect. 1400
For above Plugbords: 4.5"x6.5" - CCK3 or CCK3P; 4.5"x4.5" - CCK13A or CCK13AP; 7.98"x9.6" - CCK17; 4.5"x9.6" - CCK4, CCK14 or CCK14P.

VECTOR ELECTRONIC COMPANY, INC. 12460 Gladstone Avenue, Sylmar CA 91342 Phone (213) 365-9661 TWX 910-496-1539

Vector KLIP-BLOK/STRIP BREADBOARDING SYSTEM



(Circuit elements not included in kit)

51X KLIP-BLOK KIT - Assembled

Accepts up to 12 DIPs, has 970 tie points. Consists of big 4½"x8"x1/16" glass epoxy premarked Micro-Vectorbord® base, panel mounted on 1" high aluminum frame with eight 24-quad (T66-96) Klip-Bloks and four 48-contact Klip-Buses installed, ready for plugging in up to 12 DIPs and associated circuitry. Three 5-way binding posts are installed at one end. The Micro-Vectorbord panel provides space and facility for mounting extra large components. Kit includes stick-on MS9A and MS10A DIP contact Marker Strips, and special T49-1 Adapter Pins for plugging large components into Klip-Bloks/Strips.

51X-GP - Same as **51X**, except has heavy overall copper ground plane on panel underside.

No Soldering **Use With DIPs. Other I.C.s and Discrete Components** **No Wrapping**

Build circuits quickly with Klip-Bloks, Klip-Strips and Klip-Buses. Simply insert components into these spring clip units and make interconnections with ordinary wire. Designing, modifying and testing the circuit is easily accomplished without the need of special patch cords or risk of damaging components.

Klip-Bloks, Strips and Buses consist of spring clips with four connected tie points or 'quads.' Klip-Strips and Buses utilize the quads in strips of various lengths, from 4 to 48 tie points with insulated casings, while Klip-Bloks have these quads encased in nylon shells, either 8 (T66-32) or 24 (T66-96) quads each. All Klip-Bloks, Strips and Buses are spaced on 0.1" grids for optimum I.C. breadboarding. Klip-Bloks, Strips and Buses accept leads from 0.015" to 0.032" dia. Ordinary 22 ga. wire (0.0253" dia.) is ideal for strapping. Components may be inserted into the clips from either top or bottom. The Bloks serve as sockets for components with extra tie points for interconnections. Accompanying Klip-Buses make voltage and ground readily accessible.

Contacts used in Klip-Bloks and Strips are tin lead coated beryllium copper for thousands of reliable connections. Plastic housings on Klip-Bloks are nylon, and insulated brass shells are used on Klip-Strips and Buses.

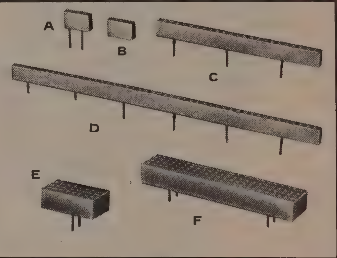
VERSATILE. Klip-Bloks, Strips and Buses fit "P" Pattern Micro-Vectorbord (0.042" dia. holes on 0.1" grid). Thus units may be "moved around" as needed with NO WASTED TIE POINTS. Plus, there is extra SPACE on the Vectorbord base to mount switches, pots, transformers--OR extra Klip units.

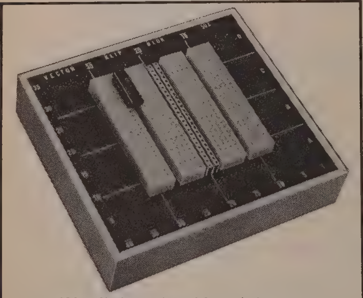
REUSABLE. Low-cost Klips and chassis panels may be used over and over again. Klips are good for thousands of insertions and may also be removed and replaced as desired.

Fig.	Part No.	Description	Pkg.Qty.
A	T45-4	Klip-Strip w/mtg. pins	16, 100
B	T45A-4	Patch-Klip - no mtg. pins	16, 100
--	T45-8	Klip-Strip - two quads	2, 10
C	T45-24	Klip-Bus	2, 10
D	T45-48	Klip-Bus	2, 10
--	P154-1	Insertion/Removal Tool for above Klip units	1
E	T66-32	Klip-Blok (8-quad)	4, 16
F	T66-96	Klip-Blok (24-quad)	2, 8
--	P92B	Removal Prod for Bloks	1
--	T49-1	Adapter Pins for leads to .050"	100
	570G-1	Solderless Breadbd. Socket (2 8-qd. Klip-Bloks mounted on nylon base)-for 14-or 16-pin DIP w/3 solderless connections. Stick-or screw-on.	1

EFFICIENT USE OF SPACE. Since components may be mounted on both top and bottom of the Vectorbord base, space is fully utilized. T49-1 Adapter Pins for leads to 0.050" dia. are available.

EXPANDABLE BREADBOARDS. 4½"x8" modules may be coupled together or mounted in larger frames for up to multiples of 144 sq. inches of breadboarding area (see next page).





(Circuit elements not included in kit)

50X KLIP-BLOK KIT - Assembled

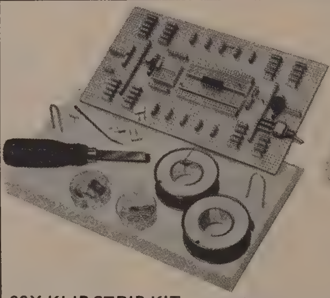
Accepts up to 6 DIPs, has 432 tie points. Micro-Vectorbord base size is 4"x4½"x1/16" with printed registration for pin position identification. Includes four 24-quad (T66-96) Klip-Bloks, two T45-24 Klip-Buses, marker strips for 14- and 16-pin DIP identification, and extruded aluminum frame 1" high.

49X KLIP-BLOK KIT - Assembled

Accepts up to 3 DIPs, has 240 tie points. Micro-Vectorbord base is 2.7"x4½"x1/16" with printed registration (2 sides), has two 24-quad (T66-96) Klip-Bloks, two T45-24 Klip-Buses, marker strips for DIP pin position, and extruded aluminum frame 1" high.

48X KLIP-BLOK KIT - Assembled

Starter kit has unperforated base 2.7"x4½"x1/16" and 240 tie points (no bottom entry). Plus two 24-quad (T66-96) Klip-Bloks, two T45-24 Klip-Buses, DIP Marker Strips MS9A and MS10A. Base mounted on rubber bump feet.



33X KLIP-STRIP KIT

(Circuit elements not included in kits)

34X KLIP-BLOK KIT

CONVENIENT BREADBOARDING KITS

33X KLIP-STRIP KIT. For the circuit using DIPs and discretes where flexible layout and component placement is desirable. Contains 70 total Klip-Strips and Buses, two 8-quad (T66-32) and two 24-quad (T66-96) Klip-Bloks, "P" Pattern Micro-Vectorbord (4½"x8"x1/16"), support foam mounting pad, bare and insulated 22 ga. wire, assorted terminals and pins, mounting devices for switches, pots, etc., insertion and removal tools. Plus complete instructions and application notes.

34X KLIP-BLOK KIT. A large assortment of Klip-Bloks (four 8-quad (T66-32) and four 24-quad (T66-96) makes this kit ideal for DIP circuitry. Also contains 16 Klip-Strips and Buses, "P" Pattern Micro-Vectorbord (4½"x8"x1/16"), foam mounting pad, terminals and pins, bare and insulated 22 ga. wire, insertion and removal tools, mounting devices for other components. Plus complete instructions and application notes.

39X MULTI-CONN KLIP-BLOK KIT. Features snap-in-out Micro-Vectorbord panel. Has two 8-quad (T66-32) and six 24-quad (T66-96) Klip-Bloks, 8 Klip-Strips and Buses, "P" Pattern Micro-Vectorbord (4½"x8"x1/16"), terminals, insertion and removal tools, switch and pot mounting loops, DIP marker strips, 75 ft. bare and insulated 22 ga. wire, 2" high aluminum chassis frame. Vectorbord simply snaps into chassis, holds firmly, yet easily removable.

VECTOR ELECTRONIC COMPANY, INC. 12460 Gladstone Avenue, Sylmar CA 91342 Phone (213) 365-9661 TWX 910-496-1539

NEW BREADBOARDING KITS

40X MULTI-CONN KIT
(Circuit elements not included in kit)

40X SOLDER KIT WITH P173 WIRING PENCIL

Unique new kit for faster circuit construction. Features the P173 Wiring Pencil and "solder-thru" insulated wire. The tool is used to route and draw 36 ga. wire around tabs or component leads from a self-contained spool. A touch of solder melts through the insulation, thus assuring fast, reliable connections. Kit contains P173 Tool; 1 "P" Pattern Padboard (4½"x8"x1/16") with etched, tinned copper oval pads and buses; 1 plain "P" Pattern Micro-Vectorbord® (4½"x8"x1/16"); over 300 assorted terminals and pins including solderable and wrappable types; six 16-pin DIP sockets; 2 round 8-pin I.C. sockets; two 570G-1 16-pin solderless breadboard sockets; 25 R41 Sockets for LEDs with .018" leads; solderless slip-on contacts for .040" pins; 100 ft. of bare and insulated 22 ga. wire; 400 ft. of 36 ga. "solder-thru" wire; wire jumpers; solder preforms; bus strips; DIP marker strips; foam mounting pad; pot and switch mounting loops; and 2" high aluminum chassis frame.

41X COMBINATION WIRE WRAPPING/SOLDER CONSTRUCTION KIT

Kit has almost everything needed to make wire wrapped circuit breadboards. Includes manual P160-2A Hand Wire Wrapping Tool for fast, reliable connections; 100 ft. of wire wrapping 22 ga. hook-up wire and 36 ga. "solder-thru" wire; "P" Pattern Micro-Vectorbord chassis (4½"x8"x1/16"); wire/cutter/stripper; over 300 terminals including 4 different .025" sq. types and some solder types; ten 16-pin wire wrap DIP sockets; R32 Socket Pins; socket contacts for .018" LEDs; bus strips; pot and switch mounting loops; terminal installing tools; alignment block; and 2" high aluminum chassis frame.

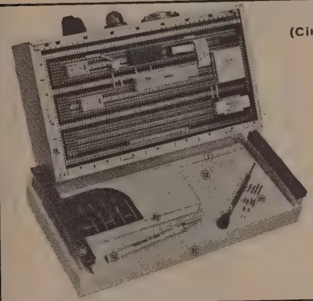
43X SERIES MULTI-CONN CHASSIS

All Multi-Conn Chassis are supplied assembled with 2" high extruded aluminum side frames for adjustable card positions and perforated aluminum bottom covers installed. Breadboards or covers snap into place in outer case grooves for insertion, and press out for easy removal. Boards mount in inner slots of chassis with the aid of supplied hardware. Rubber bump feet are included.

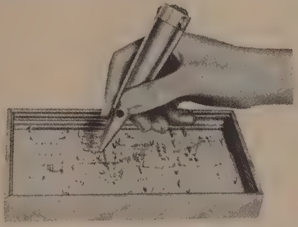
Boards listed may be used in 43X Series Chassis without purchase of additional joiner strips. Usable quantity for available area listed below:

Part No.	Description (Available Board Space in Chassis)	43X (8"x4½")	43X-2 (8"x9.4")	43X-4 9.24" x 2 (8"x9.24")
79P44-062PG-1	"P" Patt.(.042"h. on .1" ctrs.) Poly-glass, 4½"x8"x1/16", unclad	1	2	2†
79A44-062PG-1	"A" Patt.(.093"h. on .1" ctrs.) Poly-glass, 4½"x8"x1/16", unclad	1	2	2†
92A81PG	"A" Patt. Poly-glass, 9.24"x8"x1/16", unclad	--	1	2†
92P81PG	"P" Patt. Poly-glass, 9.24"x8"x1/16", unclad	--	1	2†
3677-6	"P" Patt. Epoxy glass, 4½"x8"x1/16", 1 side copperclad pads	1	2	2†
3677-7	"P" Patt. Epoxy glass Padboard, 4½"x8"x1/16", 1 side copperclad ground plane	1	2	2†
3677-8	"P" Patt. Epoxy glass Padboard, 4½"x8"x1/16", 2 sides copperclad, 1 side ground plane, other side copperclad per 3677-6	1	2	2†
3677-9	"P" Patt. Epoxy glass Padboard, 4½"x8"x1/16", 2 sides copperclad, both sides have ground plane	1	2	2†

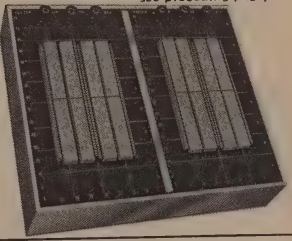
†Uses half of available space--allows choice of 8"x9.24" board for remaining space.



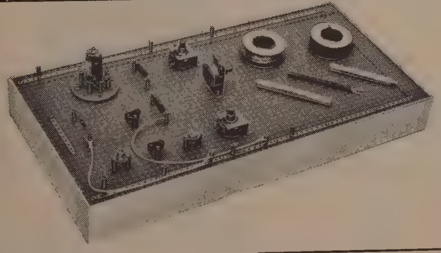
41X MULTI-CONN KIT
(Circuit elements not included in kit)



P173 WIRING PENCIL



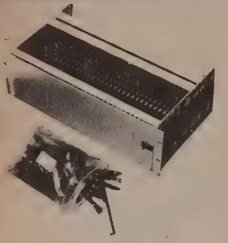
43X-2 CHASSIS KIT w/ two 51X Panels Installed
(for data on 51X, see preceding page)



25X SOLDERLESS EXPERIMENTER'S DELUXE KIT FOR TUBES AND TRANSISTORS

Large kit has big 8½"x17"x3/32" perforated Vectorbord chassis with 3/32" dia. holes on .265" centers supported by 2" high aluminum frame. Kit is ideal for experimenting with tubes, transistors, and discrete components. Most connections can be made without solder, using the patented solderless spring U-clip terminals T32 or T30N-2 included in the kit. The large, strong chassis accommodates large, heavy components. Being solderless, most parts are reusable. Includes 2 power transistor sockets; 4 universal TO-5 type 4-lead transistor sockets; three 7- and 9-pin miniature tube sockets; two 8-pin octal tube sockets; over 100 solder terminals; bus strips; hook-up wire and patch leads; miscellaneous screws, nuts, spacers, brackets; layout paper.

vero VERO ELECTRONICS INC.



VERORACK 3A

VERORACK 3A KITS ARE EASY TO ASSEMBLE AND YET PROVIDE MAXIMUM VERSATILITY. SLOTTED END PLATES ACCEPT A VARIETY OF CARD WIDTHS AND LENGHTS WITHIN EACH STANDARD END PLATE HEIGHT. THE /5 MODELS ARE SUPPLIED WITH TWO 17" LONG MOLDED NORYL GUIDE BLOCKS WITH CARD SLOTS AT o.5" CENTERS. UP TO 34 CARDS WITH A LENGTH OF EITHER 6.5" OR 8.0" CAN BE ACCOMODATED. THE /V MODELS CONTAIN GUIDE LOCATION STRIPS WHICH PERMIT CUSTOM LOCATION OF CARDS AT ANY MULTIPLE OF 0.2" CENTERS. THREE LENGTHS OF SNAP-IN GUIDES ARE AVAILABLE FOR USE WITH /V MODELS. WHEN RECOMMENDED CARD LENGHTS ARE USED, CARDS ARE SUPPORTED OVER 85% OF THEIR LENGTH. RECOMMENDED CARD LENGTHS: G1½B - 5.6", G2B - 6.5", G3B - 8.0". CONNECTOR MOUNTING RAILS & ASSOCIATED HARDWARE ARE INCLUDED IN KITS. ASSEMBLY CHARGE IS $7.50.

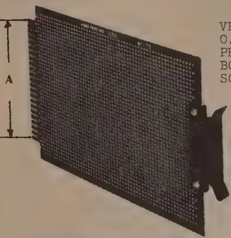
FINGER BOARDS



VERO FINGER BOARDS ARE EPOXY GLASS BOARDS PIERCED WITH EITHER AN .052" OR .040" DIAMETER HOLES ON A 0.1"x0.1" MATRIX. EACH BOARD IS BASICALLY A TERMINAL BOARD PROVIDED WITH A ROW OF GOLD FLASHED COPPER CONTACT FINGERS AT ONE END TO BE USED WITH A STANDARD P.C. EDGE CONNECTOR. THESE BOARDS HANDLE BOTH DUAL IN LINE AND DISCRETE COMPONENTS, AND ARE IDEALLY SUITED FOR USE WITH WIRE WRAP® I.C. SOCKET PINS.

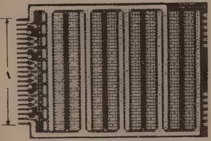
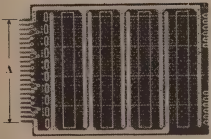
VERO D.I.P. BOARDS





VERO D.I.P. BOARDS MAY BE USED FOR MOUNTING AND INTERCONNECTING DUAL-IN-LINE PACKAGES FOR R&D OR PRODUCTION RUNS. POWER AND GROUND RAILS ARE POSITIONED ADJACENT TO ALL D.I.P. LOCATIONS AND ARE CONNECTED TO THE EDGEBOARD CONTACTS. DUPLICATE POWER AND GROUND RAILS HAVE ALSO BEEN PROVIDED ON THE REVERSE SIDE IN ORDER TO REDUCE IMPEDANCE. D.I.P. BOARDS ARE PUNCHED OVERALL WITH A MATRIX OF .040 HOLES ON 0.1" CENTERS TO ACCEPT DUAL-IN-LINE PACKAGES OR I.C. SOCKETS AND THE HOLES OUTSIDE THE COPPER TRACKS MAY BE USED FOR TERMINAL PIN INTERCONNECTION. PACKAGING DENSITY IS SHOWN AS NUMBER OF 14 PIN DEVICES THAT FIT ON EACH BOARD.

MOLDED RF INDUCTORS TO MILITARY SPECIFICATION

Airco Inductors are for Radio Frequency and Pulse Circuit applications. The standard inductors from 0.1 µh through 10,000 µh are designed to meet the requirements of MIL-C-15305. Our High Reliability has been proven by over 253,470,000 unit test hours. You are always assured of uniformity of product, a result of stringent Quality and Inspection procedures at every production stage.

SHIELDED MOLDED RF INDUCTORS

Shielded Inductors incorporate a low reluctance magnetic shield that practically eliminates the stray magnetic field of the usual solenoid inductor or coil. Except for the shield, the materials, construction, product uniformity, etc., are the same as our other molded coils.

Airco Type	Inductance Range µh	Number of Standard Values	"Q" Range Min.	SRF Range Min. — MHz	Dimensions (Inches) Body (Nom.) Dia.	Length	Lead Wire	Applicable Military Specifications
15S	.1 — 68,000	71	23 — 60	.13 — 250	.162	.410	.025	MS 75087 MS 75088 MS 75089 MS 90537

SHIELDED CONFORMAL COATED RF INDUCTORS

A shielded inductor with a reasonable price, used in industrial and consumer products.

Airco Type	Inductance Range µh	Number of Standard Values	"Q" Range Min.	SRF Range Min. — MHz	Dimensions (Inches) Body (Max.) Dia.	Length	Lead Wire
14S	.1-56,000	70	25—71	1.56—500	.125 to .169*	.450	.025

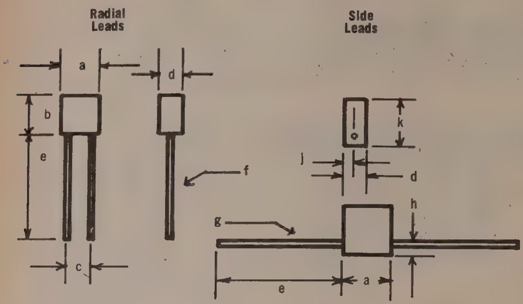
*Varies with inductance.

CONFORMAL COATED RF INDUCTORS

These cords feature a varnish-epoxy coating, quality performance and reasonable prices for non-military products.

Airco Type	Inductance Range µh	Number of Standard Values	"Q" Range Min.	SRF Range Min. — MHz	Dimensions (Inches) Body (Max.) Dia.	Length	Lead Wire
08N	.1 — 1,000 ± 10%	49	30 — 45	3.4 — 680	.085	.200	.020
17N	.1 — 3,300 ± 10%	55	30 — 50	1.3 — 600	.175	.400	.025

In addition to these catalog items, we can supply various specialty coils for your requirements. Our capabilities include Pi winding, hash or high current, balun, ferrite bead and network types of inductors. Contact Airco Electronics, P.O. Box 1692, Grand plaza, Nogales, Arizona 85621 Phone (602) 287-5851 TWX 910-973-9794.



Encapsulated Subminiature and Miniature Toroidal Inductors

Features

- Applications: printed circuits and modules
- Environmental: designed to meet MIL-C-15305, Grade 1, Class B (−55°C to +125°C)
- Moisture and shock resistant, immersion proof
- Powdered iron toroidal core, low external magnetic field
- Identification: part number and inductance value printed in contrasting color

General Specifications (All Series)

Maximum operating temperature: 125°C
Rated temperature rise (at 90°C): 35°C
Dielectric withstanding voltage: 700 v rms
Terminal pull: 5 pounds
Altitude rating: 70,000 feet
Overload current: 1.4 times the rated current
Add Suffix -S to P/N for side leads configuration

MOLDED SHIELDED MINIATURE RF CHOKES

An extremely useful series of chokes where extraneous coupling presents problems in dense packaging. Electromagnetic shielding limits coupling to less than 3% when two units are placed side by side.

MICRO MITE MOLDED RF CHOKES

Nicknamed the "Micro-Mite", these rugged coils exhibit high Q and very low distributed capacity, all concentrated into an amazingly small package. Size reduction ranges up to 80% of equivalent standard molded chokes. The construction of these coils permits miniaturization without the use of ferrite materials, thus maintaining temperature stability.

MICRO-MINIATURE MOLDED RF CHOKES

We are pleased to offer the following series of molded RF chokes. They represent what we believe to be the smallest package for the current rating specified. Color Coding is per MIL-C-15305.

DUAL LINE FILTER CHOKES

Miller Dual Duo-Lateral Line Filter Chokes are wound with two coils on one form, giving the advantage of small physical size in cases where space requirements are stringent and two single coils would occupy too much area. Identical in specifications, except for dimensions, to our single type Duo-Lateral chokes. They are wound on white ceramic forms 2″ in diameter by 4½″ long.

Cat. No.	Amps.	Ohms	Uh.	Dimensions

SUB-MINIATURE RF CHOKES

An extremely versatile series of iron core RF chokes designed to meet the industries' demand for high reliability, ultra-miniature components. The coils are ideally suited to network and filter design, delay lines, and computer applications. The coils are impregnated with a moisture resistant lacquer and on special order they can be fungus-proofed per JAN-T-152 using varnish per MIL-V-173A. They can also be encapsulated in epoxy resin to conform to Grade 1, Class B of MIL-C-15305.

RESINITE ADJUSTABLE RF COILS

Resinite is a phenolic impregnated tubing which combines the mechanical and dielectric advantages of phenolics with the high dielectric strength, moisture resistance, and non-corrosive properties of cellulose acetate. Resinite can be certified to MIL-P-79B Type PBG. This series features an extremely wide choice of inductance ranges and utilizes only the highest quality commercial materials throughout. They find application where the severe moisture resistant characteristics of the encapsulated units and the mechanical properties of the ceramics are not required.

SHIELDED SUBMINIATURE ADJUSTABLE R F COILS

These compact adjustable coils offer a minimum two-to-one inductance range with relatively small changes in Q. The tuning adjustment is accessible from either the top or bottom of the coil assembly. Magnetic shielding is achieved through the use of cup cores while the metal shield offers effective electrostatic shielding. Printed circuit terminals on base and shield.

imensions: 1/2" sq. x 5/8" high.

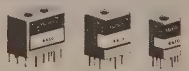
I F COMPONENTS SUB MINIATURE



The transformers in this series represents the state of the art, as it relates to a commercial product. In both the 455 kc. and 10.7 Mc. groups there are a complete set of I.F. transformers as well as Ratio Detector and Discriminator transformers. Part No. 8814 incorporates a single section mechanical filter that sharpens the I.F. passband appreciably 4 kc. @ 6 db and 12 kc. @ 20 db. The physical dimensions of this unit are .415 wide .460 deep and .600 high.

Dimensions: **8849, 8850, 8851, 8805, 8806 & 8807 — 25/32" x 7/16" x 1/2" high.**
8852, 8853 & 8854 — 13/32" sq. x 5/8" high.
8810, 8811, 8812 & 8813 — 9/32" sq. x 15/32" high.
8814 — 13/32 x 15/32" x 9/16".

Cat. No.	Specs	Description

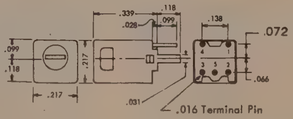
TRANSISTOR COILS . . . SMALLEST YET LESS THAN 1/4"



A complete set of 455 KHz IF transformers and matching Osc. coil, and a complete set of 10.7 MHz IF transformers and matching Discriminator coils . . . all so small as to be almost unbelievable.

Each unit measures only .217 x .217 x .339 and is for printed circuitry.

Cat. No.	Freq.	Impedance	Use
8855	10.7 MHz	20 K— 75 Ω	1st IF
8856	10.7 MHz	15 K—300 Ω	2nd & 3rd IF

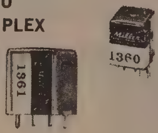
8815	455 KHz	50 K— 2 K	1st IF
8816	455 KHz	50 K— 2 K	2nd IF
8817	455 KHz	5 K— 5 K	3rd IF
8818	540-1600 KHz		BC Osc.

(Tuning capacitor 67-78 pF maximum)

SMALLEST YET STEREO MULTIPLEX



These recently developed Multiplex units when used with a Motorola IC #MC1304 FM Stereo Demodulator form a complete FM Stereo Decoder System. They provide excellent opportunity for OEM and Experimenter projects. Ask for "The Coil Forum" Application Note.

Each Multiplex System requires:

1 No. 1363 — PCB (PC Board)
2 No. 1359 and 1 No. 1360 or
2 No. 1361 and 1 No. 1362

Cat. No.	Description	Size
1359	19 KHz	.591 x .402 x .402
1360	38 KHz	.591 x .402 x .402
1361	19 KHz	.748 x .591 x .591
1362	38 KHz	.748 x .591 x .591

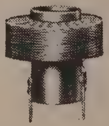
AIR CORE PRINTED CIRCUIT R.F. CHOKES



The following R.F. Chokes have been designed to offer a wide range of inductance values for use in printed circuit applications. Our standard stock of these coils is impregnated with a high grade coil varnish to prevent moisture absorption. On special orders we can supply these items treated with fungus resistant material, or encapsulated in epoxy resin to meet MIL—C—15305. **Coil length: ⅞″ on all items.**

FREQUENCY SELECTIVE R.F. CHOKES

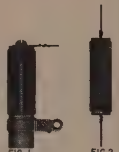

FIG. I
FIG. 2

Designed for maximum efficiency and highest impedance at specific operating frequencies this group of R.F. chokes eliminates the designer's task of attempting to choose the best coil for a particular application from miscellaneous and often insufficient design data. Designed to cover the major Amateur and Industrial communication frequencies.

Part No.	Inductance ±10%	Freq. Mc
RFC-3.5	266. uh	1.8-5
RFC-7	208. uh	3-13
RFC-14	84. uh	7-20

ECONOMY ADJUSTABLE R.F. CHOKES

Dimensions: ⅜" x 1⅜" long.

Through the use of a recently developed Nylon molding process we are able to offer an inexpensive line of adjustable chokes. These items feature a wide inductance range which has been achieved through the use of a threaded ferrite core. They can be adjusted from either the top or bottom. This lends a degree of flexibility to your design. Mounting is achieved by means of a metal clip in a 5⁄16" round hole or a special keyed hole. Instructions supplied with each coil.

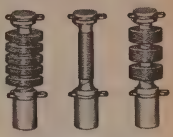
CERAMIC FORM R.F. CHOKES

A series of high quality fixed coils wound on a silicone impregnated steatite form. The coils are the standoff type and are mounted by a single 6-32 screw. They find primary application in low power transmitters and associated equipment where relatively high current capacity and low distributed capacitance are important.



Form Dimensions:
11⁄16" Dia. x 1 15⁄16" long

Cat. Number	Inductance ±5% @ 1000 Cycles	Resistance Max.	Rated Current

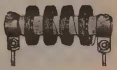
CERAMIC CORE R.F. CHOKES



Miller ceramic core radio frequency chokes are the result of careful research and design, and present advantages found in no other comparable chokes. These chokes have extremely low distributed capacity.

Dimensions: (form) ¼" diameter by 1½" long. All chokes are impregnated with a moisture- and fungus-resistant varnish.

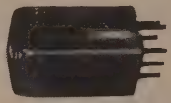
FERRITE POT CORE INDUCTORS & TRANSFORMERS

Caddell-Burns has complete facilities for winding and assembling all types of pot core assemblies, both fixed and variable. Write or telephone with your specifications.

TRANSFORMER DESIGN KIT

The C-B 6370 Multitran Assembly provides the engineer with a flexible approach to R.F. and I.F. transformer design. The 6370 assembly is available with a choice of shielding cups (powdered iron or ferrite) and tuning cores in a wide range of sizes and materials. Coils may be wound directly on the coil form; or type 6373 coils listed below, may be used. These coils are wound on slip-tubes and may be moved on the coil form permitting precise adjustment of coupling and bandwidth. Or the coils may be used singly for the design of tuned circuits, filters and traps. The parameters tabulated below are typical values for single coils mounted in the type 6370 assembly.

When an optimum design has been established, we will manufacture transformers, to specification, in any quantity.



TYPE 6370

.545 Sq. x 1.00 H.

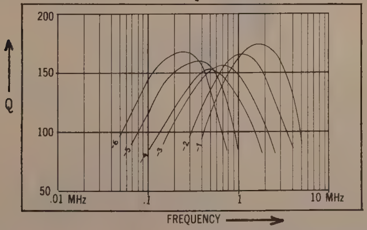
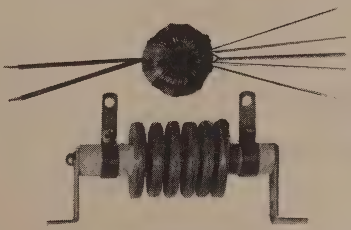
TYPICAL Q CURVES



CUSTOM WINDING



Caddell-Burns offers 29 years of experience in the design and manufacture of all types of coils, with complete facilities for custom winding to customer specification. Send us your requirements for a prompt quote.

MODIFIED STOCK COILS

Any of the coils shown on these pages can be wound to intermediate inductance values, or modified to meet customer requirements, often at no additional cost.

DEPENDABLE DALE® INDUCTORS

TYPE IR-2 and IR-4 EPOXY CONFORMAL COATED INDUCTORS

- ■ Models for precision and commercial applications
- ■ Combines durability and low cost ■ Flame retardant coating

Standard Tolerance: ±1%, ±3%, ±5%, ±10%. **Inductance Range:** .10 µh to 1000 µh. 49 standard values. Q, self-resonant frequency, DC resistance, rated current and core material as specified for IM models below.

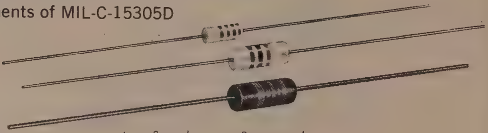
DIMENSIONS

MODEL NO.	A	B	C	D
IR-2	.350″	.135″	2.955″	24 AWG
IR-4	.450″	.200″	2.985″	22 AWG

TYPE IM MOLDED INDUCTORS TYPE IMS MOLDED SHIELDED INDUCTORS

- ■ Meets electrical, material, mechanical and environmental requirements of MIL-C-15305D
- ■ Features precision performance, reliability
- ■ Wide range of inductance values in a small package
- ■ Flame retardant molded coating

Standard values IM-2 (49) **and IM-4** (47). Tolerance, Q, test frequency L & Q, self-resonant frequency, DC resistance, DC current rating and core material per standards shown in the Inductance Range and Mil Standard Chart below.



INDUCTANCE RANGE

FILTER INDUCTORS (Toroidal) Type TE and TD

Choice of encapsulated (TE) or dipped (TD) styles. TE models are designed to meet MIL-T-27C, Type TF5SX20ZZ. TD models combine low cost with high performance in commercial applications. High Q and wide selection of Q vs frequency ranges, plus a large number of inductance values.

SPECIFICATIONS

DALE TYPE TE or TD	INDUCTANCE	STANDARD TOLERANCE
2Q0	50.0 µh to 10.0 mh	±1% > 2 mh ±2% 0.05 mh to 2.0 mh
2Q3	470 µh to 120 mh	
2Q4	1.00 mh to 250 mh	
3Q0	50.0 µh to 15 mh	±1% >2 mh ±2% 154 µh to 2 mh ±5% < 150 µh
3Q3	500 µh to 1 h	
3Q4	1 mh to 4 h	
4Q0	150 µh to 20 mh	±1% >2 mh ±2% <2 mh
4Q3	1 mh to 2 h	
4Q4	2 mh to 7.5 h	
5Q0	1 mh to 100 mh	±1% >2 mh ±2% < 2 mh
5Q3	5 mh to 2 h	
5Q4	10 mh to 20 h	

Within the inductance ranges shown above, Dale offers a wide choice of standard values each of which is within one percent of the preceding and succeeding values.

DIMENSIONS

TE-2 = .437″ O.D. x .270″ H., .300″ terminal spacing
TD-2 = .437″ O.D. x .25″ H., 2″ flexible leads

TE-3 = .685″ O.D. x .385″ H., .500″ terminal spacing
TD-3 = .685″ O.D. x .32″ H., 3″ flexible leads

TE-4 = 1.062″ O.D. x .500″ H., .900″ terminal spacing
TD-4 = 1.062″ O.D. x .437″ H., 4″ flexible leads

TE-5 = 1.32″ O.D. x .725″ H., 1″ terminal spacing
TD-5 = 1.32″ O.D. x .688″ H., 6″ flexible leads

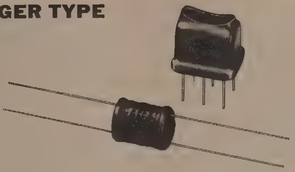
DEPENDABLE DALE® TRANSFORMERS

TYPE PT10 and PT20 PULSE TRANSFORMERS—TRIGGER TYPE



- Designed for low cost trigger source isolation in half and full wave SCR power control circuits including motor speed controls, heater controls and incandescent lighting controls
- Choice of printed circuit or bobbin-type configurations
- Designed to transfer high amplitude or long duration pulses without saturation.

TRANSFORMER SPECIFICATIONS

Electrical

Primary Inductance Values: 200μh to 5000μh

Turns Ratio: 1:1, 1:1:1, 2:1, 2:1:1 and 5:1

Temperature Range: –10°C to +70°C

Dielectric Test @ 60 Hz: 1600 Volts RMS

AC Line Voltage @ 60 Hz: 240 Volts RMS Max.

Material

Bobbin: Nylon

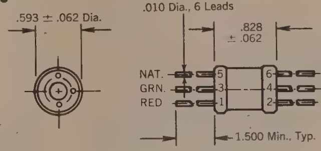
Leads: Tinned, solderable. PT10 = Polyurethane insulated magnet wire for clip or bracket mounting. PT20 = Tinned copper #20 AWG for printed circuit mounting.

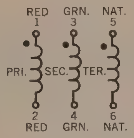
Covering: Thermoplastic

Header: Thermoset Plastic

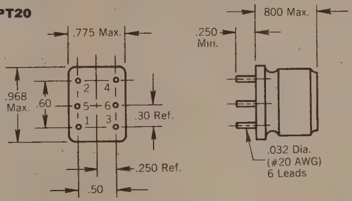
Also available in standard models with 4 pins or leads for applications where only primary and secondary windings are required.

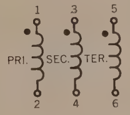
PT10





PT20





DC-DC CONVERTER TRANSFORMERS

TYPE ITC

- Designed especially for low power applications
- Uses include power supplies for battery-operated portable instruments, operational amplifiers, and gas discharge displays
- P.C. mounting
- Available in open or encapsulated styles
- Easily custom-designed for specific applications.

ELECTRICAL DESIGN RANGE

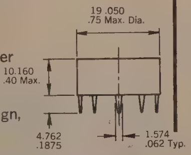
Input Voltages: 1.5-30 volts DC

Output Voltages: Up to 200 volts DC from rectifier

Power: Up to 3 watts

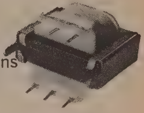
Operating Frequency: 10-20KHz typical design

Power Efficiency: 50 to 80%, depending on design, power and voltage levels.



POWER TRANSFORMER

TYPE PL



- Control equipment and instrument applications
- Voltage step up or step down
- Provides isolation from power line
- P. C. Plug-in mounting design
- Laminated construction
- Designed to meet U.L. requirements
- 8-pin dual primary model also available

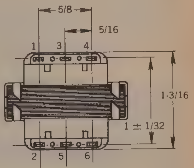
ELECTRICAL

Primary Voltage: 115 volts RMS 60 Hz

Available Output Voltages: 4 volts to 230 volts at 1.2 watts

Dielectric Strength: 1250 volts 60 Hz primary-secondary core

Temperature Rise: 25°C maximum at rated load



CUSTOM BOBBIN COILS

- Statistical control on high volume production items
- Low initial tooling cost

CUSTOM TOROIDS

- Potted with case sizes to fit your specific designs
- Open wound using Dale-formulated coatings for extra protection
- Hermetically-sealed cans
- Pulse transformers, inverters, RF inductors and transformers with or without terminal boards. Unusual shapes and sizes a specialty.

MOLDED RF *coils and inductive components*

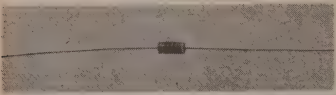
DELEVAN PARTS WILL MEET ALL REQUIREMENTS OF MIL-C-15305

From Delevan's inception its product philosophy called for an extremely high degree of precision manufacturing to meet exacting performance levels required by quality-minded manufacturers of electronic systems. Delevan's engineering paces new product development in the coil industry, and its products are continually monitored by environmental testing to maintain consistently high standards.

With today's problems of miniaturization; hybrid circuits; and reliability, both functional and process-wise, Delevan becomes even more prominent in the inductor and component industry. Our philosophies have not changed. Check with us for any inductive requirement — from chip inductors for hybrids to miniature axial leaded, shielded or non-shielded units for both Hi-Reliability or Commercial application. Our expanded environmental and x-ray capabilities guarantee performance.

SERIES 0819

MILITARY SPECIFICATIONS:
MIL-C-15305 (LT4K & LT10K)



PHYSICAL PARAMETERS —
Length: .200±.010
Diameter: .078±.008
Lead Size: AWG #26 TCW.
Lead Length: 1.5±.12

CURRENT RATING at 90°C AMB. —

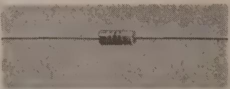
SERIES 1025

MILITARY SPECIFICATIONS:
MS-75083 (LT4K)
MS-75084 (LT10K)
MS-75085 (LT10K)



PHYSICAL PARAMETERS —
Length: .250±.010
Diameter: .095±.010
Lead Size: AWG #24 TCW.
Lead Length: 1.5±.12

CURRENT RATING at 90°C AMB. —
LT4K: 35°C Rise.
LT10K: 15°C Rise.

OPERATING TEMPERATURE —
LT4K: −55°C to +125°C.
LT10K: −55°C to +105°C.

POWER DISSIPATION at 90°C —
LT4K: .21 Watts.
LT10K: .09 Watts.

WEIGHT IN GRAMS: .03 Max.

coils and inductive components

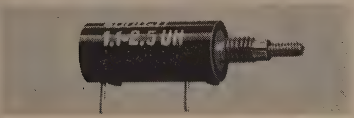
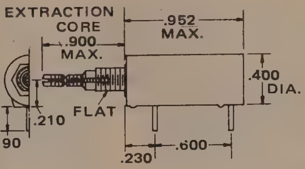
SERIES 4000 & 4100

MILITARY SPECIFICATIONS:
MS-90543 (LT12V)
MS-90546 (LT12V)





CURRENT RATING at 90°C AMB.: 15°C Rise.
OPERATING TEMPERATURE: −55°C to +105°C.
WEIGHT IN GRAMS: 7.0 Max.
CRIMP-ON TERMINAL —
Crimp-on terminals are available as an accessory.
Material: Tinned brass.

PHYSICAL PARAMETERS (Max.): .160″ sq. x .075″ High.

ORDERING INFORMATION:
1. Chart shows Tork-Tite design P/N. For Taper-Lock design replace the 4000 prefix with a 4100 prefix.
2. For optional crimp-on terminals — suffix total P/N with "TA."

NOTE: Units can be used in either printed circuit or chassis mounted applications.

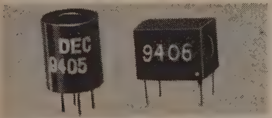
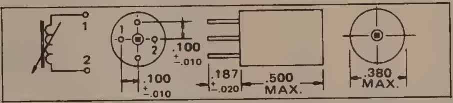
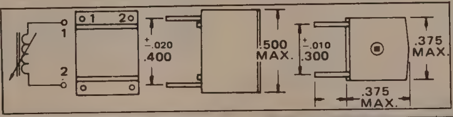
NOTE: All even dash numbers (-00, -02, -04 . . .) utilize Powdered Iron Cores. Odd dash numbers (-01, -03, -05 . . .) utilize Ferrite Cores.

SERIES 9405 & 9406

MILITARY SPECIFICATIONS:
MIL-C-15305C (LT6V)







LEADS: AWG #24 Tinned Copperweld.
TUNING TORQUE: 0.1 to 3.5 oz. in.
PIN #1: Identified by white dot.
CURRENT RATING at 90°C AMB.: 35°C Rise.
PHYSICAL PARAMETERS (Max.): .375″ sq. x .500″.
OPERATING TEMPERATURE: −55°C to +125°C.
POWER DISSIPATION at 90°C: .3 Watts.
WEIGHT IN GRAMS: 4.0 Max.
UNITS: Electro-magnetically shielded and tunable from either end.

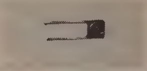
SERIES 100



MILITARY SPECIFICATIONS:
MS-21367 (LT10K)

MECHANICAL CONFIGURATION:
1. Units are epoxy encapsulated.
2. Leads are tin-plated Beryllium Copper. (Gold plated leads available on special order.)

PHYSICAL PARAMETERS (Max.): .110″ sq. x .065″ High.
CURRENT RATING at 90°C: 15°C Rise.
OPERATING TEMPERATURE: −55°C to +105°C.
POWER DISSIPATION at 90°C: 20.5 mW.
WEIGHT IN GRAMS: .03 Max.

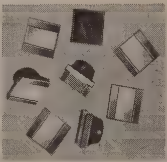
CHIP INDUCTORS
SERIES 103

MILITARY SPECIFICATIONS:
MIL-C-15305 (LT4K & LT10K)



OPERATING TEMPERATURE —
LT4K: −55°C to +125°C.
LT10K: −55°C to +105°C.

CURRENT RATING at 90°C AMB —
Ferrite Core: 15°C Rise (LT10K)
Phenolic Core: 35°C Rise (LT4K).

WEIGHT MAX.: .03 Grams Max.

POWER DISSIPATION at 90°C: 75 mW Max.

THERMAL CONDUCTANCE: 5 mW/°C Min.

INSULATION RESISTANCE:
1000 Megohms Min. at 100 VDC.

PHYSICAL PARAMETERS (Max.): .110″ sq. x .075″ High.
Solder Rails both bottom and sides.

DIELECTRIC WITHSTANDING VOLTAGE:
Sea Level (14.7 psia) 140 Vrms.
Altitude 70K Ft. (.643 psia) 50 Vrms.

LOAD LIFE at 90°C: 2000 Hrs. at Rated Current.

PERCENT COUPLING: 3% Max.

MECHANICAL CONFIGURATION:
1. Units have epoxy overcoat.
2. Contact areas for reflow soldering are gold plated per MIL-G-45204 Type 1 - Grade A.

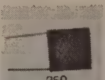
SERIES 150 & 250

MILITARY SPECIFICATIONS:
SERIES 150 **MS-21368** (LT10K)
SERIES 250 **MS-21369** (LT10K)

150



250

MECHANICAL CONFIGURATION:
1. Units are epoxy encapsulated.
2. Leads are tin-plated Beryllium Copper. (Gold plated leads available on special order.)

CURRENT RATING at 90°C: 15°C Rise.

OPERATING TEMPERATURE: −55°C to +105°C.

PHYSICAL PARAMETERS (Max.):
Series 150: .160″ sq. x .065″ high.
Series 250: .250″ sq. x .065″ High.

POWER DISSIPATION at 90°C —
Series 150: 22.5 mW.
Series 250: 37 mW.

WEIGHT IN GRAMS —
Series 150: .05 Max.
Series 250: .18 Max.

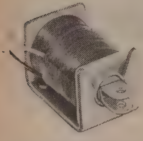
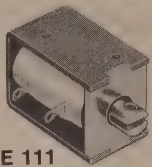
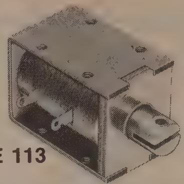
SOLENOIDS



E 109



E 111



E 113

■ Voltages from 6 V to 230 V AC or DC ■ Custom lead lengths and terminal variations ■ Special plunger lengths and styles ■ Impregnated or encapsulated models

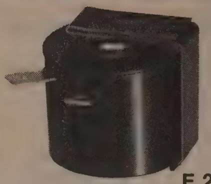
Specifications

	Power Requirement Intermittent/Continuous (25%)	Pull (Continuous Only)
E 109	18 W/4.5 W	8 oz. @ .05" gap
E 111	20 W/5.2 W	20 oz. @ .05" gap
E 113	30 W/8 W	35 oz. @ .05" gap

■ All metal parts are zinc plated. ■ Staked yoke standard. You may specify conical or flat plungers on production orders. ■ Life expectancy at rated load: 5 x 10^6.

BUZZERS

E 29L



E 29T

■ Produce loud, distinctive sound ■ Mount quickly, easily with single screw ■ Manufactured with exclusive Uni-Weld® process

Specifications

Order by number code: E 29 or E 30	Terminals		Leads (5" Length Standard)	
	E 29	E 30	E 29	E 30
6 Volt, 60 Hz.	6E29T	6E30T	6E29L	6E30L
12 Volt, 60 Hz.	12E29T	12E30T	12E29L	12E30L
24 Volt, 60 Hz.	24E29T	24E30T	24E29L	24E30L
120 Volt, 60 Hz.	120E29T	120E30T	120E29L	120E30L

Ask about quantity prices.
Special voltages and terminals available.

VIBRATORS

E 305

E 301

■ Improve distribution and flow of solid or liquid materials ■ Long life ■ Noiseless ■ Adhesive mounting pad ■ Easy to install

Specifications

Model: Miniature Vibrator, E 305
Voltage: 115 V AC, continuous duty (other voltages to specification)
Input: 5 watts
Vibrating Frequency: 120 cps.
Force: 2.5 g's
Size: 1.50" (3.81 cm) x 1.00" (2.54 cm) x 1.25" (3.18 cm)
Weight: 1.8 oz. (50 gms.)

CLICKERS

E 8600

■ Creates distinctive sound in electronic keyboards
■ Reduces chance of error on "silent", "soft-touch" keyboards

Specifications

Duty Cycle: Approx. 15% max.
Coil: 20 ohm
Coil Insulation: 1500 V AC, 60 Hz. to frame. Other voltages to specification. Special windings available to suit other operating conditions.
Recommended Conditions: 20 volt pulse for 5 millisecond duration. (Signal may be varied by changing the duration of applied pulse.)
Termination: 8" leads standard. Terminals available.

Coil products to your specifications

Coils for any application: solenoids, power converters, relays, printers, reed switches, clocks, motors, clutches, tachometers, controls, transformers, vibrators, buzzers.

Check our capabilities: random wound bobbin coils, thread interweave coils, coil assemblies, transfer molding, encapsulation, impregnation, fluidized bedcoating, ultrasonic welding.

the buck stops here

Single source responsibility with all in-plant facilities and services from concept to delivery. Complete design and engineering ability, precision tool making, production and quality control to meet or exceed customary tolerances.

Harbison does it all ....

Specializing in injection molding of electrical and electronic components including coil forms, bobbins and connector housings. Materials such as glass filled nylon, Zytel 101, Valox, Delrin, Noryl, and phenolics.

modular family molding !!!

The economies of multiple cavity molding with the precision and quality of custom molding . . . allow a mix or match with significant savings. All this and industry-beating delivery time!

Harbison customers are sold but **never** forgotten

APPROVED MIL-C-39010

FAILURE RATE "P" .1%/1000 HRS.

Nytronics' history of technical leadership in inductors has a new chapter. The first company to extend the standard line concept to variable inductors has remained ahead in every subsequent step of refinement and miniaturization.

Today, there's a new place for a familiar group of inductors under highest reliability military specifications—MIL-C-39010 (latest revision). The unique "T" lead construction eliminates fine wire consideration that has previously concerned design engineers on critical circuitry.

With sizes ranging from the world's smallest shielded inductor to the most complex variable inductor . . . shielded, unshielded, chip and variable, in hundreds of off-the-shelf values. . . it makes good sense to check first with Nytronics or your local distributor.

Now tested and approved to highest reliability military specifications.

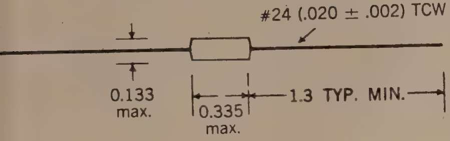
Inductors

WEE-WEE-DUCTOR SERIES

The smallest shielded inductor for high density circuits 0.10 to 1,000 uh 0.133" diameter x 0.335" length. We have 49 stock values.

The **WEE-WEE-DUCTOR** offers the Design Engineer a subminiature shielded inductor to solve special problems in density circuit application. This shielded inductor has great inductance-to-size ratio and is designed to meet the stringent requirements of MIL-C-15305 (latest revision).

0.10 to 10,000uH
0.133" diameter x 0.335" length
49 stock values



ELECTRICAL CHARACTERISTICS

Inductance Tolerance:	±10% (Q-Meter).
Dielectric Strength:	700 volts RMS at sea level.
Self-Resonant Frequency:	Minimum f_o to be not less than 80% of published data, and measured with full length leads on Q-Meter.
Rating:	I maximum based on ⅓ watt dissipation.

DENSITY CHARACTERISTICS

Volume:	0.0041 cubic inches.
Weight:	0.50 grams maximum.
Shielding:	Less than 3% coupling with two units mounted side by side at 1000 cycles.

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Operating Temperature:	−55°C to +125°C.
Terminal Strength:	Meets five pound pull test; five 360° rotations in alternate directions per MIL-C-15305 (latest revision).
Moisture, Vibration and Shock Resistance:	Meets requirements of MIL-C-15305 (latest revision). High Frequency: 10 cps to 2000 cps @ 15G ±10% maximum for 12 logarithmic swings each of 20 minute duration repeated for each of three mutually perpendicular planes. Shock: 50G, 11 MS.
Marking:	Color coded per MIL-C-15305 (latest revision).

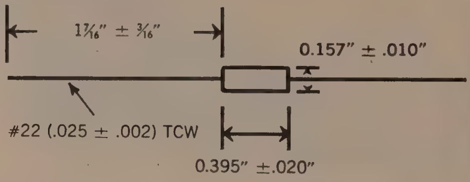
Inductors

MS-INDUCTOR SERIES
75087, 75088, 75089
MOLDED SHIELDED INDUCTOR

Ultra-Reliable Molded Shielded Miniature Inductor.
Inductance Range: 0.1uH to 100,000uH.

The **MS-INDUCTOR SERIES** are R.F. Inductors specifically designed to meet the demanding requirements of MIL-C-15305 (latest revision). The MS-INDUCTOR Series epoxy molded envelope and shielding offers the design engineer reliability, electrical performance, and minimum coupling in high density packaging.



ELECTRICAL CHARACTERISTICS

Inductance Tolerance: ±10% over the entire inductance range.
Dielectric Strength: 700 volts RMS at sea level.
Self-Resonant Frequency: Measured per MIL-C-15305 (latest revision).
Q: Measured on a Q-Meter.
Maximum Current: Based on temperature rise not to exceed 15°C at 90°C ambient.

DENSITY CHARACTERISTICS

Volume: 0.0076 cubic inches **Weight:** 0.75 grams maximum
Shielding: At 1000 cycles two units assembled side by side exhibit less than 3% coupling.

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Operating Temperature: −55°C to +105°C.

Terminal Strength: Meets five pound pull test; five 360° rotations in alternate directions per MIL-C-15305 (latest revision).

Moisture, Vibration, and Shock Resistance: Meets requirements of MIL-C-15305 (latest revision), Grade 1, Class B. High frequency 10 cps to 2000 cps @ 15G ±10% maximum for 12 lograithmic swings each of 20 minute duration repeated for each of three mutually perpendicular planes. Shock: 50G, 11 MS.

Marking: Color coded per MIL-C-15305 (latest revision).

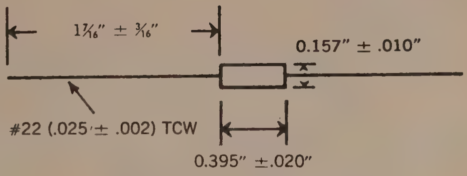
Inductors

MS-INDUCTOR SERIES
90537
MOLDED SHIELDED INDUCTOR
(Manufactured per MS-90537)

Ultra-Reliable Molded Shielded Miniature Inductor.
Inductance Range: 0.1uH to 100,000uH.
Unique "T" design eliminates Fine Wire considerations.

The **MS-INDUCTOR SERIES** are R.F. Inductors specifically designed to meet the demanding requirements of MIL-C-15305 (latest revision). The MS-INDUCTOR Series epoxy molded envelope and shielding offers the design engineer reliability, electrical performance, and minimum coupling in high density packaging.



ELECTRICAL CHARACTERISTICS

Inductance Tolerance: ±10% over the entire inductance range.
Dielectric Strength: 700 volts RMS at sea level.
Self-Resonant Frequency: Measured per MIL-C-15305 (latest revision).
Q: Measured on Q-Meter.

Maximum Current: Based on temperature rise not to exceed 35°C at 90°C ambient.

DENSITY CHARACTERISTICS

Volume: 0.0076 cubic inches **Weight:** 0.75 grams maximum
Shielding: At 1000 cycles two units assembled side by side exhibit less than 3% coupling.

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Operating Temperature: —55°C to +125°C.

Terminal Strength: Meets five pound pull test; five 360° rotations in alternate directions per MIL-C-15305 (latest revision).

Moisture, Vibration, and Shock Resistance: Meets requirements of MIL-C-15305D, Grade 1, Class B. High frequency 10 cps to 2000 cps @ 15G ±10% maximum for 12 logarithmic swings each of 20 minute duration repeated for each of three mutually perpendicular planes. Shock: 50G, 11 MS.

Marking: Color coded per MIL-C-15305 (latest revision).

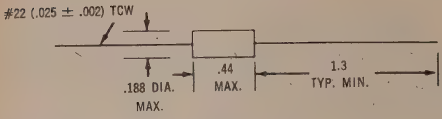
SPECIFICATIONS
FIXED INDUCTORS
RFC-S SERIES

Proven reliability molded inductors specifically designed to meet MIL-C-15305 (latest revision). Inductance 0.1 to 1000uH.

ACTUAL SIZE



ELECTRICAL CHARACTERISTICS

Inductance Tolerance:	0.1 to 22uH ±10% on Q-Meter 27uH to 1000 ±5% 1,000 cps bridge 120uH to 1000 uH ± 5% on Q-Meter
Dielectric Strength:	700 volts RMS at sea level.
Self-Resonant Frequency:	Minimum f_0 to be not less than 80% of published data and measured with full length leads on Grid-Dip Meter.
Q:	Measured on Q-Meter.
Rating:	⅓ watt dissipation for series S

DENSITY CHARACTERISTICS

Volume:	S Type — 0.012 cu. in.
Weight:	S Type — 0.90 grams

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Operating Temperature:	—55°C to +125°C.
Terminal Strength:	Meets five pound pull test per MIL-C-15305. (latest revision).
Moisture, Vibration, and Shock Resistance:	Meets requirements of MIL-C-15305 Grade 1, Class B. High frequency 10 cps to 2000 cps @ 15G ± 10% maximum for 12 logarithmic swings, each of 20 minute duration repeated for each of three mutually perpendicular planes. (body mounted)

ELECTRICAL CHARACTERISTICS

Inductance Tolerance:	1.0 to 22uH ± 10% on Q-Meter 27uH to 2200 ± 5% 1,000 cps bridge
Dielectric Strength:	700 volts RMS at sea level.
Self-Resonant Frequency:	Minimum f_0 to be not less than 80% of published data and measured with full length leads on Grid-Dip Meter.
Q:	Measured on Q-Meter.
Rating:	⅓ watt dissipation for series M

DENSITY CHARACTERISTICS

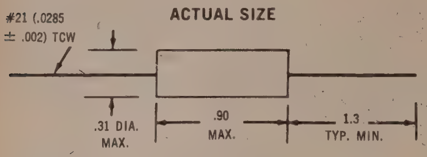
Volume:	M Type — 0.029 cu. in.
Weight:	M Type — 2.00 grams

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Operating Temperature:	−55°C to +125°C.
Terminal Strength:	Meets five pound pull test per MIL-C-15305.
Moisture, Vibration, and Shock Resistance:	Meets requirements of MIL-C-15305 (latest revision). High frequency 10 cps to 2000 cps @ 15G ± 10% maximum for 12 logarithmic swings, each of 20 minute duration repeated for each of three mutually perpendicular planes. (body mounted)

SPECIFICATIONS
FIXED INDUCTORS
RFC-L SERIES

Proven reliability molded inductors specifically designed to meet MIL-C-15305 (latest revision). Inductance 1.0 to 10,000uH.



ELECTRICAL CHARACTERISTICS

Inductance Tolerance: 0.1 to 22uH ±10% on Q-Meter
27uH to 10,000 ±5%
1,000 cps bridge

Dielectric Strength: 700 volts RMS at sea level.

Self-Resonant Frequency: Minimum f_0 to be not less than 80% of published data and measured with full length leads on Grid-Dip Meter.

Q: Measured on Q-Meter.

Rating: ½ watt dissipation for L series.

DENSITY CHARACTERISTICS

Volume: L Type — 0.068 cu. in.

Weight: L Type 4.10 grams

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Operating Temperature: −55°C to +125°C.

Terminal Strength: Meets five pound pull test per MIL-C-15305 (latest revision).

Moisture, Vibration, and Shock Resistance: Meets requirements of MIL-C-15305 (latest revision). High frequency 10 cps to 2000 cps @ 15G ± 10% maximum for 12 logarithmic swings, each of 20 minute duration repeated for each of three mutually perpendicular planes. (body mounted)

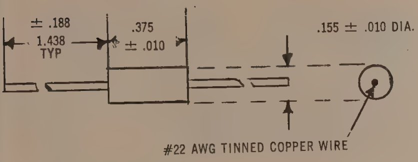
SPECIFICATIONS
FIXED INDUCTORS
RFC-SS SERIES

Molded inductors specifically designed to meet MIL-C-15305 (latest revision). Inductance from 0.15 to 240uH.



ELECTRICAL CHARACTERISTICS

Inductance Tolerance: 0.15 to 330 uH ± 10%
360 to 2400 uH ± 5%
Measured on Q meter per MIL-C-15305 (latest revision).

Dielectric Strength: 700 volts RMS @ sea level

Rated Current: Based on max. temp. rise of 35°C (ambient 90°C) for RFC-SS-0.15 to -330
15°C (ambient 90°C) for RFC-SS-36 to -240

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Operating Temperature: Max. 125°C for RFC-SS-0.15 to -330
Max. 105°C for RFC-SS-36 to -240

Terminal Strength: Meets five pound pull test per MIL-C-15305 (latest revision).

Moisture, Vibration, and Shock Resistance: Meets requirements of MIL-C-15305 (latest revision), high frequency 10 cps for 12 logarithmic swings, each of 20 minute duration repeated for each of three mutually perpendicular planes.

Printing: Color banded.

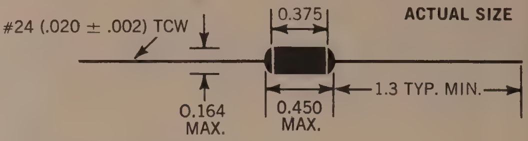
Inductors

WEE-DUCTOR

Miniature Shielded Inductor with high inductance-to-size ratio.
0.10uH to 180,000uH in 76 values
Designed to meet MIL-C-15305C.

The **WEE-DUCTOR** was the first miniature shielded inductor that Nytronics standardized for stock delivery. This encapsulated non-flammable shielded unit in a 0.164″ diameter by 0.450″ long envelope offers the design engineer extremely high inductance for density packaging. The WEE-DUCTOR is designed to meet the environmental requirements of MIL-C-15305 (latest revision).



ELECTRICAL CHARACTERISTICS

Inductance Tolerance: 0.1 to 22uH ±10% (Q-Meter); 27uH to 1,000 ±5% (1KC Bridge); 1,200uH to 56,000uH ±10% (1KC Bridge) 68,000uH to 180,000uH ±20% (1KC Bridge) measured at point on leads ½ inch from body.

Dielectric Strength: 700 volts RMS at sea level.

Self-Resonant Frequency: Minimum f_0 to be not less than 80% of published data, and measured with full length leads on Q-Meter.

Q: Measured on Q-Meter.

Maximum Current: Based on temperature rise not to exceed 40°C at 85°C ambient.

DENSITY CHARACTERISTICS

Volume: 0.0087 cubic inches **Weight:** 0.75 grams maximum
Shielding: Less than 3% coupling with two units measured side by side at 1000 cycles.

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Operating Temperature: —55°C to +125°C.
Terminal Strength: Meets five pound pull test; five 360° rotations in alternate directions per MIL-C-15305 (latest revision).
Moisture, Vibration, and Shock Resistance: Meets requirements of MIL-C-15305 (latest revision). Low frequency 10 to 55 cps @ .06″ maximum total excursion at rate of 1 linear sweep per minute for 2 hours repeated for each of three mutually perpendicular planes. Shock: 50G, 11 M.S.
Marking: Printed with pertinent data.

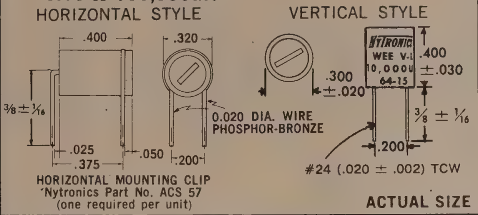
VARIABLE INDUCTORS

WEE V-L

NOW MIL APPROVED MIL-C-15305 (latest revision) — MS21381 & MS21402
Subminiature Shielded Adjustable Inductor
High Q Values
Vertical or Horizontal* Mounting
Unitized Epoxy-Molded Construction
0.400″ by 0.300″
0.10 to 100,000uH



The **WEE V-L** is designed to accommodate close inductance adjustments in high-density circuits that demand exceptional stability and high "Q" in the smallest size available.

The **WEE V-L** is qualified MIL-C-15305 (latest revision). Printed board mounting is facilitated by 0.200 grid spacing and unit has shield construction to allow maximum density packaging. Standardized in 73 stock values.

ELECTRICAL CHARACTERISTICS

Adjustable Inductance Range:	±10%† over entire range as measured per MIL-C-15305 (latest revision).
Q and f₀ Values:	Minimum not less than 80% of specified value at L nominal.
Dielectric Strength:	840 Volts R.M.S. at sea level.
Working Voltage:	300 Volts D.C.
Maximum Current:	Based on temperature rise not to exceed 15°C at 90°C ambient.
Incremental Current:	Defined as the DC current required to cause a five percent reduction in the nominal inductance value.

DENSITY CHARACTERISTICS

Weight:	1.5 grams maximum
Volume:	.0346 cubic inches
Shielding:	3% coupling maximum when two units are tested side by side.

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Use Nytronics Tuning Tool No. B-469 or equal.

Torque:	0.75 to 6.0 inch-oz.
Operating Temperature:	−55°C to +105°C.
Moisture, Vibration, and Shock Resistance:	Meet requirements of MIL-C-15305 (latest revision). Low frequency 10 to 55 cps @ .06″ maximum total excursion at rate of 1 linear sweep per minute for 2 hours repeated for each of three mutually perpendicular planes. Shock: 50G, 11 MS. (body mounted)
Marking:	Manufacturer data printed.
Terminal Pull:	Three pounds.

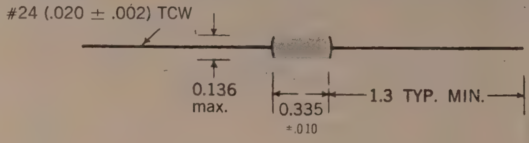
Inductors

SUPER WEE-WEE-DUCTOR

An Ultra-Reliable molded shielded inductor. Subminiature size for high density circuits. Great Inductance-to-size ratio. .10 uH to 10,000 uH. 0.136″ diameter x 0.335″ length. 61 stock values.



The **SUPER WEE-WEE-DUCTOR,** a shielded miniaturized inductor, provides a greater inductance-to-size ratio in a molded epoxy envelope. Use of unique "T" lead construction on all values from .10 uH to 10,000 uH assures exceptional reliability in ranges where fine wire sizes are used. This MS inductor series is designed to meet the stringent requirements of MIL-C-15305 (latest revision). This provides the design engineer with utmost reliability, electrical performance, and minimum coupling in high density packaging.

ELECTRICAL CHARACTERISTICS

Inductance Tolerance: ±10% (Q-Meter).
Dielectric Strength: 700 volts RMS at sea level.
Self-Resonant Frequency: Measured with full length leads on Q-Meter.
Q: Measured on Q-Meter.
Rating: I maximum based on ⅓ watt dissipation.

DENSITY CHARACTERISTICS

Volume: 0.0041 cubic inches.
Weight: 0.50 grams maximum.
Shielding: Less than 3% coupling with two units mounted side by side at 1000 cycles.

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Operating Temperature: −55°C to + 125°C.
Terminal Strength: Meets five pounds pull test; five 360° rotations in alternate directions per MIL-C-15305 (latest revision).
Moisture, Vibration and Shock Resistance: Meets requirements of MIL-C-15305 (latest revision). High Frequency: 10 cps to 2000 cps @ 15G ±10% maximum for 12 lograithmic swings each of 20 minute duration repeated for each of three mutually perpendicular planes. Shock: 50G, 11 MS.
Marking: Color coded per MIL-C-15305 (latest revision).

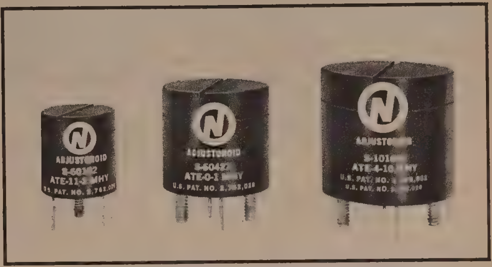
* INCREMENT CURRENT — The D.C. current required to cause a 5% reduction in the nominal inductance value.

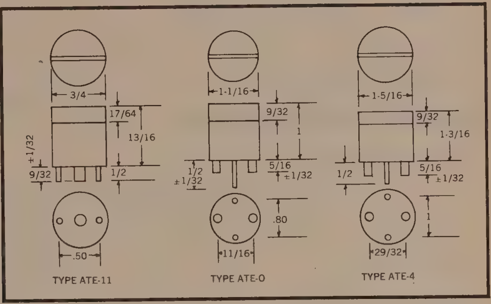
SPECIFICATIONS
ADJUSTOROID SERIES
VARIABLE TOROIDAL INDUCTORS

This radically new development in the toroidal coil field offers a variable toroid in one of three case sizes as shown. The **ADJUSTOROID** was developed especially for printed circuit and similar lightweight applications. This unit is epoxy encapsulated, and there is no physical contact between the adjusting screw and the toroidal winding. Inductance adjustment is achieved through magnetic coupling.



(U.S. Patent Numbers 2,762,020 and 3,100,882)

Variable Toroid
Stepless Adjustment
Very High "Q"
Available to 12 Henries
Epoxy Encapsulated
Fully Shielded



ELECTRICAL CHARACTERISTICS:

Adjustable Inductance Range:	Not less than ±5% from nominal
Q and fo values:	Minimum not less than 80% of specified value at nominal inductance.
Incremental Current:	Defined as the D.C. current required to cause a 5% reduction in the nominal inductance value.

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS:

Weight:	Type ATE-11: 0.83 oz. Type ATE-0: 2.0 oz. Type ATE-4: 4.0 oz.

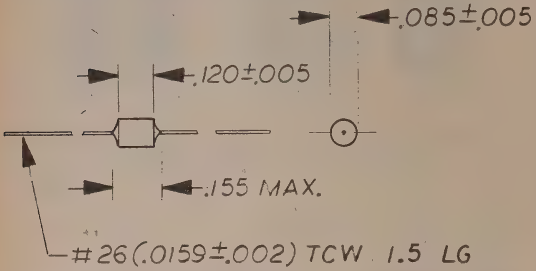
SPECIFICATIONS
FIXED INDUCTORS
PEE-WEE SERIES

The amazing **PEE-WEE DUCTOR** represents a 66% size reduction from the smallest magnetically shielded axial leaded inductor series heretofore available anywhere. Furthermore, this size reduction was obtained with negligible loss of electrical performance by employing several unique concepts in RF coil design.



ALL DIMENSIONS IN INCHES

ELECTRICAL CHARACTERISTICS:

Inductance Tolerance: ± 10% (Std).

L,Q,F, values: Measurements per MIL-C-15305. (latest revision).

Incremental Current: Incremental current in table is for 5% reduction in inductance value.

Dielectric Strength: 300 Volts RMS @ Sea Level.

Temperature Coefficient of Inductance values: Temperature Range of −20°C to +80°C.

Inductance	Temp. Coefficient
0.10uH thru 1.0uH	+50 PPM/C
1.2uH thru 10uH	+100 PPM/C
12uH thru 100uH	+200 PPM/C
120uH thru 1000uH	+500 PPM/C

DENSITY CHARACTERISTICS:

Volume: .0007 Cubic Inches

Weight: 0.12 Grams

Shielding: 5% maximum coupling for two units side by side.

Marking: EIA color coded

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS:

Terminal pull: 3 lbs. minimum.

Environmental: Will meet the requirements of MIL-C-15305 (latest revision).

OPTIONS:

Inductance Values: Additional Inductance Values from .025 uH up to 10,000 uH available on special order.

Inductors

NEW Pee Dee Ductor Series

Marking: EIA color coded

The Pee Dee Ductor is a new, microminiature, axial-leaded RF inductor for hybrid circuit applications. It is significantly smaller than any unshielded inductor available anywhere. Designed to meet the requirements of MIL-C-15305 (latest revision), this reliable, high performance inductor has a standard inductance tolerance of ±10%. Values below 0.1 uh and above 1000 uh are available on special order.

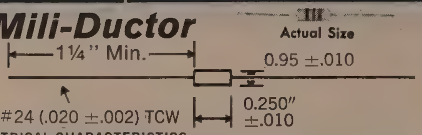
Inductors

NEW —MS INDUCTOR SERIES
75083, 75084, 75085
MOLDED INDUCTOR / 0.100 uh to 1000 uh

Mili-Ductor



The MS Inductor Series are RF Inductors specifically designed to meet the demanding requirements of MIL-C-15305 (latest revision). This MS Series is Epoxy Molded enveloped features reliability and uniformity in a Subminiature Inductor.

ELECTRICAL CHARACTERISTICS
Inductance Tolerance: ±10% over entire range.
Dielectric Strength: 1000 volts RMS at sea level.
Self-Resonant Frequency: Measured per MIL-C-15305 (latest revision).
Rating: Maximum current based on: 35°C rise in 90° ambient for phenolic, 15°C rise in 90° ambient for iron, 35°C rise in 70° ambient for ferrite core inductors.

DENSITY CHARACTERISTICS
Volume: 0.002 cubic inches; **Weight** .030 grams.

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS
Operating Temperature: —55°C to +125°C phenolic core, —55°C to +105°C iron and ferrite core.
Terminal Strength: Meets five pound pull test; five 360° rotations in alternate directions per MIL-C-15305 (latest revision).
Moisture, Vibration, and Shock Resistance: Meets requirements of MIL-C-15305 (latest revision), 10 cps to 2000 cps @ 15G ±10% maximum for 12 logarithmic swings each of 20 minute duration repeated for each of three mutually perpendicular planes. Shock: 50G, 11 MS (body mounted).

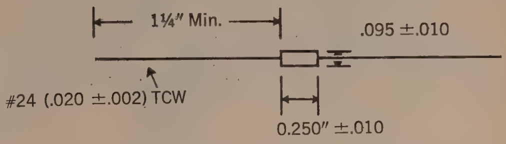
Inductors

DECI-DUCTOR

New Subminiature Inductor 0.10uH to 1000uH Range
0.100″ diameter by 0.250″ length 49 STANDARD VALUES

The **DECI-DUCTOR** offers the design engineer epoxy-molded reliability and uniformity in a subminiature R.F. Inductor. This smallest of Nytronics growing R.F. Inductor line is designed to meet all the environmental specifications of MIL-C-15305 (latest revision).



ELECTRICAL CHARACTERISTICS

Inductance Tolerance: ±10% over entire range.
Dielectric Strength: 700 volts RMS at sea level.
Self-Resonant Frequency: Measured per MIL-C-15305 (latest revision).
Rating: Maximum Current based on 35°C rise in 90°C ambient.

DENSITY CHARACTERISTICS

Volume: 0.002 cubic inches **Weight:** 0.35 grams

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Operating Temperature: —55°C to +125°C

Terminal Strength: Meets three pound pull test; five 360° rotations in alternate directions per MIL-C-15305 (latest revision).

Moisture, Vibration, and Shock Resistance: Meets requirements of MIL-C-15305 (latest revision), 10 cps to 2000 cps @ 15 G ±10% maximum for 12 logarithmic swings each of 20 minute duration repeated for each of three mutually perpendicular planes. Shock: 50G, 11 MS (body mounted).

Marking: Color coded per MIL-C-15305 (latest revision).

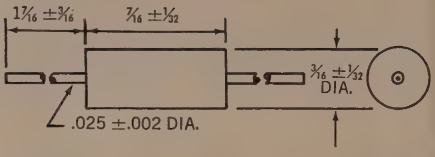
Inductors

MS-INDUCTOR SERIES
75008-75101
MOLDED INDUCTOR
(Manufactured per MS75008 - MS75101)



ALL DIMENSIONS IN INCHES

Proven reliability molded inductors designed to meet MS75008 and MIL-C-15305 (latest revision). Inductance 0.15 to 27.0 uhy.

ELECTRICAL CHARACTERISTICS

Inductance Tolerance: 0.15 to 0.47 uhy ±20%; 0.56 to 27.0 uhy ±10%
Dielectric Strength: 700 Volts RMS at sea level
Max. Temp. Rise: 35°C

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Operating Temperature: —55°C to +125°C.
Terminal Strength: Meets five pound pull test per MIL-C-15305 (latest revision).
Moisture, Vibration, and Shock Resistance: Meets requirements of MIL-C-15305 (latest revision). High frequency 10 cps to 2000 cps @ 15G ±10% maximum for 12 logarithmic swings, each of 20 minute duration repeated for each of three mutually perpendicular planes. (body mounted)
Volume: S Type — 0.012 cu. in.
Weight: S Type — 0.90 grams
Marking: Color banded per MIL-C-15305 (latest revision).

The Wee-Bit
(Nytronics Delay Line Sections)

NYTRONICS
WL 60 NS
Z 500 S

**Unique sectional construction available utilizing individual pre-designed Wee-Bit Pulse Delay elements.
48 hour delivery not 8 weeks.
No tooling expenses.**

The **WEE-BIT** offers the advantage of assembling a unique sectionalized delay line that reduces delivery on prototype delay lines from weeks to days and eliminates expensive tooling and design efforts. Consisting of pre-designed LC sections called Wee-Bits, a discrete value of delay time is offered. The aggregate number of Wee-Bits determines the total delay time and is a function of delay to rise time ratio. An assembly is made of selected Wee-Bits mounted on printed circuit boards that conform to MIL-P-13949B, stacked or single layer and permits increment of delay to be tapped without disturbing uniform pulse shape. Wee-Bit size 0.401″ long by 0.625″ wide by 0.230″ height and are epoxy molded to meet environmental conditions of MIL-C-15305 (latest revision). Temperature range −55°C to 125°C. 300 VDC working voltage. Delay time available per Wee-Bit from 10 nanoseconds to 100 nanoseconds in 10 nanoseconds increments. Wee-Bits also stocked with 200 nanoseconds delay. This unique wee line sectionalized delay line concept allows reduction of approximately 40% in number of sections ordinarily required*, flexibility of design, and line tapping.

NCG Part No.	Delay Time N.S.	Delay Tolerance	Approximate Band Width MHz	DC Resistance (ohms) Max.	Std. Impedance ohms ±10%
WL-10NS	10	±1NS	25 MHz	0.70	500
WL-20NS	20	±5%	19 MHz	1.10	500
WL-30NS	30	±5%	13 MHz	1.40	500
WL-40NS	40	±5%	7.5 MHz	1.60	500
WL-50NS	50	±5%	6.5 MHz	1.90	500
WL-60NS	60	±5%	5.5 MHz	2.10	500
WL-70NS	70	±5%	4.5 MHz	2.25	500

WL-90NS	90	±5%	3.75 MHz	2.60	500
WL-100NS	100	±5%	3.5 MHz	2.80	500
WL-200NS	200	±5%	1.5 MHz	4.20	500

NOTE: Other impedance values available upon request.

LEADING ELECTRICAL PARTICULARS

Delay Tolerance:	±5%
Risetime Tolerance:	±20%
Noise:	1 to 10%, less than 3% for most types
Ripple:	1 to 10%, less than 3% for most types
Attenuation:	0.2 db/usec. to 1.0 db/usec. most types 0.2 db/usec.
Temp. Coefe.:	$150\ (10)^{6}$ us/us —°C
Impedance:	500 ohms ±5%
Operating Voltage:	300 Volts D.C.

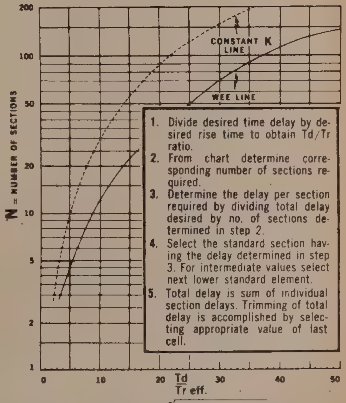
Tr MEASURED AT 10% & 90% and Td MEASURED AT 50% POINTS OF INPUT AND OUTPUT PULSES. Individual Sections furnished in ±5% Tolerance (or ±1NS, whichever is greater) and must be tested in accordance with Nytronics, Inc. DSI 394.

LEADING MECHANICAL PARTICULARS
(for 15 section delay line)

Length of 15 cells	6.125″
Length of 15 cells plus P.C. mounting board	7.141″
Width of cells plus P.C. mounting board	0.750″
Height of cells plus P.C. mounting board	0.330″

Basic cell size: Length — 0.401″
Width — 0.625″
Height — 0.230″

Temperature range and operation environmental conditions are covered by MIL-C-15305 (latest revision).



1. Divide desired time delay by desired rise time to obtain Td/Tr ratio.
2. From chart determine corresponding number of sections required.
3. Determine the delay per section required by dividing total delay desired by no. of sections determined in step 2.
4. Select the standard section having the delay determined in step 3. For intermediate values select next lower standard element.
5. Total delay is sum of individual section delays. Trimming of total delay is accomplished by selecting appropriate value of last cell.

$$Tr\ eff. = \sqrt{Tr^{2}_{OUT} - Tr^{2}_{IN}}$$

IF Tr OUT ≥ 10x Tr IN, Tr eff. = Tr OUT

*Compared to constant K

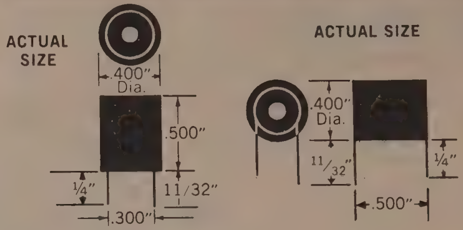
VARIABLE INDUCTORS

VIV-VIH

Miniature with inductance range of 0.10 to 4700uH in 29 values.
Encapsulated in epoxy resin for reliability.
Designed to meet MIL-C-15305 (latest revision).



Terminal Leads #22 (.025 ± .002) VCW

VERTICAL STYLE HORIZONTAL STYLE

The **VARIABLE INDUCTOR** offers high reliability and exceptional stability over extreme temperature variations. This small lightweight unit is furnished in vertical and horizontal styles to facilitate mounting on printed circuit boards. The unit is designed to meet the requirements of MIL-C-15305 (latest revision).

ELECTRICAL CHARACTERISTICS

Inductance Range:	0.33 to 4700uH Tunable Range ±20% 0.15 to 0.22uH Tunable Range ±15% 0.1 Tunable Range ±10% All measurements at 25°C on Q-Meter using miniature alligator clips mounted 1/32" from body. Q values ±20%
Self-Resonant Frequency:	Minimum f_0 to be not less than 80% of published data as measured with Grid-Dip Meter

DENSITY CHARACTERISTICS

Volume:	0.063 cubic inches
Weight:	2.6 grams

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Torque:	0.75 to 5.0 inch-ounces Use Nytronics Tuning Tool No. B-305 or equal.
Operating Temperature:	−55°C to +125°C
Terminal Strength:	Meets five pound pull tests.
Moisture, Vibration, and Shock Resistance:	Meets requirements of MIL-C-15305 (latest revision). Low frequency 10 cps to 55 cps @ .06" total excursion at rate of 1 linear sweep per minute for 2 hours repeated for each of 3 mutually perpendicular planes. Shock: 50G, 11ms.
Core Material:	Iron
Marking:	Manufacturer data printed.

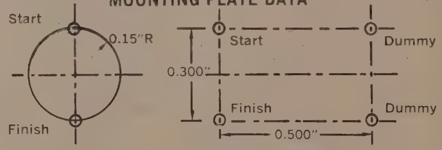
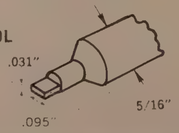
MOUNTING PLATE DATA



VERTICAL HORIZONTAL

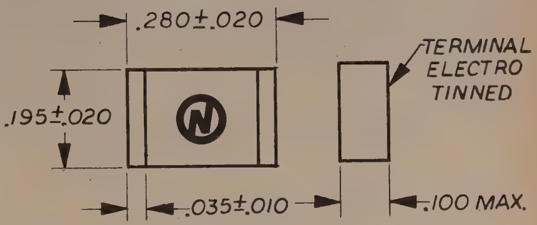
TYPICAL ALIGNING TOOL

B-305



SPECIFICATIONS
CHIP INDUCTORS
WEE-CHIP SERIES

The Wee-Chip Inductor is a magnetically shielded miniaturized fixed inductor made especially for mounting on substrates. The inductor body is constructed of high stability, low loss ferrite, combined with a coil cavity of optimum cross sectional area and mean radius, producing a unit having excellent "Q" factor. Copper terminations are of the wrap-around type for the greatest degree of mounting flexibility.



ELECTRICAL CHARACTERISTICS

Inductance Tolerance:	±10% over entire range; standard.
Dielectric Strength:	500 VRMS

DENSITY CHARACTERISTICS

Volume:	0.0055 Cubic Inches.
Weight:	0.35 grams (Max.)
Marking:	Manufacturer Data Printed

(1) Shielding: 2% max. coupling when two units are tested side by side.
(2) Designed to meet the requirements of MIL-C-15305, Grade 2, Class B.
(3) Stability: Temp. coefficient of inductance ranges from 100 to 500 ppm/°C depending on inductance.
(4) Current Ratings: Based on a 35°C temperature rise from an ambient temp. of 90°C.
(5) L, Q & F_0 measurements made using Boonton 260-A Q-meter.
(6) Other values & tolerances available on special order.

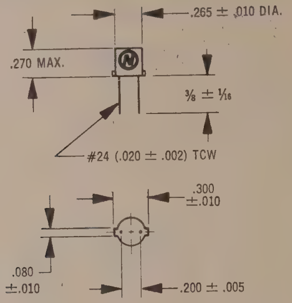
SPECIFICATIONS
FIXED INDUCTORS
PEE-CEE DUCTOR SERIES

The PEE-CEE is designed to meet MIL-C-15305 (latest revision), Grade 1, Class B. Printed board mounting is facilitated by 0.200 grid spacing and unit has shielded construction to allow maximum density packaging. Standardized in 73 stock values.

Subminiature Shielded
High Q Values

Radial Lead Fixed Inductor
0.10 to 100,000uH

Unitized Epoxy-Molded Construction



All dimensions in inches

ELECTRICAL CHARACTERISTICS

Inductance:	±10% over entire range as measured per MIL-C-15305 (latest revision).
Q and f_o Values:	Minimum not less than 80% of specified value
Dielectric Strength:	840 Volts R.M.S. at sea level.
Working Voltage:	300 Volts D.C.
Maximum Current:	Based on temperature rise not to exceed 35°C at 90°C ambient.
Incremental Current:	Defined as the DC current required to cause a five percent reduction in the nominal inductance value.

DENSITY CHARACTERISTICS

Weight:	1.5 grams maximum
Volume:	.015 cubic inches
Shielding:	3% coupling maximum when two units are tested side by side.

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Operating Temperature:	−55°C to +125°C.
Moisture, Vibration, and Shock Resistance:	Meet requirements of MIL-C-15305 (latest revision). Low frequency 10 to 55 cps @ .06″ maximum total excursion at rate of 1 linear sweep per minute for 2 hours repeated for each of three mutually perpendicular planes. Shock: 50G, 11 MS. (body mounted)
Marking:	Manufacturer data printed.
Terminal Pull:	Three pounds.

THIN-WALL
FABRICATED
BOBBINS

THIN-WALL STRUCTURE

Provides maximum winding space with added turns at the inside small diameter.

KAPTON MATERIAL

Solvent resistant.
Withstands temperatures from — 296°C to + 400°C.
Will not fuse or melt in flames.
Radiation resistant.
Maintains physical, chemical and electrical properties over a wide range of temperature and frequency.

DIA-NETICS SERVICE

Assures a dependable source of space-saving bobbins or complete coils at low initial setup cost. Send us a print or description for immediate attention.

syntronic product index

COMPLETE LINE OF YOKES & COILS FOR PRECISION CRT DISPLAYS

Syntronic Instruments, Inc., founded in 1949 is one of the pioneers in the development of CRT precision yokes. We offer a wide selection of standard deflection yokes and coils designed and fabricated to meet industrial and military specifications. Our most popular styles and sizes are listed in the product index shown on the next three pages. Catalog pages and/or engineering drawings showing performance characteristics, electrical data and dimensions are available on request.

As the largest manufacturer of precision yokes we have developed our engineering, prototype and production capabilities to meet the needs of the information display engineer. If the component you need is not listed among our standard items, we invite you to contact one of our field sales engineers—or call one of our yoke specialists at (312) 543-6444. Here's how we will go to work to help you with your CRT display design problem. First we develop an idea, making something tailored for your application. Then, you may want 10 pieces to perform just like the prototype. Then 100 or 1,000. We have the production flexibility and the know-how to make one part or a thousand. We have the whole package . . . ideas and good repetitive products—yokes, coils, accessories, assemblies. Your exact requirements can be met for cameras, flying spot scanners, scanning electron microscopes, storage devices, etc. If you are designing or building a display, ask us to put our 25 years of experience to work for you.

PERMANENT MAGNET ACCESSORIES

B4118 Anti-Pincushion Device for 7/8" and 1" CRT necks. Mounts on front of yoke. Ideal for airborne or other lightweight displays.

C4077 Anti-Pincushion Device for 1 7/16" CRT necks. Eliminates geometric distortions over entire CRT face when used with independent circuit correction of horizontal and vertical traces.

B5129 Beam Centering Magnet Assemblies for 7/8" Dia. neck CRT's. A series of easily adjustable devices available in 9 different ranges of flux density. Screwdriver adjustment.

B4323 Beam Centering Assemblies. Available in various magnet strengths for 1 1/8" neck CRT's. Screwdriver adjustment.

C4268 Beam Centering Device. A simple, low cost unit for 1 1/2" neck CRT's. Adjusts by moving tabs. Available in various magnet strengths. Locks securely. Corrects gun misalignment and poor aperature flooding.

MECHANICAL ACCESSORIES

D8300 CRT mount for 5" round tube. Maximum stability. Quick CRT removal. Rugged four-rod frame comes with **D7450** or **D7675** micropositioner(s) and optional **C7755** fixed coil positioners. Available with or without electromagnetic shielding.

D8305 CRT mount for 7" round tube. Similar design to **D8300**, using standard positioners.

D8310 CRT mount for 10" round tube. Similar design to **D8300**, with stepped front. Uses standard positioners.

Special CRT mounts for large CRT's up through 36" diameters are available by special order. Standard four-rod frame.

D7450 (for 3.50" O.D. coils)**/D7675** (for 4.00" O.D. coils). Micropositioner for deflection yoke, focus coil or lens. Moderate cost, minimum backlash. Independent fine adjustments with locks for: pitch, yaw, horizontal and vertical translation. Use with any standard four-rod mount assembly.

C8795 Yoke rotator for **D7450/D7675** micropositioner. For easy alignment of yoke's deflection axis to a fixed mechanical axis. Rotational range ±5° from center position. Screwdriver adjustment.

C7755 Fixed coil positioner. Holds magnetic components, such as centering coils or astigmatism correction coils, rigidly and accurately. Use with any standard four-rod mount assembly.

C8450 Low-cost coil positioner for 4" O.D. coils. Horizontal and vertical translation only. Use with standard four-rod mount assembly.

D4499 Micrometer-controlled precision aligner. For fast accurate alignment of deflection yokes, focus coils and pincushion correctors. Bench mount design ideal for laboratory research and prototype evaluation.

C6161 Yoke rotator for **D4499** micropositioner for easy alignment of yoke's deflection axis to a fixed mechanical axis. Rotational range ±5° from center position. Screwdriver adjustment.

syntronic

yoke application checklist

Yoke selection involves consideration of many interacting factors: the requirements of the display system, the cathode ray tube to be used, and the circuitry involved.

The Yoke Application Checklist on the opposite page, based on our twenty-five years of experience in the design and manufacture of yokes, has been developed to illustrate some of these interactions, and to provide you with a checklist of information to be evaluated by our yoke specialists.

As a result of thorough evaluation, a yoke of more reasonable cost and superior performance can often be used when it is possible to allow some small trade-off variations in these interacting factors.

When working with Syntronic Instruments, Inc., it is not necessary for you to become deeply involved in the design of the yoke. By merely filling out the checklist in whole or in part and submitting a copy to our engineers, you can be sure that all factors will be considered and that we will be able to recommend a yoke design that will be best suited for your application.

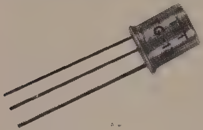
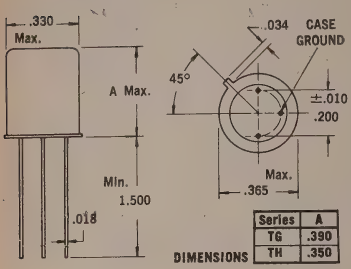
MINI-L HERMETICALLY SEALED R.F. INDUCTORS — TG, TH SERIES





Series	A
TG	.390
TH	.350

TG SERIES

- DESIGNED TO MEET THE REQUIREMENTS OF MIL-T-27, GRADE 4, CLASS S.
- FREQUENCY RANGE: 10 to 500 KHz.
- INDUCTANCE RANGE: 1 to 500 mh.
- INDUCTANCE TOLERANCES: ±5%.
- INDUCTANCE STABILITY: ±2% (−20°C to +85°).

TH SERIES

- DESIGNED TO MEET THE REQUIREMENTS OF MIL-C-150305, GRADE 1, CLASS 0.
- FREQUENCY RANGE: 100 KHz to 10 MHz.
- INDUCTANCE RANGE: 10 uh to 1000 uh.
- INDUCTANCE TOLERANCES: 10 uh through 33 uh ±10%, 39 uh through 130 uh ±5%, greater than and including 150 uh ±3%.
- INDUCTANCE STABILITY: ±2% (−20°C to +85°C).

TG SERIES

- HERMETICALLY SEALED, HIGH "Q" INDUCTOR IN A TO-5 TRANSISTOR CONFIGURATION.
- LOW EXTERNAL MAGNETIC AND ELECTROSTATIC FIELD.

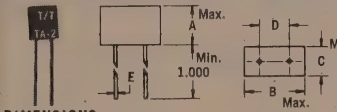
MINI-L ENCAPSULATED R.F. INDUCTORS — TA, TF, TB & TD SERIES



DIMENSIONS

Series	A	B	C	D	E	Max. Power
TA	.225	.210	.110	.100	.020	0.2 Watt
TB	.300	.280	.160	.200	.025	0.33 Watt
TD	.390	.390	.197	.200	.025	0.5 Watt
TF	.225	.210	.110	.100	.020	0.2 Watt

TA SERIES

- MIN. "Q": 60 to 70.
- INDUCTANCE RANGE: .1 uh to 10 uh.
- FREQUENCY RANGE: 1 to 50 MHz.
- INDUCTANCE TOLERANCES: Less than 1.0 uh, ±10%. Greater than or equal to 1.0 uh, ±5%. Closer tolerances available by special request.
- INDUCTANCE TC: +50 PPM/°C maximum.
- MAXIMUM POWER DISSIPATION: 0.2 watt.

TF SERIES

- MIN. "Q": 60 to 80.
- FREQUENCY RANGE: 20 to 300 MHz.
- INDUCTANCE RANGE: .01 to 1 uh.
- INDUCTANCE TOLERANCES: Less than 0.1 uh, ±20%. Greater than or equal to 0.1 uh, ±10%. Closer tolerances available by special request.
- INDUCTANCE TC: +200 PPM/°C maximum.
- MAXIMUM POWER DISSIPATION: 0.2 watt.

TD SERIES

- MIN. "Q": 40 to 80.
- INDUCTANCE RANGE: 100 to 10,000 uh.
- RECOMMENDED FREQUENCY RANGE: 50 kHz to 10 MHz.
- INDUCTANCE TOLERANCE: ±5%. Closer tolerances available by special request.
- INDUCTANCE TC: From +60 PPM/°C, maximum to +300 PPM/°C maximum, depending upon inductance value.
- MAXIMUM POWER DISSIPATION: .50 watt.

TB SERIES

- MIN. "Q": 50 to 80.
- RECOMMENDED FREQUENCY RANGE: 50 kHz to 35 MHz.
- INDUCTANCE RANGE: 10 to 1,000 uh.
- INDUCTANCE TOLERANCE: ±5%. Closer tolerances available by special request.
- INDUCTANCE TC: From +60 PPM/°C maximum to +300 PPM/°C maximum, depending upon inductance value.
- MAXIMUM POWER DISSIPATION: .33 watt.

- DESIGNED TO MEET THE REQUIREMENTS OF MIL-C-15305, GRADE 1, CLASS B (−55°C to +125°C). +125°C).
- DIELECTRIC WITHSTANDING VOLTAGE: 700 volts rms.

SEARCHING FOR . . .

RELIABILITY AND PERFORMANCE IN TINY WIDEBAND TRANSFORMERS?

VARI-L
FP-518
LIBERTY
IN GOD WE TRUST

Discover Vari-L's new substrate compatible flatpack wideband transformers.

- **Subminiature size — ¼"x¼"x⅛"**
- **0.5 Db Insertion loss**
- **Ribbon leads**
- **12.5 to 600 ohm impedance range**
- **Up to 1 GHz bandwidth**
- **MIC Substrate compatible**
- **Balanced & unbalanced configurations**

Their small size, easily solderable or weldable planar ribbon leads, and high performance/high reliability design makes them ideal for MIC substrate and conventional printed circuit applications.

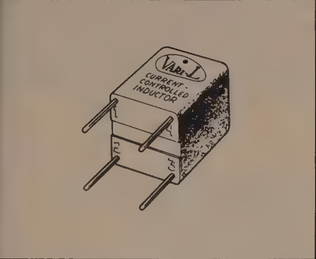
VARI-L ELECTRICALLY VARIABLE INDUCTORS



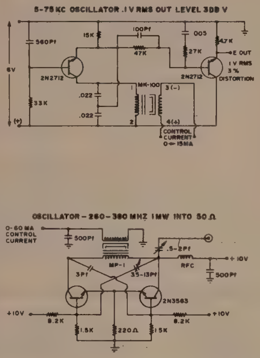


FIGURE 19
TYPICAL VARI-L CIRCUITS

The **Vari-L Inductor** consists of a high-Q coil wound on a ferromagnetic core, and an electromagnetic element for controlling its inductance. The coil is connected into an oscillator, amplifier or filter, along with suitable capacitance to establish the initial parameters; current in the control winding will then do the tuning. The rate of control can be slow for semi-fixed operation — or fast, up to several thousand Hz, for sweep or frequency modulation. The control current is usually in the milliampere range, or can be made higher to fit special applications.

The component is entirely solid-state, with no moving parts to get out of adjustment or wear out, so it can safely be located remote from the control point or potted as part of your own intricate subassembly.

Vari-L tuning has been in use for 15 years in numerous industrial instruments, and in critical military applications including outer space and oceanography. It is a natural for such sweep services as TV-alignment generators, spectrum analyzers, and panoramic receivers; but it is also chosen frequently because of its non-mechanical advantages such as remote control, sub-miniaturization, or automatic (closed-loop) tuning.

The **"MITE"** Series described below was brought out to keep step with the trend toward printed circuits and smaller equipment; but we also make larger units for high-power circuits or multi-function service.

We will quote promptly on your special requirements. Contact factory sales for appropriate bulletin.

Bantam Jack Panels

Bantam Jack Panels are designed to satisfy the increasing demand for more compact patchfields in modern electronic and communication equipment. Bantam Jack Panels, with miniaturized jacks, provide twice the number of jacks in a standard size panel. They require only ½ the rack space previously used by conventional panels. The new panel assemblies weigh 65% less when compared to an assembly using an equivalent number of jacks on a conventional jack panel. ■ Bantam Jack Panels are compact, lightweight, and yet provide the same dependable service as the long established telephone types. This new design offers 96 jacks (48 pairs) in a 1¾ inch x 19 inch standard sized panel. The jacks on this panel are spaced to prevent the cross patching of adjacent circuits when using double plugs.

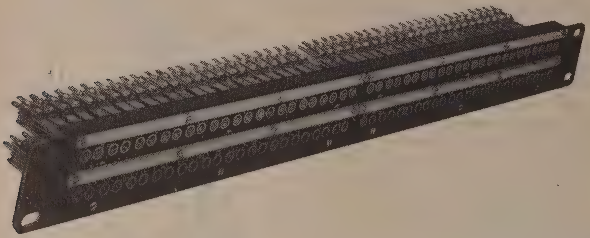
specifications

1. **Panel:** Aluminum alloy, extruded. Finished black anodized per Mil-A-8625A. Overall dimensions 1¾"x19"—Standard EIA mounting centers.
2. **Jack Mounting:** Four moulded plastic inserts, each provides for 24 jacks. Pairs of jacks on 5/16 inch centers. Double-row panel provides 96 jacks total. Blank inserts can be furnished where only single row of jacks is required.
3. **Designation Strip:** Extruded clear plastic.
4. Panel assemblies are available with a wide variety of two and three-conductor jacks. See listing of Bantam jacks for complete details.

PJ-731	Double row panel, assembly less jacks, holds 96 jacks.
PJ-737	Double row panel, with 48 pair (96 total) PJ-818 jacks.
PJ-739	Double row panel, with 48 pair (96 total) PJ-839 jacks.
PJ-724	Panel inserts, less jacks, 24 holes.
PJ-700	Panel inserts, blank (same as PJ-724 without holes).
PJ-736*	Double row panel, with 104 PJ-818 jacks.
PJ-738*	Double row panel, with 104 PJ-839 jacks.

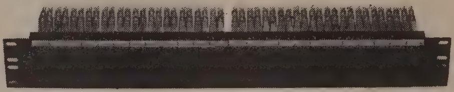
*Panels with 104 jacks (26 per insert, jacks all on 5/16 inch centers) are available on special order.

Custom panel assemblies with up to 104 jacks are available on special order.



Bantam Triple Row Jack Panel

Bantam Triple Row Jack Panels provides 144 jacks in a 2⅝ inch x 19 inch size panel. The specification and construction of this panel is the same as Bantam Double Row Panels except width of panel is one and one-half the standard panel size. Mounting centers conform to standard EIA rack spacing. Three rows of jacks with 48 jacks in each row. These three rows are particularly desirable for use in 2 wire and 4 wire VF Circuit applications where space can be saved by having three verticle jacks appear as a jack set.



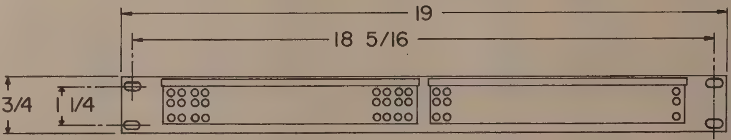
"BANTAM TRIPLE ROW JACK PANEL — 2⅝" WIDE"

BANTAM TRIPLE ROW JACK PANEL

PJ-732	Triple Row Panel Assembly, less jacks, holds 144 jacks
PJ-733	Triple Row Panel, with 144 PJ-818 Jacks
PJ-734	Triple Row Panel, with 144 PJ-839 Jacks
PJ-735	Triple Row Panel, with 96 PJ-839 Jacks (top and middle row) 48 PJ-838 Jacks (bottom row).

Bantam 2 + 1 Jack Panels

Bantam 2 + 1 Jack Panels are the newest development in the ADC line of Bantam components which offer the maximum in patching density. These unique three row panels feature three miniature jacks on a single frame, which effectively requires ⅓ less space than regular Bantam jacks. The Bantam 2+1 panels include 48 of these three conductor jacks, in a standard size 1¾ inch wide by 19 inch long panel. These panels were especially designed to provide vertically positioned jack sets such as the "Line", "Equipment" and "Monitor" jacks in a Voice Frequency Circuit. The Bantam 2 + 1 Jacks provided in these panels are available with solder type terminals and with wire wrap terminals.



"BANTAM 2 + 1 JACK PANEL — 1¾" WIDE"

Bantam Jacks

Bantam Jacks will meet the electrical, mechanical and environmental requirements of the military specification for long frame telephone jacks. Although reduced in size these jacks will provide the same reliable service equal to that expected from regular size telephone jacks. These jacks are available in a variety of two and three conductor types, with isolated circuit contacts as well as normalling contacts.

specifications

Frame: Steel, Cadmium plate with chromate conversion coating to withstand 50 hours of salt spray.
Springs: Nickel silver.
Contacts: W. E. #1 gold alloy, cross-bar contacts are welded to springs.
Insulation: Spacers, Phenolic Type PBE-P per MIL-P-3115B.
Bushing: Brass, silver soldered to frame. Finish same as frame.

If gold plating is required for all surfaces, jacks should be ordered as the PJ number with a "G" suffix. ADC uses .00005 gold per MIL-G-45204, TYPE II. The solder lugs are not tinned for gold plated jacks. Any requirements other than those described require special notation.

Bantam Twin Jacks

Bantam Twin Jacks are the miniature equivalent of the ADC PJ-482 or the WE 482A. These three conductor type jacks have normal contacts on both the tip and ring springs strapped, thereby reducing and simplifying wiring. The Bantam Twin Jacks are designed with sleeves on .796 inch centers and are made to mount in the ADC PJ-731 Double Row Panels and the PJ-732 Triple Row Panels. Bantam Twin Jacks are available with solder terminals and wire wrap terminals.

Bantam 2 + 1 Jacks

Bantam 2 + 1 Jacks offer almost unbelievable space saving advantages . . . Savings even greater than regular Bantam jacks. Bantam 2 + 1 Jacks literally permits tripling of the patching density of a 1¾ inch wide panel. This unique design features three jacks on a single frame. The jacks are three conductor types. Two of the jacks have normal contacts on both tip and ring springs. These normal contacts are strapped to simplify wiring. Ideally suited to VF Circuit applications where two of the jacks would function as "Line" and "Equipment" jacks and the third as a "Monitor" jack. Up to 48 Bantam 2 + 1 Jacks can be mounted on a 1¾ inch wide by 19 inch long panel. Bantam 2 + 1 Jacks are available with solder type terminals and, with wire wrap terminals. These very remarkable miniature jacks are specifically designed to mount in the Bantam 2 + 1 Panel PJ-721.

Bantam Patch Cords

Bantam Patch Cords are plastic jacketed, shielded cords complete with molded-on plugs. The plugs are made with molded insulation between conductors. Bantam Patch Cords are available with single and double two and three conductor plugs. A cord strain relief feature is included in the plug construction.

Bantam plugs may be gold plated on special order per MIL-G-45204, Type II, .00005 inches thick.

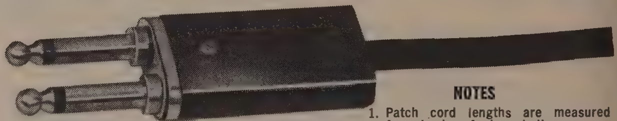
Patch Cords

ADC Patch Cords have become standards in the communications industry. The heavy Nylon braided jacket excels in abrasion resistance. All cords have been designed to give the ultimate combination of durability, flexibility and reliability. ADC has numerous combinations of special cord assemblies using virtually every plug combination required. You are invited to submit your requests or requirements for quotations.



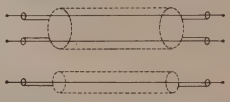
PATCH CORD LENGTH	TOLERANCE
6 inch	+ .375″ —.00″
1 foot	+ .75 ″ —.00″
2 feet	+1.125″ —.00″
3 feet	+1.375″ —.00″
4 feet	+1.625″ —.00″
5 feet	+2.0 ″ —.00″
6 feet	+2.25 ″ —.00″
10 feet	+2.625″ —.00″

NOTES

1. Patch cord lengths are measured from backs of plug shells.
2. All cords and cord assemblies will withstand 500 V, 60 Hz PBT between all conductor. Cordage is designed to have minimum leakage resistance of 50 Megohms with 100 volts applied.

2 CONDUCTOR SHIELDED, CORD ASSEMBLIES

Length	Cord w/ PJ-1 Plugs
6 inch	PJ-10½
1 foot	PJ-11
2 feet	PJ-12
3 feet	PJ-13
4 feet	PJ-14
5 feet	PJ-15
6 feet	PJ-16
10 feet	PJ-10



These cords provide two tinsel wire conductors plus a braided shield. The overall jacket is braided nylon. Black nylon is standard.

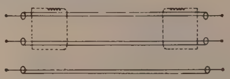
3 CONDUCTOR SHIELDED, CORD ASSEMBLIES

Length	Cord w/ PJ-2 Plugs	Cord w/ PJ-051R Plugs
1 foot	PJ-71	PJ-81
2 feet	PJ-72	PJ-82
3 feet	PJ-73	PJ-83
4 feet	PJ-74	PJ-84
5 feet	PJ-75	PJ-85
6 feet	PJ-76	PJ-86

These cords provide two tinsel wire conductors plus a braided shield. Overall jacket is braided nylon. Black nylon is standard.

2 CONDUCTOR UNSHIELDED, CORD ASSEMBLIES

Patch Cords Length	Cord w/ PJ-047R Plugs
1 foot	PJ-471
2 feet	PJ-472
3 feet	PJ-473
4 feet	PJ-474
5 feet	PJ-475
6 feet	PJ-476



The PJ-180 and PJ-470 series cords offer tinsel wire conductors, thermo plastic insulated. Standard color for PJ-180 series patch cords is slate. The standard color for the PJ-470 series cords is red.

3 CONDUCTOR SHIELDED, CORD ASSEMBLIES

Length	Cord w/ PJ-7 Plugs	Cord w/ PJ-8 Plugs
1 foot	PJ-171	PJ-91
2 feet	PJ-172	PJ-92
3 feet	PJ-173	PJ-93
4 feet	PJ-174	PJ-94
5 feet	PJ-175	PJ-95
6 feet	PJ-176	PJ-96

The PJ-90 and PJ-170 series cords provide four tinsel wire conductors, plus a shield common to both sleeves on the plugs. Standard color for these cords is black.

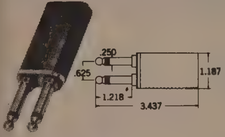
ADC PRODUCTS

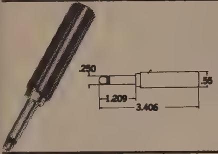
Division of MAGNETIC CONTROLS COMPANY
4900 West 78th Street, Minneapolis, Minnesota 55435
Tel: (612) 835-6800 — TWX: 910-576-2832 — TELEX: 29-032

PJ-310 — Manufactured under license from Western Electric. Introducing ADC's PJ-310 — equivalent to WECO's popular 310 plug. Designed for use with 1/4" diameter tip, ring, and sleeve jacks. Profiled construction allows for close contour tolerances. Nylon insulation provides long life wear resistance.



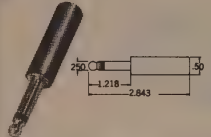
.250
.625
1.187
1.218
3.437

PJ-1 — Equivalent WE-241. Heavy duty die cast frame. Black phenolic shell. Has self-aligning plug sleeves on 5/8" centers for use with all standard jack panels. Two tip conductors, plus sleeve connection common to both sleeves.



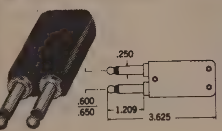
.250
.56
1.209
3.406

PJ-047R,B—Equivalent WE-347. Designed for use with tip and sleeve jacks. Molded insulation, red (R) or black (B) plastic handle, design and construction in accordance with MIL-P-642B specifications.



.250
.50
1.218
2.843

PJ-055B,M,R. — Formerly ADC PJ-5, fits 1/4" phone jacks. Black (B) or red (R) plastic or Metal (M) shell. Screw terminals, designed and manufactured in accordance with MIL-P-642B.



.250
.600
.650
1.209
3.625

PJ-327 — Equivalent WE-327. Twin plug provides two electrically independent 2 conductor plugs in a black phenolic shell which is notched to indicate polarity. Self-aligning plug sleeves are on 5/8" centers. Designed and constructed in accordance with specification MIL-P-642B.

Bantam Lamp Sockets accepts T-1¼ style Bi-Pin base incandescent lamps and the ADC Bantam LED module. Both lamps and LED's are available in 6, 14, and 28 volt ratings and in red, green, amber, and white colors (lamp caps for the incandescent lamps). Bantam lamp sockets mount in panels in the same manner as bantam jacks.

SPECIFICATIONS:

Case is glass filled nylon. Conductor lugs are die formed of nickel silver with tin-dipped solder lugs.

PJ-850	Solder Lamp Socket

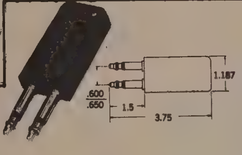
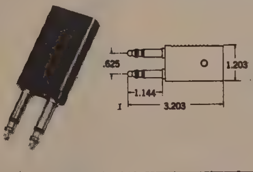
1.187
.600
.650
1.144
3.75

PJ-7 — Equivalent WE-425. Twin type plug with tip, ring and sleeve conductors on 5/8" centers for use with all standard jack panels. Designed to mate with three conductor jacks having 1/4" diameter sleeves. Molded insulation. Black phenolic shell is notched to indicate polarity.



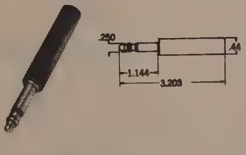
1.187
.600
.650
1.5
3.75

PJ-8 — Dual three conductor type with same conductor configuration as PJ-2, designed for non-shorting of tip and ring circuits when used with PJ-339, WE-239A or similar jacks. Black plastic handle notched to indicate polarity.



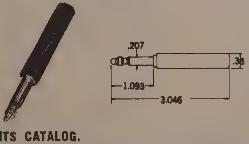
.625
1.203
1.144
3.203

PJ-9 — Equivalent WE-338. Designed for applications requiring two separate 3 conductor circuits. Will mate with three-conductor jacks having 1/4" diameter sleeves. Molded insulation, black plastic handle notched to indicate polarity. Self-aligning plug sleeves on 5/8" centers. Has two separate cord entry holes and requires "Y" type cord or two separate cords.



.250
.44
1.144
3.203

PJ-051R,B — Equivalent WE-310. Designed for use with 1/4" tip, ring and sleeve jacks. Molded insulation, red or black plastic shell, three conductor. Is in accordance with MIL-P-642B.



.207
.38
1.093
3.046

PJ-309 — Equivalent WE-309. Three conductor type. Has .207 diameter sleeve (small diameter). Intended for use with ADC PJ-246, PJ-249 and similar three circuit jacks which have .210 I.D. sleeves. Molded insulation — red plastic handle. Designed and constructed per MIL-P-642B.

FOR COMPLETE LINE OF COAXIAL PLUGS, SEE ADC COMMUNICATIONS COMPONENTS CATALOG.

Jacks

TELEPHONE TYPE

ADC is recognized as a leading supplier of long frame, telephone type jacks. As evidence of their outstanding quality, ADC jacks are used by the country's foremost manufacturers of communication equipment. The unique, ADC one-piece frame is strong, dimensionally stable and readily interchangeable both mechanically and electrically with commonly used jacks. Plating withstands 50-hour salt spray tests. W. E. #1 gold alloy contacts are welded to nickel silver springs. Lugs are hot tin dipped. Insulation is high grade phenolic.

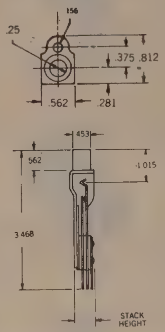
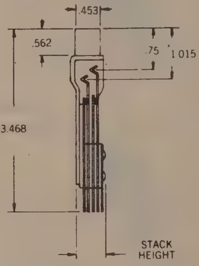
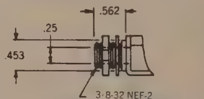
TWO CONDUCTOR

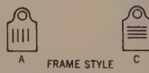


THREE CONDUCTOR





THREADED SLEEVE AVAILABLE ON SPECIAL ORDER



SPECIFICATIONS:

Frame: Steel, plated to withstand 50 hours salt spray per Mil-STD-202, Method.
Sleeve: Brass, nickle plated.
Springs: Nickle silver with tinned lugs.
Insulators: Phenolic, per Mil-P-3115 B type.

MILITARY JACKS

Designed to meet the rugged, exacting requirements of military applications. These ADC jacks are made in accordance with Mil-J-641B specifications. Highest quality materials and closely held tolerances on dimensions conform with military specifications.

Schematic Diagram	MIL Jacks	Frame Style	Stack Height (Inches)	Schematic Diagram	MIL Jacks	Frame Style	Stack Height (Inches)

*For use with PJ-309 or other similar type plugs having .207″ diameter sleeves.

**Caution — Because of Stack Height these "A" frame jacks cannot be installed on 5/8″ centers. "C" Frame version if not listed can be furnished on special order.

TWIN JACKS

ADC Twin Jacks are essentially two jacks with a common mounting frame. Jack sleeves are on 5/8″ centers for vertical mounting in standard jack panels. Normal springs are cross-connected or strapped. Jack sleeves are brass, nickel plated. Die formed springs are nickel silver. Frame and hardware are steel, cadmium-chromate plated to withstand 50 hours salt spray.

FOR COMPLETE LINE OF COAXIAL PLUGS, SEE ADC COMMUNICATIONS COMPONENTS CATALOG.

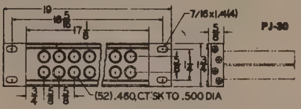
Jack Panels

ADC offers the most complete assortment of jack panels available today. ADC panels are used in television and broadcasting stations, recording studios, industrial paging systems, and communication equipment of all kinds where there is a need to efficiently switch and distribute audio signals. Molded of solid phenolic, reinforced with steel to provide maximum rigidity and strength. Jacks are spaced to permit use of any standard double plug with ⅝″ spacing. Mounting brackets and designation strips* furnished with each panel. All panels designed to fit standard 19″ relay rack. Consult ADC for your standard and special jack panel requirements.

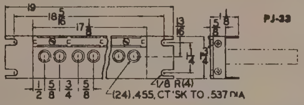
*The jack panels as illustrated are equipped with ADC standard designation strips as shown. PJ-30, PJ-35, PJ-36 and PJ-37 type panels can be supplied with the reinforcement strips drilled and tapped to accommodate the Western Electric equivalent designation strips (PJ-899A, PJ-899B, PJ-903A and PJ-903B). The suffix "A" added to the part number denotes panels which are modified to accommodate these alternate type designation strips. Designation strips are to be ordered separately.

SPECIFICATIONS

Panel: Molded, thermoset plastic per Mil-M-14F, Type CFG, black.
Mounting Brackets: PJ-31 and PJ-33: Die cast zinc, finished black lacquer. PJ-30, PJ-35, PJ-36, PJ-37: Steel, finished cadmium + chromate per Mil-F-14072 #M262, Type II.
Reinforcing Strips: PJ-31 and PJ-33: Steel, finished nickel plated. PJ-30, PJ-35, PJ-36, PJ-37: Steel, finished cadmium + chromate per Mil-F-14072 #M262, Type II.



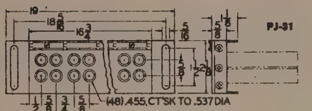
PJ-30
Double Panel. Holds 52 jacks — requires 1¾″ panel space. Double designation strip. Brackets for flush rack mounting. All jack mounting holes on ⅝″ centers.



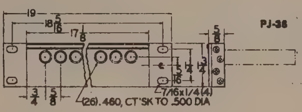
PJ-33
Single Panel. Holds 24 jacks. Holes are spaced to prevent patching adjacent circuits. Requires 1¾″ panel space.

FOR LAMP SOCKET AND CAPS,
SEE ADC COMMUNICATIONS COMPONENTS CATALOG

PJ-35 Same as PJ-30, except has 7″ standoff mounting brackets.



PJ-31
Double Panel. Holds 48 jacks. Holes are spaced to prevent patching adjacent circuits. Requires 2⅛″ panel space.



PJ-36
Single Panel. Holds 26 jacks — requires 1¾″ panel space. Brackets for flush rack mounting. All jack mounting holes on ⅝″ centers.

Molded Terminal Blocks

ADC Pin Terminal Blocks are molded of durable, black thermoset plastic per Military specifications MIL-F-14F. Terminals are brass with electro-tin plating for lasting solderability. The PJ-101 series blocks have terminals graduated in length for ease of wiring. All Terminal Blocks are numbered along the top row for easy terminal identification.

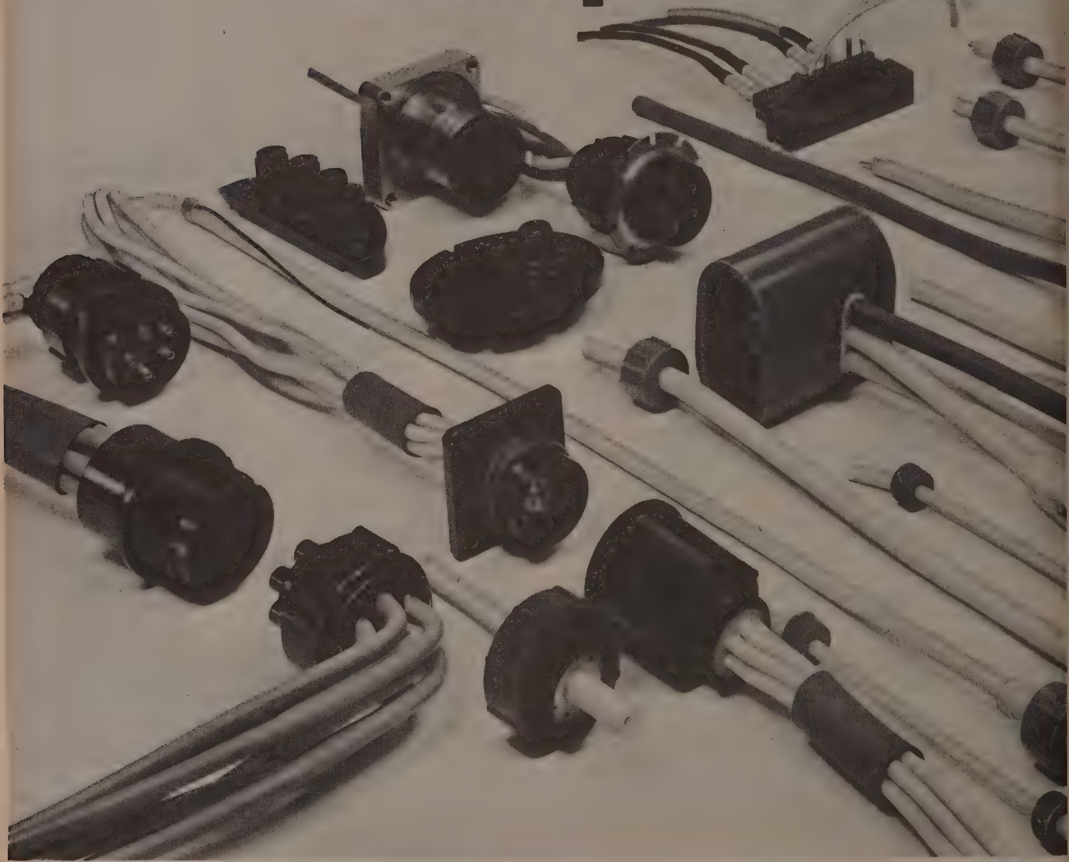
Our high-voltage connectors and lead assemblies have everything.

Except corona.



We designed that out, right at the start. For safety's sake. And while we were at it, we designed-*in* compactness, light weight, quick-disconnectability...and reliability.

We're AMP Capitron Division, a leading designer and manufacturer of custom high-voltage, high-altitude, high-temperature hermetic connectors, lead assemblies and receptacles. For commercial and military applications.

We put a lot of effort into research and development of high-voltage interconnection products. And make it work for you on power supplies modulators, pulse-forming networks, high-voltage transformers, magnetrons, klystrons, traveling wave tubes and cathode ray tubes.

Here are some key features of our products. If you'd like further information, please call 717-367-1105. Or write AMP Capitron Division, Elizabethtown, Pa. 17022.

Hermetic connectors

- Safe—no exposed high voltage parts
- Space saving—maximum performance from the minimum size and weight
- Color coded for easy identification
- Fast connect and disconnect
- Wide temperature range (-55°C to +125°C)
- Positive mating of lead into receptacle
- RFI shielding—optional
- Fungus, moisture, oil, and chemical resistant
- High altitude operation—up to 80,000 feet without voltage derating
- Excellent mechanical strength—resistant to vibration and shock
- High dielectric strength
- Preassembled—no tools required
- High reliability—operates under extreme environmental conditions
- Versatile—top access, splice or bulkhead application
- Voltage rating: to 150,000 VDC.
- One through nine positions
- Radiation resistant
- Lead wire remains flexible from -62°C to +250° C
- Meets applicable military specifications
- Quick, easy installation

Lead assemblies and receptacles

- Lightweight, space saving, safe
- Wide temperature range: -55° C to +125° C (-67°F to +257°F)*
- Voltage ratings: to 50,000 volts DC†
- Easy to install—no tools needed
- Insulation: extruded silicone rubber
- Receptacles: ceramic or glass epoxy
- Quick disconnect
- High dielectric and mechanical strength
- Hermetically sealed and corona-resistant
- High altitude operation: up to 70,000 ft. without derating
- Meets applicable mil. specs. for shock and vibration resistance
- RFI shielding optional

* Higher temperature components up to + 200° C (+392° F) on request.

† Special designs to 200,000 volts DC on request.

AirBorn Connectors for Inter-equipment Connections– Cable to Panel, Cable to Cable, and Drawer to Cabinet

Two series of miniature, rectangular connectors with rugged .0625″ dia. contacts. Both available with stainless steel shells, mounting plates, split hoods, and environment-proof features.

Series K, EK: Features crimp, removable contacts with 50 lb. minimum resistance to push-out.

Series P, EP: Features solder-cup contacts retained in molding.

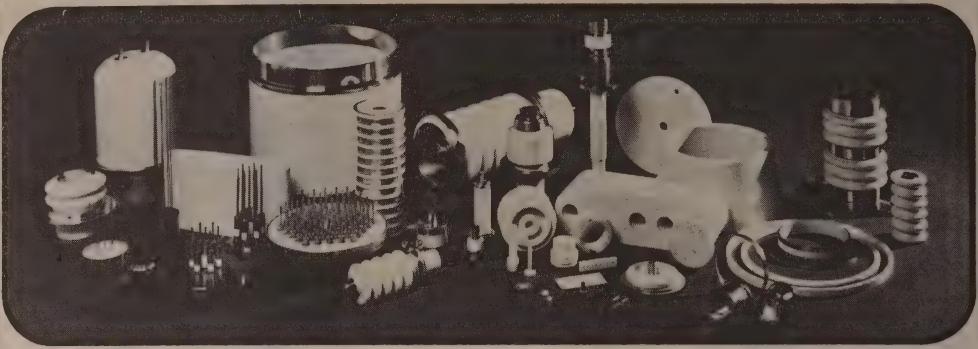
ALBEROX ... *For outstanding performance in high temperature, hermetic terminals.*

We're SPECIALISTS in brazing METAL parts to high alumina CERAMICS for demanding HIGH TEMPERATURE, HERMETIC applications.

CUSTOM HERMETIC CONNECTORS Multipin hermetic connectors for demanding vacuum and space applications requiring 400°C. bakeout — conditions where glass connectors won't stand up — are being produced in a variety of configurations. To save cost, Alberox can also provide connector sub-assemblies such as pin decks to be brazed or welded into shells or flanges by the customer.

MINIATURE TUBE AND PIN SEALS Many high temperature applications require insulated pin or tube feedthrus. These are available with weldable or brazeable metal parts, and can be added to covers or flanges, etc. All Alberox feedthrus are suitable for cryogenic environments.



Since 1961, we have designed and produced a wide variety of seals for custom applications in diverse components such as . . .

- VACUUM FEEDTHRU TERMINALS
- CERAMIC ELECTRON TUBE AND VACUUM SWITCH ENVELOPES
- NUCLEAR REACTOR PENETRATOR FEEDTHRU TERMINALS and INSULATORS
- SQUIBB and DETONATOR CONNECTORS
- POWER SEMICONDUCTOR HOUSINGS
- SPACE FLIGHT HERMETIC CONNECTORS
- JET ENGINE THERMOCOUPLE COMPONENTS
- HIGH PRESSURE OIL WELL LOGGING FEEDTHRUS
- CAPACITORS and TRANSFORMER TERMINALS

In addition to the above, Alberox has designed and produced state-of-the-art components for critical nuclear devices.

The Alberox plant was designed and built specifically for the efficient production of ceramic-to-metal seals. We manufacture our own A-950 high alumina ceramic, which enables us to optimize on the best metalizing process for this ceramic; thus we can provide superior seals. By making our own ceramic, our customers benefit by fast delivery on custom designs.

Another important feature of Alberox is that all of the plating requirements are met "in-house", including nickel, gold, copper, silver, bright tin and solder plating!

We have several types of BRAZING FURNACES for brazing ceramic-to-metal and metal-to-metal parts in HIGH VACUUM, or HYDROGEN, ARGON or any other specified atmosphere! The standard operating procedure is to custom program the brazing cycle, taking into account the ceramic, the types of metals, braze materials and the atmosphere.

Alberox exercises complete control, from the design stage right through all manufacturing operations — to meet or exceed the highest quality standards and maintain the fastest delivery in the industry. Products made by Alberox are assured to outperform all design parameters set for them!

HIGH PRESSURE FEEDTHRUS *Alberox A-950 Alumina* has extraordinarily high compressive strength (350,000 psi). By using this strength to its best advantage, ceramic-to-metal seals can be produced to withstand high static or dynamic pressures. Thousands of these seals have been manufactured by Alberox.

MULTITERMINAL FEEDTHRUS Multiterminal feedthrus differ from multipin connectors in that individual feedthru terminals are brazed or welded into a metal deck or flange. These feedthrus are generally used for higher voltage applications than can be accommodated by a regular ceramic pin deck or connector. Alberox has an extensive line of catalog tubular terminal bushings which are often used for the individual feedthrus. In this way, custom multiterminal feedthrus can be delivered quickly.

POWER FEEDTHRUS Copper, or just about any other type of metal, from ⅛ inch to over 1 inch in diameter can be provided in power feedthrus. Modifications of our standard catalog tubular and fluted terminal bushings are often perfectly suited, and custom ceramic-to-metal seal designs can be easily accommodated. Weldable or brazeable flanges also can be added to the feedthrus to allow easy installation on existing flanges or bulkheads.

INSULATORS AND STANDOFFS Insulators and standoffs can be supplied in tubular or fluted shapes, bare or glazed, with or without metal adapters or studs. Alberox manufactures plain ceramic parts for use as spacers, insulators, supports, isolators, decks, or washers. Metalized and glazed cylinders are also available for envelopes of high power electron tubes such as Thyratrons or for vacuum switches.

CATALOG HIGH VOLTAGE BUSHINGS Alberox stocks the largest variety of high voltage tubular and fluted high alumina terminal bushings in the industry. Modifications to these catalog items are easily made. Typical modifications are: special studs, brazed-in-center conductors, different metal parts, finishes and ceramic dimensional changes. Fast delivery at reasonable prices can still be maintained. Ask for Catalog #472 which illustrates details of these parts.

Alberox is ready to assist you with your ceramic-to-metal seal design requirements. When you need FAST DELIVERY of SUPERB ceramic-to-metal seals, at realistic prices — contact ALBEROX.

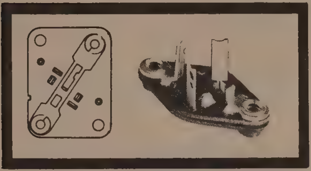
AMATOM ELECTRONIC HARDWARE

a Division of MITE Corporation
446 Blake Street · New Haven · Conn. 06515 · (203) 397-3311 · Telex: 96-3419

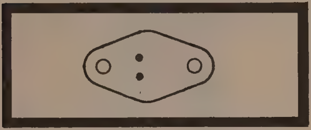
Manufacturer of Standard Hardware for the Electric and Electronic Industries

Largest Stock of "OFF THE SHELF" Items Available Anywhere



TRANSISTOR SOCKETS

Phenolic or Nylon sockets for TO-3 and TO-66 cases.

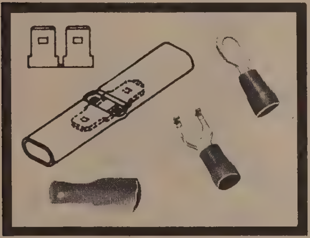


MICA INSULATORS

Precision stamped mica insulators for high electric strength, low dielectric loss, high surface and volume resistivities and excellent thermal stability. It is infusible and non-flammable.

CHASSIS FASTENERS

Available in Brass and Aluminum, 1/4 and 5/16 square. Threads: 4-40 and 6-32. For chassis from 1/32 through 1/4 thick.



SOLDERLESS TERMINALS

Pre-insulated spade and ring terminals for 22-18 and 16-14 wire sizes in various stud sizes. Fully insulated female quick connect terminals in .250 series for 14-16, 18-20 wire sizes and .187 series for 18-20 wire sizes. All insulation color coded for appropriate wire size. Also—Quick connect stationary male terminals; adaptors and fully insulated line connector.

INSERTS

Brass or Stainless Steel inserts designed to provide metal threads in plastic materials. Available as a standard part in two lengths. Also available to your drawing on special order. Threads: 2-56 through 3/8-24. Lengths: .219 through .812.

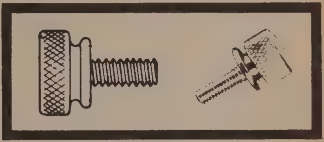
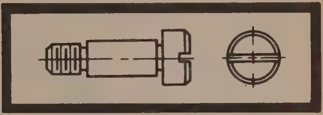
ADHESIVE BACKED POLYURETHANE BUMPERS

No costly screws, rivets or time-consuming mechanical fastener operation. Just "bump-it-on." High tack adhesive grabs immediately. Speeds assembly. Saves on labor costs.



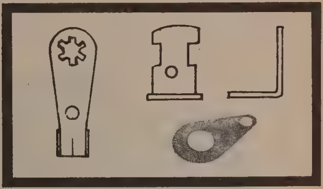
THUMB SCREWS

Available in Brass, Aluminum, Stainless Steel. Head diameters: 3/8 through 1/2. Threads: 6-32 through 1/4-20.



PRECISION SHOULDER SCREWS

Available in Brass, Aluminum, Stainless Steel. Barrel diameters: 1/8 through 1/4. Barrel lengths: 1/8 through 1-1/2. Threads: 4-40, 8-32, 10-32.



SOLDER LUGS

Wide variety of lugs, terminals, wire clips, brackets, jumpers etc.

ALLIED SYSTEMS CORPORATION

Patchboard Programming Systems

Allied Systems now offers two complete lines of patchcord programming systems, with more than twenty-one sizes available. Allied also supplies associated patch cords and hardware for both lines.

Catalog 567 covers IBM style systems which normally have a contact spacing of .250 X .281 or .281 X .281. These systems use larger taper pins for rear panel wiring.

Catalog 667 covers hook type systems which have a contact spacing of .250 X .250. These systems are available for taper pin, wire wrap or locking latch type rear panel wiring.

Patch cords are available in a variety of types: single conductor, coax, two conductor shielded, etc., to fit any programming requirement.

Thirteen sizes of *fixed* programming systems are available in both types of systems, ranging in size from 200 to 3264 contacts.

The extremely competitive pricing of the Allied Systems lines, plus the unexcelled quality of their products, gives you, the user, a competitive edge in the design and pricing of your system.

Call your nearest Allied Rep. or Home Office for application help in using Allied Systems patch panels and programming systems, or for prices.

DISTRIBUTION CENTER

Amphenol Sales Division maintains a unique Distribution Center

THE BIGGEST ELECTRONIC COMPONENT PARTS STORE IN THE WORLD

Gets our products to our customers the fastest way possible.

These are our manufacturing divisions and the products they produce to stock the store.

CONNECTOR DIVISION
2801 South 25th Avenue, Broadview, Illinois 60153
- Standard Cylindrical MIL-C-5015 type connectors
- Miniature Cylindrical Environmental Resistant connectors, Mil-C-83723/Mil-C-26482
- High Reliability Environmental Miniature Cylindrical connectors
- Miniature MS type connectors
- High Density Environmental connectors, Mil-C-81511
- Environmental Rack & Panel connectors, Mil-C-26518
- High Environmental Cable assemblies

CONTROLS OPERATION
120 South Main Street, Janesville, Wisconsin 53545
- Precision Potentiometers
- Turns Counting Dials
- Trimmers

R F Division
33 East Franklin Street, Danbury, Connecticut 06810
- Coaxial Connectors
- Standard U.G. connectors
- Miniature R F connectors
- Mil-C-39012 connectors
- Coaxial Switches

INDUSTRIAL DIVISION
1830 South 54th Avenue, Cicero, Illinois 60650
- Plugs & Sockets
- P.C. Connectors
- I.C. Sockets
- Sub miniature connectors
- Microphone connectors
- Telephone Bridging adapters
- Rack & Panel connectors
- AC Power Plugs
- Relay Sockets

CADRE DIVISION
20 Valley Street, Endicott, New York 13760
- Industrial Cable assemblies

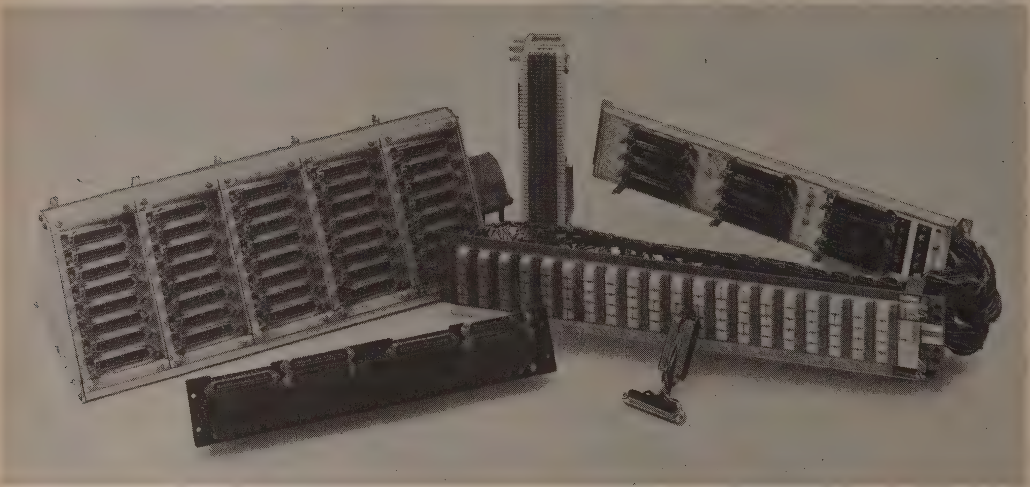
TELEPHONE SPECIAL PRODUCTS

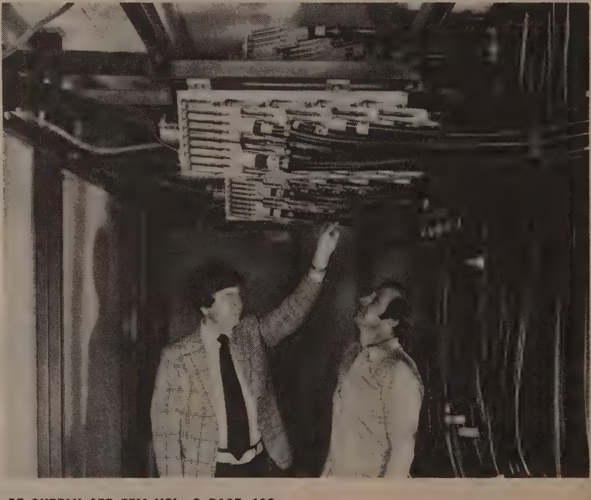
BUNKER RAMO AMPHENOL



Program board developed and manufactured by Sealectro Corporation, Inc., Mamaroneck, N.Y.

No matter what your interconnection requirements, Amphenol Cadre has the facilities and the technology available to help you meet your needs. For example, the Sealectro Corporation program panel shown above was custom-wired and connectorized by Cadre to meet the needs of one telephone company. The other field-proved components were either developed by Cadre and telephone company engineers, or they were Cadre-customized to meet specific installation requirements. Each is a custom solution to an interconnection problem as unique as your own. And each is economical and efficient.

If you represent a telephone operating or interconnecting company, or a telephone equipment manufacturer, call Cadre's technology to work for you. From a single component to an entire system, Cadre has the total capability to help you. Amphenol Cadre Division, Endicott, New York 13760. (607) 754-4444.



Rochester Telephone installation with Delta Splice Chambers mounted overhead. 25-pair ribbon connectors in triangular chamber mate with pre-terminated cables to replace time-consuming random splicing. Result: less congestion, quick connect-disconnect capability and substantial reductions in labor costs.

FOR LOCAL SOURCE OF SUPPLY SEE EEM VOL. 2 PAGE 462

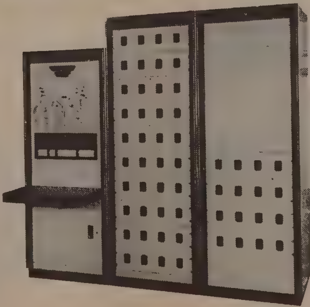
SEMI-AUTOMATIC WIRE-WRAPPING; AUTOMATIC TEST

BUNKER RAMO AMPHENOL

We can handle your complete back-panel wire-wrapping including all inventories right up to and including final inspection. You just have to bolt it in. And you can be sure of a completely tested, 100%-error-free back panel.

All your back panels can be tested with an Omnitester 900 Wiring Analyzer. This unit, pictured here in the center, has forward scan capabilities to determine, for example, whether a missing wire went to some other point. It then identifies that point.

The unit further tests for continuity resistance, insulation resistance, DC hipot, and features programmable dwell time.



All this at a price less than in-house fabrication. No costly inventories, no capital tied to costly equipment. You can furnish the back panels or we can supply our own.

Delivery? Just 2 to 8 weeks, depending on the job and material availability. And we have two locations: Longmont, Colorado or Endicott, New York. For more details just call your nearest Amphenol sales office or write us direct. Amphenol Cadre Division, Bunker Ramo Corporation, 20 Valley St., Endicott, N. Y. 13760.

INTERCONNECTION SYSTEMS

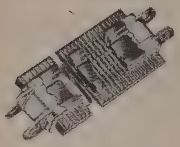
BUNKER RAMO AMPHENOL

Running Cables and Wired Products

Wired running cable assemblies offer the telephone industry the answer to one of its biggest operating questions: how to save time, effort, and money. Amphenol Cadre Division's wired running cables for key set installations are factory-wired.

With the plug-ended concept, the installer merely mates the Amphenol Micro-Ribbon®. connectors (or plugs) on either end of the cable with another running cable key set, bridging adaptor or additional system component connectors. It takes seconds, is elementary, and is low in cost.

The Micro-Ribbon Connector



More than 100 million Micro-Ribbon Amphenol 57 Series Connectors are in use today, without a single reported failure.

Unlike pin-and-socket connectors, the Micro-Ribbon contacts are self-cleaning; all foreign matter is dislodged during insertion. Greater contact continuity is assured. And the ribbon type is less expensive, too, with off-the-shelf availability.

The Cable

Amphenol Cadre running cable is constructed of solid, annealed, bare copper wire insulated with high-density, heat-stabilized, color-coded, semi-rigid polyvinyl chloride. To minimize crosstalk, individual conductors are twisted in color-coded pairs. Outer jacket consists of polyvinyl chloride or equivalent material, resistant to moisture, weathering, abrasion, corrosion, heat, and environmental cracking. A nylon ripcord inserted between jacket and conductors allows free stripping of jacket without damage to conductors.

Electrical Characteristics

Conductor Size	24 AWG.
Maximum Conductor resistance at 68F (ohms/M ft.)	27.5
Average Mutual capacitance at 1 kHz (mf/M ft.)	0.17
Minimum Insulation resistance (megohms/M ft.)	100

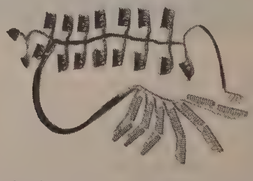
NOTE: The connector referred to in the table is Amphenol Part No. 57-10500-7, the plug is Amphenol Part No. 57-20500-14

Multi-Conductor Cables

Amphenol Cadre specializes in multi-conductor cables and is expert in every phase of production. Each cable must meet rigidly controlled quality standards at every stage of production. Just before shipment, each cable is again completely tested on custom-modified automatic inspection equipment.

Harness Assembly



Amphenol Cadre has years of experience in harness manufacturing. One result has been a large accumulation of harness know-how. Many customers come to Amphenol Cadre for redesign of point-to-point wiring in engineering prototypes; others for high volume production of complex harness systems.

When advanced programs require optimum-reliability intra-unit connections, many defense contractors turn to Amphenol Cadre for high environmental harness systems.

Electromechanical Assemblies

Amphenol Cadre can help keep you on schedule and your costs in line. Temporary plant overloads not only delay shipments but also tie up valuable time and material in process. Extended overtime and decreased efficiency rapidly begin to cut into profits. One way to avoid these problems and stay on schedule is by subcontracting the over-capacity production.

Amphenol Cadre's reaction time is such that we can quickly absorb short-term plant overloads usually at a price less than in-house cost.

Working closely with a customer's engineering laboratory, our production design people can competently turn engineering models into practical production realities.

Our design recommendations on chassis and printed circuit board layout, harness and cable configurations, molded plastic alternates for costly hardware, and connector and termination approaches have saved many manufacturers expensive trial and error prototype production and redesign.

Custom Molding

POLYSTYRENE • POLYPROPYLENE • POLYCARBONATES • ACETALS • POLY-VINYL-CHLORIDE • POLYETHELENE • NYLONS • ACRILONITRILE-BUTADIENE-STYRENE • Others

DECAPSULATION SERVICES

BUNKER RAMO AMPHENOL

The ACCESS™ Process for Safe, Selective Decapsulation

What is the ACCESS™ Process?

A service of Amphenol Cadre Division to selectively decapsulate or de-pot components such as molded cable assemblies, connectors, electronic modules, printed circuit boards.

Why Should the ACCESS Process be Used?

It saves money — typically 50% of new equipment cost — by salvaging potted components now being scrapped or expensively reworked.

When Should the ACCESS Process be Used?

When existing equipment needs modification, repair, or reworking to give it new life and usefulness.

What Kinds of Equipment Does the ACCESS Process Work On?

The ACCESS process effects economical recovery, repair, and re-use of encapsulated components for aircraft, aerospace interconnection systems, oceanographic equipment, automatic equipment, and sealed assemblies used in communications, data processing, medical electronics, and marine retrofit programs.

Who Performs the ACCESS Process?

Amphenol Cadre Division can conduct decapsulation in their Endicott, N.Y. or Longmont, Colorado facilities.

Will ACCESS Affect Reuse?

There is absolutely no residue left from the process that will affect remaining elements such as insulated wire, metal parts, connector parts, or plating.

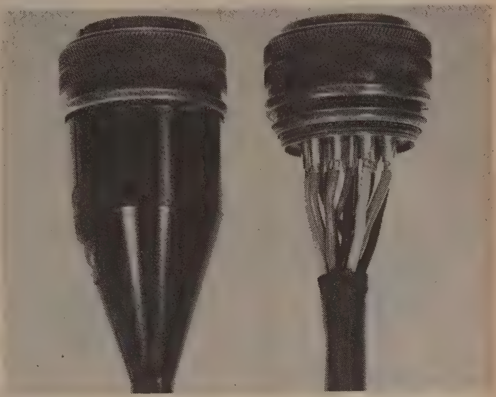
Will the ACCESS Process Remove Any Kind of Potting or Sealant?

The ACCESS process will selectively remove polyurethanes, polysulfides, silicone rubbers, butyl compounds, epoxies, foams, and room temperature vulcanizers, without damaging components.

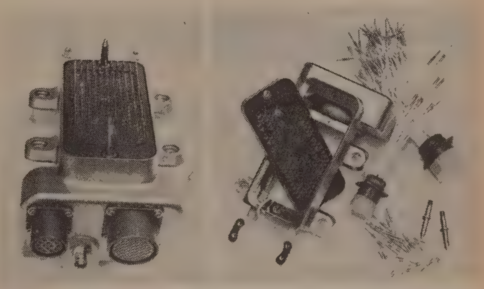
Where has the ACCESS Process been Used?

Here are some of the assemblies that Cadre and the ACCESS process have brought back to life.

In addition, Cadre has successfully used the ACCESS process on electrical penetration assemblies, miniaturized computers, missile filters, electronic sensors, relay racks, and many others.



This cable harness termination, potted in polyurethane, was decapsulated using the ACCESS process, with no damage to insulation, jacketing, inserts, metal parts or plating. In and out of Cadre's plant in 5 days, this connector's refurbishment saved its owner 60% of total replacement cost.



Here's a launcher umbilical assembly, potted with epoxy compound and filled with polyurethane. After the ACCESS process: a total recovery of components, and a saving of 40% of new component cost.

STANDARD CIRCULAR CONNECTORS

BUNKER RAMO AMPHENOL

97 SERIES CONNECTORS

- **PROVEN**
- **LOW COST**
- **RELIABLE**

ONLY AMPHENOL GIVES YOU . . .

FASTER, EASIER TERMINATIONS

Amphenol 97 Series connector contacts do not rotate within the insert. They're factory-aligned to uniformly position the solder cups for easy soldering. Why waste valuable assembly time positioning contacts? — Amphenol's exclusive non-rotating contact design simplifies soldering and lowers termination costs.

DEPENDABLE, LONG-LASTING TERMINATIONS

- Our blue diallyl-phthalate inserts provide high insulating resistance and dimensional stability in the presence of **both** high humidity and high temperature . . . performance unmatched by melamine or neoprene materials.
- Only Amphenol 97 Series inserts feature molded barriers between each contact. The barriers increase the surface distance between contacts, thus increasing the insert's voltage rating.
- For added strength, Amphenol pin inserts in sizes 20 and larger have additional dielectric thickness.
- Amphenol coupling rings are machined from solid bar stock. This exclusive feature provides extra strength.

A cure for the connector part number problem.

1 How many wires are you going to connect? What gauge?

These two questions are important, because they indicate which insert you need. There are literally hundreds to choose from.

The insert chart illustrates the 203 inserts with 43 inserts most often used are bracketed. Chances are the one you need is there.

Here's an example of how to use the chart. Say you want to connect eight 16-ga. wires. Just find the section of the chart marked 8 contacts. Insert number 20-7 is the one you want because it contains eight 16-ga. contacts and is one of the most often used. The one you choose might depend on your space or voltage requirements. The voltage capacity of each insert is listed under its diagram.

If you have more than one wire size to connect, the method is essentially the same. Actually, the insert configurations for multiple-size wires are a lot more flexible than they appear. That's because you can always solder a smaller wire to a larger contact. However, soldering a large wire to a small contact isn't recommended because of size and current requirements.

2 What if several identical connectors have different functions?

Here's a situation to watch out for. You have four identical receptacles on a panel. One carries high current loads. The others have low current functions. A plug mated with the wrong receptacle (cross-mating) could ruin your valuable equipment.

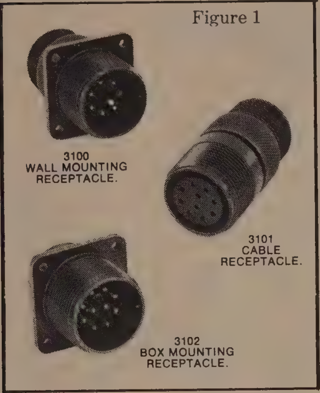
To avoid cross-mating, you can order identical inserts positioned in both the plugs and receptacles at various angles from standard. These variations from standard position are called Alternate Insert Positions.

STANDARD CIRCULAR CONNECTORS

BUNKER RAMO AMPHENOL

3 What kind of receptacle do you need?

Figure 1



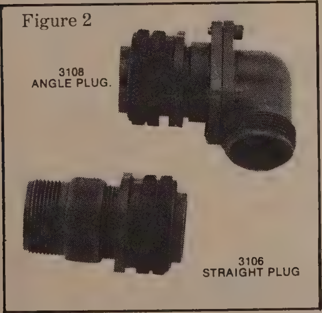
For wall mounting. Figure 1 shows a Wall Receptacle, type 3100. The elongated back of this receptacle extends through thick wall material. It is threaded to accept standard hardware fittings.

For unmounted applications. Use the Cable Receptacle, type 3101, shown in Figure 1.

For box or panel mounting. Use the Box Receptacle, type 3102. This receptacle's back is short to conserve space. It is not threaded on the back end and is used when no accessories such as clamps are needed.

4 What kind of plug do you need?

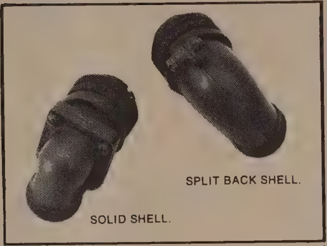
Figure 2



For ordinary situations. The Straight Plug, type 3106 (Figure 2), meets most connector requirements. However . . .

When space is critical. You may want to consider using an Angle Plug, type 3108. This type plug, shown in Figure 2, lets the cable enter your equipment at a right angle.

5 Do you need a plug with Solid or Split Back Shell?



You can get both straight and angle plugs in solid or split back shell designs. With the solid shell, you have greater strength. You save space, too. On the other hand, the split shell design lets you quickly inspect the solder terminals when you need to. This feature could be pretty important if you'll be subjecting the connector to rough handling and heavy use.

The type identification for solid shell construction is the letter A immediately after the main shell type number: i.e. 3106A or 3108A. Likewise, the type identification for split back shell construction is B: i.e. 3106B or 3108B. Because of application, receptacles are made in solid back shell construction only. Their type identification is 3100A, 3101A and 3102A.

6 Which connector gets the socket? The receptacle or the plug?

You're at the point where you designate which inserts are used with which shells. Since either pin or socket inserts can be used with plugs or receptacles, now's the time to make your choice.

Here's a good rule of thumb. Order the sockets for the connector at the "hot" side of the circuit. By having sockets at the power source, there's little chance that a wayward finger or screwdriver will short the circuit or cause personal injury.

The code for Sockets is simply S following the insert code number. For Pins, it is P. Therefore, 20-7P insert would have pin contacts while a 20-7S insert would have socket contacts.

7 Do you need a non-reflective finish or a shiny finish?

If you prefer the standard dull-olive cadmium plate finish, which is non-reflective, then no suffix number is needed. If you would rather have the shiny, clear cadmium plate finish, just add the suffix (639) at the end of your part number.

Both finishes give you the same high conductivity and resistance to corrosion.

HOW TO ASSEMBLE MS CONNECTOR PART NUMBERS

MS 3101 A 28-21 S Y (639)

SERIES NUMBER
MS — Military Standard for A, B, E, F & R construction
97 — Like MS, but AMPHENOL exclusive design for A & B construction

SHELL TYPE
3100 Wall Receptacle
3101 Cable Receptacle
3102 Box Receptacle
3106 Straight Plug
3107 Quick Disconnect Plug
3108 Angle Plug

SHELL CONSTRUCTION
A — Solid
B — Split

INSERT NUMBER
Consists of

SHELL SIZE
8S, 10SL, 12S, 12*, 14S, 14*, 16S, 16, 18, 20, 22, 24, 28, 32, 36, 40*, (Size is "A" thread in 16ths)

CONFIGURATION
Code numbers (from 1 up) for insert configuration
Note: Code numbers are specific for each shell size. The same code number represents different configurations in different shell sizes.

CONTACT
P — Pin
S — Socket

ALTERNATE INSERT POSITION
Omit for standard position
W, X, Y, or for alternate positions, depending on insert

SHELL FINISH
Omit for standard finish
(604) Anodized with bichromate seal
(608) Black anodized
(639) Clear cadmium plate

CAP AND CHAIN ASSEMBLIES

Ordering Information and Dimensions

Fit 97 type receptacles and plugs. Provide protection against live circuits and keep out dirt and dust when connector is not in use.

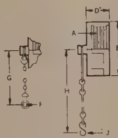
Two styles are available: the MS type with a stainless steel link chain, and the Amphenol standard type with a beaded chain. Both use the same caps and both have a cadmium olive drab finish.

FOR RECEPTACLES

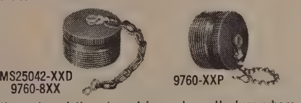
MS25043-XXD
9760-9XX

9760-XX

Has internal threads and is used on all receptacles (MS3102, MS3101 and MS3100). A soft rubber disc seats on the connector shell forming a watertight joint.



FOR PLUGS



MS25042-XXD
9760-8XX

9760-XXP

Has external threads and is used on all plugs where a coupling nut is provided (MS3106 and MS3108).

* B dimension 1/16" less and D dimension 1/64" less for screw machine parts.

† Caps less chains are available. To order, add G to the part number; for example, 9760-8G.

‡ Complete the MS part number by substituting the shell size for XX. For example, to get a MS type cap for a size 10 receptacle, order MS25043-10D.

97 CONNECTOR ACCESSORIES

Protective Caps for MS Connectors — 97121

MS90376 Expendable polyethylene dust caps provide added protection for precision-built MS connectors during storage and handling, in assembling with other equipment, and after complete assembly into a finished apparatus. Protective caps cover threaded sections of plugs and receptacles; assure against damage to thread from any cause; permit low-cost, attractive coverings which protect contacts and the insulation from dust, dirt and handling damage.

Type 97121-4XXY—For engagement with internal threads of coupling rings.

Type 97121-4XXR—For engagement with external threads; for coupling and fitting threads

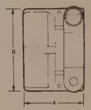
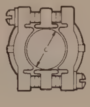
97 Connector Accessories

Cable Clamp

For jacketed cable or wires protected by tubing. On MS3057A Cable Clamp, both clamping halves float, so that cable is always centered, affording maximum strain relief. With unjacketed cable or wire bundles without tubing, use corresponding MS3420 bushing. To order clamp with bushing, add -1 to the Amphenol part number. With shell sizes 16 and larger, two telescoping bushings are furnished.





MS Number	Amphenol Number	Shell Size	Max. O.D. Cable	Dimensions — Inches A	B	C	Threads

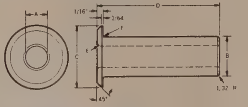
Bushing

Rubber bushing specifically designed for MS3057A Cable Clamp. Protects wire bundles and unjacketed cables from possible damage by cable clamp. Can also be used as reducing bushing.



Part Number MS	Part Number Amphenol	Dimensions — Inches A Dia.	B Dia.	C Dia.	D	E Rad	F Rad

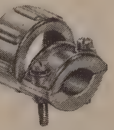
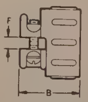
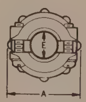
Cable Clamp

For jacketed cable or wires protected by tubing. To provide for the most firm grip, the cable or wires should be centered in the jaws of the clamp. A vinyl or rubber bushing or sleeve may be used for this purpose. In applications where the cable is subject to considerable flexing, the resilient sleeve should project for several inches along the wire. This reinforcement lengthens the life of the cable. For centering and sealing, one resilient washer and two fiber washers are included with each clamp.







AN Number	Fits Shell Size	Fits AN Fitting Size	Max. O.D. Cable	Dimensions — Inches A	B	E	F	Threads	Weight Lbs. per 100

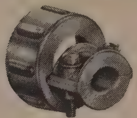
† Clamps for connectors size 12 are the same as for sizes 10SL and 12S.

Step Down Cable Clamp — 97-3057



Like the AN3057 except for the step down feature that accommodates smaller cable than that for which AN3057 was designed.

Amphenol Number	Fits Shell Size	Fits AN Fitting Size	Max. O.D. Cable	Dimensions — Inches A	B	E	F	Threads	Weight Lbs. per 100
97-3057-10-6	18	10	1/2	1 3/16	1 1/8	7/16	3/16	1 -20	3.94
97-3057-12-6	20, 22	12	1/2	1 3/8	1 3/16	7/16	3/16	1 3/16-18	4.40

NOTE: The selection of fittings for connection to MS connectors is based on the connector size AND the cable or conduit size. For other connections, such as terminations and couplings, fitting sizes correspond to the size of the cable or conduit used.

Waterproof Cable Clamps

The complete waterproof cable clamp assembly No. 9767 (for use with MS connectors) consists of an AN3057 Cable Clamp, a rubber bushing, washer and an AN3055 Adapter. It is available for all sizes MS and 97 plugs. The sectional view of Amphenol 9767 Waterproof Cable Clamp shows the parts of the clamp.

To assure the watertight integrity of this clamp when assembled to an MS plug, the plug must be ordered with deviation (417) which supplies a W washer cemented to the shoulder of the plug shell.

For AN Fittings

When selecting a cable clamp for a connection with fittings, the 9767 Waterproof Cable Clamp without the adapter may be used. AN fittings have the required inside tapered surface for seating the special rubber bushing.

97 Series — Special Purpose Connectors

Box Type Plugs — (97-5105 Construction)

Square flange for mounting directly on box or housing. Provides a means of directly connecting two pieces of equipment without interconnecting wires. Available in all sizes with either male or female inserts. To order, complete the part number (97-5105) by adding the proper insert number. (See other pages for insert information.) Example: 97-510528-20S. To prevent connectors from rotating, order deviation 205 (a single stake, with swivel ring pinned) or 206 (double staking, with both swivel plate and swivel ring pinned); for example: 97-510528-20S(205) or 97-510528-20S(206).

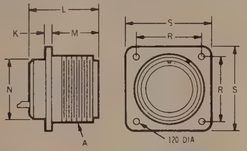
Small Flange Receptacles — (115 Construction)

Receptacles are available in sizes 12S and 14S with pin or socket inserts and in size 10SL with pin contacts only. To order, complete part number (97-3102) by adding proper insert and construction number (115).



Connector Size	Coupling Threads A	Dimensions — Inches

Junction Shells — 9784

These junction shells may be used as panel terminations to hold cable harnesses when not in use or as right-angle feed-throughs similar to the AN3064. Adding the AN3057 cable clamps provides strain relief.

MIL-C-5015 Performance, MS Contacts Plus "Poke-Home" Speed and Reliability

Amphenol 246 Series connectors simplify and speed wiring changes by providing the combination of rear insertable, front removable, crimp Poke-Home contacts. The MS90453 pin contact and MS90454 socket contact were recently standardized and will be included in proposed procurement Specification MIL-C-23216. They can be crimped with the standard MS tool, M22520/1-01, Amphenol No. 294-542 with turret head M22520/1-02, Amphenol No. 294-1889-XX.

Damage-Resistance Contact Retention System

Metal retaining clips combine with a shrouded retention disk to prevent damage to the contact system. The metal retaining clips, identical in both male and female insert assemblies, can be removed and replaced in the field. They are shrouded to minimize damage by untrained personnel. Forces as high as 50 pounds with the removal tool cocked at angles of 10° can be applied without damaging the clip. At angles of more than 10°, the tip of the tool rides out the retention disk. In addition, the shrouded contact retention prevents excessive skewing of contacts that might prevent proper connector mating.

Contact retention force exceeds the requirements of MIL-C-26482 and MIL-C-26500. The forces required for contact insertion and removal are kept down to a low level for ease in servicing.

Interchangeable Contacts

The 246 Series uses the contacts recently standardized by proposed specification MIL-C-39029. This specification, which covers the contacts for all crimp Poke-Home MIL-C-5015 connectors, eliminates the long and short versions of the contacts. Instead, it provides one standard length contact to be used in both standard length and short-shell connectors. This enables both the 16S-1 and the 18-1 shells, for example, to use the same contact.

The 246 Series connectors are interchangeable and intermateable with all other MIL-C-5015 connectors. They meet or exceed all the requirements of MIL-C-5015.

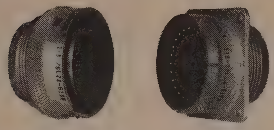
BUNKER RAMO AMPHENOL

MERLIN I Rear Release 118 Series Connectors

Qualified to MIL-C-83723 & MIL-C-26482



Advanced State of the Art

Amphenol's MERLIN I is a rear-release, polymer retention, upgraded version of MIL-C-83723/0026482 connector representing a true advance in rear release design. Amphenol design has improved the quality while reducing the weight and offering the greater dielectric spacing by the elimination of metal contact retention clips. These 118 Series connectors are qualified to MIL-C-83723 and MIL-C-0026482.

Retention System

Merlin I connectors utilize an all polymer retention disc with integrally molded polymer contact retention clips. This design results in lower cost and higher integrity in that the metal clip system requires close dimensional control of twice as many dimensions as does the comparable all dielectric system.

New Materials

Amphenol has had extensive experience with Astrel P360*. It has been used successfully in the Astro 348® Series (MIL-C-81511C) and now upgraded for individual contact retention and release. This thermoplastic polymer possesses outstanding mechanical and electrical properties and is resistant to alkalis, acids, fuels and solvents.

Military/Industrial Specifications

The Merlin I connectors are the first of its kind to meet and exceed performance requirements of all three of the following standard specifications:

NAVY — MIL-C-0026482 (175° Class L fluid resistant)
MIL-C-0026482 (200° Class E)
AIR FORCE — MIL-C-83723A (200°C Class R fluid resistant)
AERONAUTICS INDUSTRIES ASSOCIATION — NAS 1599

Typical Applications

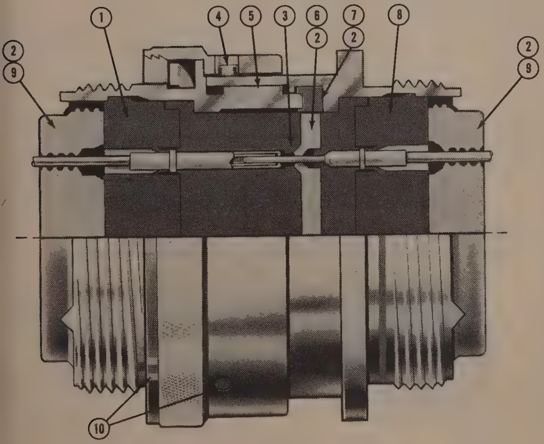
- Process control systems or oil industry where fluid resistance is essential.
- Paving equipment where constant temperatures of 200°C are reached.
- Portable communications equipment or traffic control where weight and size are major factors.
- Ideal to upgrade MIL-C-26482E installations, through retrofit and replacement.
- Ground support equipment where cylindrical connector applications are required .
- Marine equipment where cylindrical connector applications are required.

User Benefits

- **7/16″ shorter, up to 40% lighter for total system weight reduction and lower cost per pound.**
- **62% increased dielectric separation reduces outgassing and weight loss improving connector temperature life.**
- **Reduced number of connector parts, up to 122, decreases failure modes while increasing reliability.**
- **Resistant to fuels, oils and cleaning solutions for longer life.**
- **Mis-mating due to bent pins eliminated by hard front closed entry socket insert with a hooded two-tinned, prod-proof socket contact.**
- **Intermateable and intermountable with existing circuitry reducing replacement and upgrading costs.**

* Registered Trademark of 3M Co.
® Registered Trademark of Bunker Ramo Corp.

DESIGN FEATURES



1 **Molded One-Piece Polymer Contact Retention Disc** — Fewer connector parts — Greater reliability
2 **Fluorosilicone Fluid Resistant Seal Material** — Allows one connector to meet stringent fluid requirements of various specifications
3 **Closed Entry Socket Insert and Contacts** — Eliminates mis-mating due to bent pins — System reliability
4 **Bayonet Coupling System** — Quick mating of connectors — Lowers operating costs
5 **5 Key Shell Polarization** — Assures positive contact alignment prior to mating
6 **Interfacial Mating Seal** — Maintains system integrity
7 **Static Peripheral Shell Seal** — Maintains system integrity
8 **Monoblock Construction — Inserts Bonded to Shells** — Helps to assure complete connector reliability
9 **Self-Sealing Rear Grommets** — Assures environmental sealing with or without rear hardware
10 **Visual Mating Indicators** — Quick indication that connector is fully mated
11 **Shell to Shell Grounding Fingers***
12 **7/16″ shorter, 40% lighter weight**
13 **Accepts standard NAS 1599, MIL-C-0026482, and MIL-C-83723 Hardware**
14 **Durable Conductive Shell Finish**

* Consult factory

How to Order

Military Standard Part Number for MIL-C-83723 Connectors

MIL-C-83723, Revision B connectors can be ordered by the Military part numbers. The connector part number is per the following example:

M83723—02 R 22 55 N

Specification Number

Shell and Contact Style
01 — Narrow Square Flange with socket contacts
02 — Narrow Square Flange with pin contacts
05 — Single Hole Mount with socket contacts
06 — Single Hole Mount with pin contacts
07 — Cable Receptacle with socket contacts
08 — Cable Receptacle with pin contacts
13 — Straight Plug with socket contacts
14 — Straight Plug with pin contacts

Connector Class
R — Fluid Resistant 200°C, conductive finish

Shell Size
10 12 14 16 18 20 22 24

Insert Arrangement
See above

Alternate Insert Position
N, W, X, Y, Z
As per table above

Military Standard Part Number for MIL-C-26482 Connectors

MIL-C-26482 connectors can be ordered by the Military part numbers. The connector part number is per the following example:

MS3470—L 22 55 P N

Specification Number
MS3470 — Receptacle, narrow flange mount
MS3471 — Receptacle, cable connecting
MS3474 — Receptacle, rear mounting jam nut
MS3476 — Plug, straight

Connector Class
L — Fluid Resistant, 175°C, conductive finish
E* — Non-fluid resistant, 200°C, conductive finish

Shell Size
10 12 14 16 18 20 22 24

Insert Arrangement
See above

Contact Type*
P — Pin Contact
S — Socket Contact
*For non-power contact applications substitute "A" for "P" and "B" for "S"

Alternate Insert Position
N, W, X, Y, Z
As per table above

* Amphenol Class E Connector is Fluid Resistant

Part Numbers Merlin 118 Connectors

To order the specific Merlin 118 connectors you want, the connector part number is per the following example:

118—10 R 22—55 P N

Series Designation

Military Specification
1 — MIL-C-83723
2 — MIL-C-26482

Shell Style
0 — Square Flange Receptacle
1 — Cable Connecting Receptacle
3 — Single Hole Mounting Receptacle
6 — Straight Plug

Connector Class
R — Fluid Resistant, 200°C, conductive finish (MIL-C-83723)
L — Fluid Resistant, 175°C, conductive finish (MIL-C-26482)
E — Fluid Resistant, 200°C, conductive finish (MIL-C-26482)

Shell Size
10 12 14 16 18 20 22 24

Q. SELF-SEALING, THREE-RISER REAR GROMMET

SIGNIFICANT ADVANCE IN STATE-OF-THE-ART

On the ground or in space, wherever there is a requirement for superior environmental protection, high reliability, and minimum weight and bulk, 48 Series miniature environment-resistant connectors are the answer.

In developing this series, Amphenol faced the problem of satisfying reliability, logistics, and present and anticipated environmental requirements for connector usage. To solve the problem, Amphenol had to generate advanced design concepts, formulate materials specifically for connector usage, and work out new production techniques. The resulting connectors exceed the stringent requirements of MIL-C-26500(USAF) and MIL-C-38300(USAF) for performance and reliability.

FULL PERFORMANCE IN EXTREME ENVIRONMENTS

Advance materials technology and complete environmental sealing enable these remarkable connectors to:

- Operate continuously at 200°C (392°F)
- Withstand thermal shock cycling from −55°C (−67°F) to 260°C (500°F)
- Support 1500V RMS from sea level to 350,000 ft., mated
- Maintain environmental and electrical integrity during and after 0 to 2000 CPS vibration during exposure to 200°C (392°F) and −55°C (−67°F)
- Withstand physical shock of 100 gravity units
- Resist corrosion, ozone, sand and dust

ULTRA-MATE® CLOSED ENTRY AND FRONT SERVICING

Ultra-Mate connectors are identical to the other connectors in the 48 Series, but the socket inserts have a hard face of glass-filled epoxy. They are the first to combine the positive reliability of closed entry with the speed and convenience of front servicing. In addition, the MIL-C-26636 contacts are tamper proof. Wrong-size contacts or oversize test prods cannot be inserted in the hard dielectric contact entryways on the socket inserts.

COMPLETE ENVIRONMENTAL SEALING

48 Series connectors are fully sealed against extreme environmental conditions.

Amphenol-developed, silicone rubber dielectric provides resilience and unsurpassed resistance to tear, compression set, fluids and high temperatures.

When the connectors are mated, insert faces compress to form a resilient dielectric seal around each individual contact. A continuous barrier on the periphery of the socket insert mates with a recess around the pin insert to form an additional compression seal. A dynamic "O" ring seal between mated shells constitutes still another barrier to dirt and moisture, and protects the integrity of the face seals. Together with monoblock construction, this puts void-free, continuous dielectric around each contact through the entire connector length.

Monoblock construction, with bonded interfaces between the dielectric components (insert, anti-deflection disc, and grommet) eliminates air voids and protects connectors from degrading moisture and altitude conditions. A pressurizing seal around each contact at the major O.D. prevents the passage of air or moisture through the contact hole, and triple sealing riser design at each wire hole in the grommet seals each individual wire.

GO/NO-GO RELIABILITY

When an Ultra-Mate connector is mated, you can be sure there is proper contact. The socket contacts are closely surrounded by hard dielectric with a chamfered entry to guide in the pins accurately. However, if the pins are bent, the hard dielectric presents a closed entry and prevents mating.

LIGHT WEIGHT AND HIGH CONTACT DENSITY

Connector shells are impact-extruded aluminum forgings with a high strength-to-weight ratio. The insert arrangement is designed for the maximum number of contacts within the area available.

POKE-HOME® CONTACTS

Poke-home contacts (front release, rear insertable) provide for easy servicing of connector circuits without disassembling the connector from its mounting, or disturbing adjacent contacts. MIL-C-26636 contacts are crimped quickly, consistently, and reliably with either hand or power tools. They have high electrical conductivity, present a smooth configuration, and completely protect electrical contact pressure-members from environmental and handling damage. The contacts come in sizes 20, 16, 12 and shielded, with rhodium-over-silver plating. Other platings such as gold are available; write factory for details.)

* Specify whether solder pocket or eyelet contact tail is desired.
** E = Eyelet Contact C = Solder Pocket Contact

Hermetically sealed receptacles in the 48 Series have a leakage rate of less than .01 micron cubic foot of helium per hour with one atmosphere differential. To simplify contact identification, Amphenol puts contact spiral markings on the glass dielectric as well as on the face seal. It uses its exclusive identoseal process to mark the glass.

The receptacles are available with either threaded or bayonet coupling in either of two shell styles: solder flange or single hole hex nut mounting shells. They take most of the 48 Series pin inserts shown on these pages. The part numbers to use in ordering are shown in the table on the following page.

The shells are non-magnetic stainless steel. The contacts are made of 52 alloy and are rhodium plated, flattened and pierced. Solder cups are furnished when you order deviation (108).

Amphenol 48 Series Hermetics are built to the specifications of MIL-C-26500.

The temperature and electrical capabilities correspond directly to the 48 Series Resilient Connector.

HERMETICALLY SEALED RECEPTACLES

Hermetically sealed, feed-through connector.
Has two #16 pin contacts, one shielded pin contact.
Has bayonet coupling, mates with 48-16R14-3S or 48-16R14-2/1S.
Offers all features of MIL-C-26500B (USAF), including continuous operation at 200°C; interfacial insert seal, insert rim seal, and dynamic O ring between shells; visual full engagement indicators for mating; and five polarizing keys in alternate positions to prevent mismating.

See Table of available inserts

¶Hermetics are available in receptacle shell style "X3" (MS24265) and "X5" (MS27034).

*The 48 Series part numbers for Ultra-Mate connectors (MIL-C-38300) are 48-XXCXX-XXSX and 48-XXRXX-XXPX(145). MIL-C-38300 connectors are furnished without cable clamp. If a cable support is desired, it must be ordered separately.

†Marked with MS part number per MIL-C-26500C.

Military Standard Part Numbers

You can use MS as well as Amphenol part numbers in ordering 48 Series connectors. The MS part numbers for MIL-C-26500 connectors are worked out on the basis shown in the table below. Please take special note that MIL-C-26500D Revision has eliminated the cable support from the callout. Amphenol allows 48 Series connectors to be ordered by either MIL-C-26500 Rev C or Rev. D in order to alleviate the many logistic problems that were created by Revision D. To eliminate delays please specify to what MIL-C-26500 revision level the connectors are being ordered.

The part numbers for MIL-C-38300 connectors start off with the identification M38300/ and take the form M38300/XXX-XXX. To determine the specific M numbers, refer to military specification MIL-C-38300.

Part numbers, both Amphenol and Military Standard, for the contacts and assembly tools are listed below.

¶Hermetics are available in receptacle shell style (MS24265) and (MS27034).

†Contact nearest Amphenol sales office for availability.

Poke-Home Contacts and Tool Applications

CONTACTS — When you order 48 Series connectors with contacts, the contact package contains enough contacts to complete the insert arrangement and have at least 2 spares left. The package also includes enough sealing plugs for at least 15% of the contacts in the insert, in any case a minimum of 3 sealing plugs. To provide proper sealing, insert unwired contacts and sealing plugs in all unused holes. (Use a #12 contact for a #1 shielded hole.) To order contacts and sealing plugs separately use the part numbers in the table below. Contacts may also be ordered in reels for use with automatic crimping tools.

TOOLS — Note that various tools are available for crimping, inserting, and removing each size contact.

Contact Size	Wire Size AWG	Max. Current Rating Amps.	AMPHENOL Part No.		MS Part No.		Crimping Tool	Bushing (Positioner)	Crimp Jaw Setting Dia. (Insp.)	Insertion Tool	Removal Tool

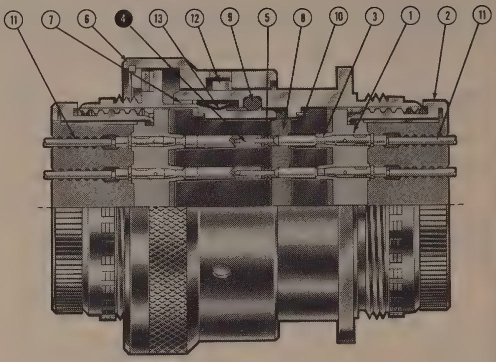
SERIES 2



Series 2 Construction

1 Molded One-Piece Contact Retention Disc.
2 Captivated Rear-Locking Nut (Metal to Metal Bottoming).
3 Individual Contact Risers.
4 Anti-Scoop Recessed Pin Contacts (in receptacle).
5 Closed Entry Socket Insert and Contacts.
6 Captivated Triple Bayonet Coupling System.
7 5 Key Shell Polarization. (Series 2 size 8 has 2 keys.)
8 Interfacial Mating Seal.
9 Dynamic "O" Ring Peripheral Shell Ring.
10 Monoblock Construction — Inserts Bonded to Shells.
11 Self-Sealing Rear Grommets.
12 Visual Mating Indicator.
13 Shell to Shell Grounding Fingers.
14 Anti-Scoop Recessed Pin Contacts (in Plug and Receptacle).
15 Connectors will accommodate ⅛" (.375 to .500) variation in gap between mounting surfaces.
16 Connectors will accommodate radial misalignment of up to .031 — (.062 total float).
17 Conical float spring maintains interfacial seal.
18 2 Key Shell polarization.

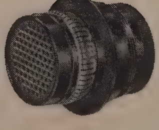
GROUNDING FINGERS

SERIES 2

SERIES 1



Shell-to-shell grounding is established by beryllium spring fingers permanently fixed to the Series 2 receptacle shell and permanently fixed to the Series 1 plug shell. These spring fingers, spaced at a minimum of 6 per inch (except at key-ways in Series 2 construction), make contact at least .090 inch before pin-socket electrical engagement occurs during mating and maintain contact at least .090 inch after pin-socket disengagement during unmating.

1/ All contacts may be assembled with either minimum or maximum diameter wire as shown or in any combination thereof. When using groupings of oversize wire, they shall be randomly distributed.

2/ 50 percent of the contacts in a given insert arrangement may be assembled with oversize wire up to and including the maximum diameter shown; however, the remaining 50 percent shall not exceed the nominal finished wire diameter nor shall they be less than the minimum finished wire diameters.

3/ Wire numbers are for reference only and are not intended to restrict the use of acceptable wire-types with these connectors.

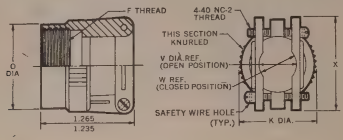
* Cables shown are typical for that contact pin. Consult factory for contact section if your cable requirements are not shown.

ASTRO/348 HARDWARE ACCESSORIES

STRAIGHT CABLE CLAMPS

Dimensions in inches.
Dimensions are the same for Series 1 and Series 2 Connectors.
Cable clamp usage is recommended to prevent excessive strain from being applied to the wire terminations.



Notes: 1. Dimensions are after plating.

Support cable or wire at the connector and prevent twisting, pulling and strain on the wire terminations.

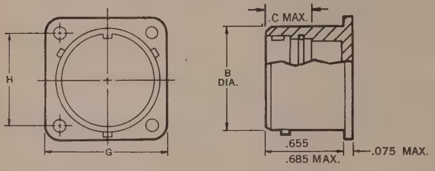
Dimensions in inches.

Note: Series 1 = Long Design



Notes: 1. Dimensions are after plating.
2. Dummy Receptacles are aluminum with finish noted.

Anchor disconnected plugs and prevent damage or accumulation of dirt on face of plugs.

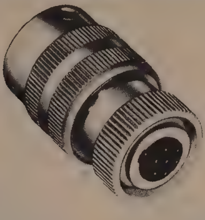
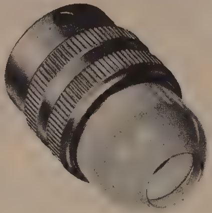
67 Series MinniE® Environment Resistant Connectors

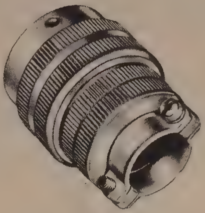
Miniature, Quick-Disconnect, Bayonet-Lock Connectors



E
With unitized grommet for individual use seal



P
Includes potting mold



C
Vise action with two screw strain relief

Environmentally Sealed

- Choice of unitized back end grommet or provision for potting. Both exceed moisture resistance requirements of MIL-C-5015.
- Face seal gasket has individual barriers to isolate each contact.
- No derating for altitude is required up to 70,000 feet if the sealed connectors are mated.
- Sealed connectors take 1500 V RMS at 70,000 feet.
- Vibration resistance per Method 204, MIL-STD-202A is 10 to 2,000 cps at 20 G's.
- Temperature cycling range per MIL-C-5015 is −67°F to
- +257°F.

Lightweight and Convenient

- Flattened incline angle of bayonet slots makes mating easier.
- Clamp and grommet combine to form a unitized seal for ease of assembly and maintenance.
- Connectors convert easily from E style to P style and vice versa.
- Yellow ring on receptacle shell gives visual indication of connector engagement.
- Weight is about half that of standard connectors with same number of contacts.
- Eighteen different insert configurations are available.
- Alternate insert positions are available.

Efficient and Long-Lasting

- Spring-loaded coupling ring provides positive locking action in bayonet slot and a constant compensating force to counteract compression set of resilient face seal.
- Stainless steel bayonet slots and pins reduce wear and friction. Three-pin bayonet coupling minimizes rocking action of the mated plug and receptacle.
- Hooded female contacts resist test prod damage.
- Hard insert dielectric and resilient face seal on pin inserts positively retain contacts so there is no possibility of their being pushed out of the insert.

Hermetically Sealed

Hermetically sealed 67 Series connectors are available in two shell styles — hex nut mounted receptacles. Each shell style is available in 11 different insert configurations with up to 48 contacts.

165 Series Miniature MS-Type Connectors

COMPACT AND CONVENIENT

Connectors in the 165 Series are only about one-third the size and weight of standard MS connectors with the same number of contacts.

Bayonet coupling provides quick disconnect.

WIDELY APPLICABLE

Eight different insert configurations and five different shell styles in two sizes — large and small — provide enough variations for a wide range of applications.

Plugs and cable receptacles are available with either a built-in cable clamp to provide positive strain relief or with provision for potting. On all connectors, alternate insert positions are available for gang mounting.

WEATHERPROOF AND PRESSURE PROOF

When mated, 165 Series connectors are pressure proof and completely waterproof. The connectors using female inserts feature a sandwich construction with the insert spun into a cartridge; the connectors are factory sealed to prevent leakage. O-ring seals are used in both plugs and receptacles. They meet the exacting pressure seal requirements of MIL-C-5015, Class C construction.

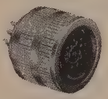
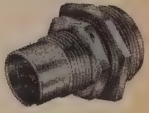
Connectors with Shielded Contact and Ground Shield

- Important in aircraft and instrumentation applications, for example, fuel gaging.
- Shield continuity was recently upgraded by additon of heat treated beryllium copper finger pressure members to the socket shield.
- Available in a number of shell styles, including potting construction plug and cable receptacle, plugs with spring-loaded coupling ring, and square flange receptacle.
- Available also in combination of environmentally sealed and cable clamp construction.
- Two different insert configurations

  Eight #20 contacts,
  1 shielded contact

  Nineteen #20 contacts,
  1 shielded contact

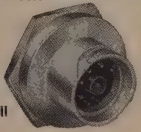




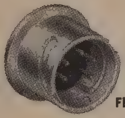
---

182 Series Hermetic Miniature MS-Type Connectors

Mate With 165 Series



Type 2 Threaded Back Shell



Type 1 Solder Flange Shell

HIGHLY RELIABLE

The 182 Series features a rugged compression seal which is extremely strong and highly resistant to thermal shock; it also has very high insulation resistance. To assure strictest adherence to requirements, 182 Series receptacles are tested by mass spectrometer at the maximum sensitivity of the instrument.

WIDELY APPLICABLE

Like 165 Series connectors, 182 Series receptacles come in two sizes — large and small — and are available in most 165 Series insert configurations. There are two shell styles — Type I, Solder Flange, and Type II, Threaded Back Shell, with and without O ring. There are two types of contacts available: solder pocket, and flat and pierced. Alternate insert positions (shown at right) allow for gang mounting.

MULTI-PURPOSE SUBMINIATURE CONNECTORS

BUNKER RAMO AMPHENOL

115 SERIES

In transducers, pressure switches, vibration monitors, accelerometers, constant speed drives . . . in aerospace, oceanographic, or medical instrumentation . . . wherever lightweight, rugged, high-reliability connectors are needed to withstand very high temperatures, severe vibration and corrosion, 115 Series subminiatures are the connectors to consider.

Tiny and Tough Standard Version

Designed to stand up under grueling conditions, 115 Series 2 Contact connectors are subminiature in size but "big" in performance. Most of the connectors in this series weigh less than ½ ounce and, when mated, are less than 1¼ inch long. Yet their current rating is 7.5 amps and their voltage rating is 1500V (RMS). In the standard version, some of the connectors have an operating range of −54°C (−65°F) to 204°C (400°F).

Fuel-resistant Viton "B" face seals, flame-retardant diallyl isophthalate inserts, and corrosion-resistant rhodium over silver plated contacts enable these connectors to work well even under adverse conditions.

When waterproofing is necessary, any of the 115 Series subminiature connectors can be potted.

Pin contacts are molded in, and socket contacts are held in place with "C" washers. The inserts are held in the shells by spinning and/or bonding. Alternate insert positions are available.

The 115-5050 plug features a foolproof coupling ring locking mechanism that keeps the connector fully mated even under extreme vibration. It also features contacts which can be quickly crimped with the MS3191 tool, Amphenol No. 294-1166 with special positioners. Insertion and removal tools are not needed for the contacts.

1000°F High-Temperature Version

In addition to the many advantages offered by the standard version, the 115 Series high-temperature version provides for exceptionally high ranges of temperature. With stainless steel shells, contacts and hardware and with inserts of Amphenol ceramic, 115 Series high-temperature plugs serve excellently in temperatures up to 1000°F (538°C) or more.

SPECIFICATIONS

STANDARD VERSION

Shell	Nickel Plated Brass.
Contacts	Brass, rhodium over silverplate. Solder cups to take #20 AWG wire, except on 115-5050 plug which has crimped contacts which accept #18 wire.
Inserts	Diallyl isophthalate.
Face Seal	Viton "B", 65 durometer, on receptacles.
Current Rating	7.5 Amps.
Voltage Rating	1500V (RMS).
Insulation Resistance	5000 Megohms (min.) when tested as per MIL-STD-202, Method 302, Condition B.
Altitude Immersion	Meets requirements of Par. 4.6.11 MIL-C-26500B (USAF) when potted and mated.
Temperature Range	−54°C (−65°F) to 260°C (500°F).

HIGH-TEMPERATURE VERSION

Shell	Stainless Steel.
Contacts	Stainless Steel. Terminal ends have flats to facilitate welding or brazing of conductors.
Inserts	Ceramic.
Face Seal	
Current Rating	1.0 Amp.
Voltage Rating	2000V AC minimum @ 60 Hz.
Insulation Resistance	200,000 Megohms @ 50V DC @ 73°F. 400 Megohms @ 900°F.
Altitude Immersion	Not applicable.
Temperature Range	−73°C (−100°F) to 538°C (1000°F) and more.

Application Tools for No. 20 Crimp Socket Contacts on 115-5050 Connectors

- Crimp Tool — 294-1166
- Bushing Positioner — For 18 Ga. Wire, 294-1468 — For 20 Ga. Wire, 294-1469.

CONNECTOR AVAILABILITY

The connectors shown below constitute only a representative selection of the 115 Series subminiature connectors available. Through rearrangement or modification of components, many other configurations can be produced to match your specific requirements. Consult your Amphenol representative for the answers to your particular application.

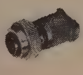
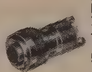
Keyway 30° counterclockwise. Stainless steel, passivated, coupling ring.



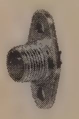
115-5035-1001 Plug
.687 dia. x 1.300
Mating Connectors:
115-5036, -5037, -5038, -5042, -5043 and -5060
Same as 115-5035 but has a mechanical strain relief clamp.



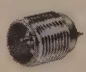
115-5050 Plug
.700 dia. x 1.500
Mating Connectors:
115-5036, -5037, -5038, -5042, -5043 and -5060
Improved version of 115-5053, including coupling ring locking mechanism & crimp Poke Home contacts.

115-5036 Receptacle
.532 dia. x .687
Mating Connectors:
115-5035, -5050 and 115-5035-1001
Flange notched 90° clockwise.

115-5037 Receptacle
.559 dia. x .687
Mating Connectors:
115-5035, -5050 and 115-5035-1001
Nickel plated steel housing silver brazed to connector.



115-5038 Receptacle
1.210 x .640 x .687
Mating Connectors:
115-5035, -5050 and 115-5035-1001
Nickel plated elliptical steel flange silver brazed to connector.



115-5042 Receptacle
7/16-27NS-2A x .687
Mating Connectors:
115-5035, -5050 and 115-5035-1001
Threaded shell (flangeless).

115-5040 Receptacle
.624 dia. x .776
Mating Connector:
115-5041
Hermetically sealed. Leakage less than .1 micron cu. ft. per hour.

115-5043 Receptacle
.532 dia. x .687
Mating Connectors:
115-5035, -5050 and 115-5035-1001
No notch on flange.

115-5043-1000 Receptacle (Same as 115-5043 except for key)
.552 dia. x .687
Mating Connectors:
115-5035-1000
Key 30° clockwise.

115-5060 Receptacle
.875 x .875 x .687
115-5060-1000 Receptacle
.750 x .750 x .687
Mating Connector:
115-5035, -5050 and 115-5035-1001
Nickel plated square steel flange silver brazed to connector.

115-5041 Plug
.625 dia. x .650
Mating Connector:
115-5040
Stainless steel, passivated, coupling ring.

HIGH TEMPERATURE VERSION

115-5059 Plug
.645 dia. x 1.460
For braided stainless steel armor wire.

115-5059-1 Plug
.645 dia. x 1.460
For 1/8" diameter 2-conductor hard-line cable.

115-5061 Plug
.562 Hex x 1.300
Like 115-5059-1 but smaller & lighter.

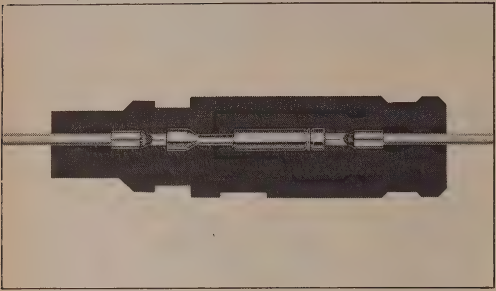
115-5066 Plug
.562 hex x 1.900
Like 115-5059-1 but good for 600°F and crimp contacts.

ENVIRONMENTAL-RESISTANT TRANSPORTATION CONNECTOR

BUNKER RAMO AMPHENOL

TRANSCON 44: BREAKTHROUGH IN DESIGN

Amphenol's 44 Series is an all resilient, one piece, waterproof connector. Amphenol design has incorporated crimp Poke-Home® contacts in five insert configurations. These 44 Series connectors offer high performance along with low cost, making this connector ideally suited for those applications where an environmentally sealed yet inexpensive connector is needed.



USER BENEFITS

- **Environmentally Sealed.** Waterproof seals prevent liquids from entering the connector to cause electrical or electronic circuit failures.
- **Longer Service Life.** The unique one-piece shell and insert construction minimize the number of parts and failure modes for predictably longer service life.
- **Durable.** The resilient connector body is abrasion resistant and is impervious to water, lubricants, fuel, ozone, and road salts.
- **Lower Installed Cost.** Punch-press contacts enable the use of automated stripping and crimping equipment resulting in a lower on-line production and installed assembly cost.
- **High Reliability.** The use of hooded female contacts in addition to the molded-in polarizing flat assures proper contact/connector alignment and eliminates the possibility of lost or cross-wired circuits.
- **Low Maintenance Cost.** Should the need arise, the connectors can be easily serviced in the field with the use of inexpensive hand crimp and insertion tools. This minimizes equipment down-time and required maintenance time.
- **Easy Mating.** Simple, positive, push-pull coupling and disconnect of connectors requires no special assembly instructions. Obvious visual and mechanical mating indicators help avoid damage to components resulting in lost or intermittent circuits.

NEW MATERIALS

Amphenol has incorporated a resilient material in the 44 Series which allows the insulator to be molded as one complete unit. This material proved to be the most successful under such conditions as salt spraying, vibration and shock. Added to this are Amphenol's Poke-Home® contacts made of a copper alloy with electro-tin plating. This combination makes the 44 Series not only highly reliable but less costly to use.

OPERATIONAL CHARACTERISTICS

Voltage Rating:	Limiting operating voltage at sea level - DC 250 Volts, AC 200 Volts RMS.
Current Rating:	5 amps continuous, 7-10 amp surge.
Temperature Range:	Continuous operation from —40°F to +255°F (—40°C to +125°C)

TERMINATION

A. Punch-press contacts utilize Essex type crimping equipment.

B. Contacts accept wire sizes of 14 AWG, 16 AWG, and 18 AWG with an overall wire insulation diameter range of .080 to .130 inches.

C. Standard contact packaging: 5,000 unit reels for semi-automatic machine crimping.

D. Contacts individually packaged for hand tool crimping applications.

TYPICAL APPLICATIONS

- 44 Series connectors can be used as truck accessory disconnects under the hood or frame, on axles or near the engine.
- Automotive applications could call for the 44 Series in systems such as anti-skid, brake warning, pressure warning or speed indication.
- Periphery equipment like toll booths, traffic signals or highway safety and lighting equipment also could have a need fulfilled by the 44 Series.
- Marine industry applications such as starter motors, distributors, batteries, controls and even fuel injection systems.
- Amphenol 44 Series connectors have excellent opportunities in the recreational vehicle where manufacturers are continually looking for better means of inter-connecting cars to trailer/campers.

AVAILABILITY

Amphenol's 44 Series connector family is available now. The 44 Series family now includes 2, 3, 4, 5, and 6 contact configurations.

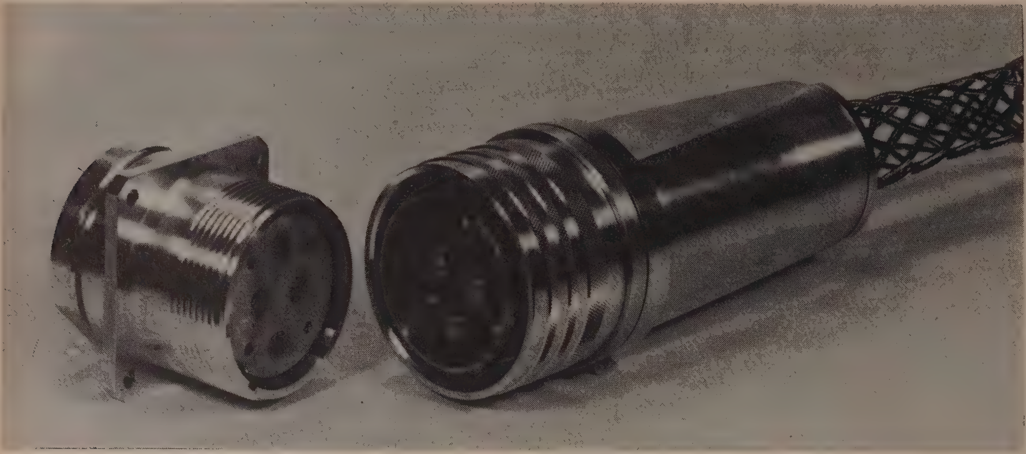
POWER-DISTRIBUTION INTERCONNECT

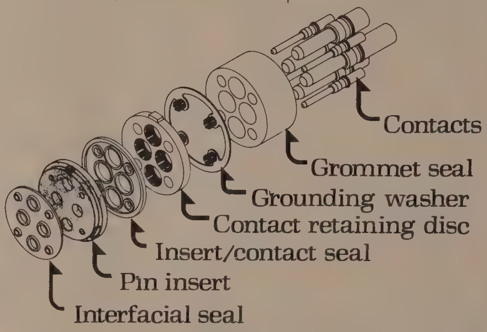
BUNKER RAMO AMPHENOL

229 SERIES



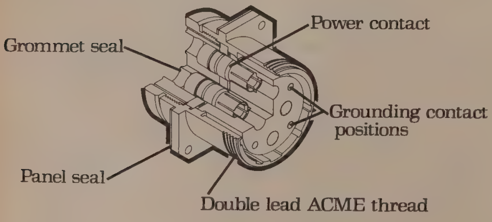
These Class L Connectors are a special design for power distribution using portable power cable. They are intended for use where they will be subjected to severe impact, such as dropping on concrete, run over by vehicles or subjected to extremes of field-service use. They are quenching if inadvertently separated under full load. They are waterproof when mated or unmated, capped or uncapped. They are designed to meet all OSHA and National Electrical Code requirements for grounding. They use insertable crimp-type contacts.

INTERNAL COMPONENTS



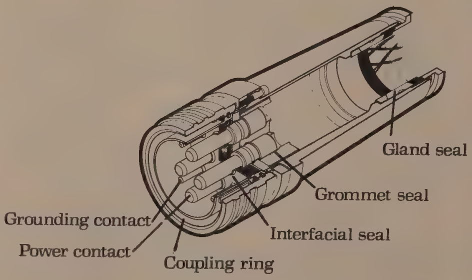
Contacts
Grommet seal
Grounding washer
Contact retaining disc
Insert/contact seal
Pin insert
Interfacial seal

WALL MOUNT RECEPTACLE



Power contact
Grommet seal
Grounding contact positions
Panel seal
Double lead ACME thread

STRAIGHT PLUG



Gland seal
Grommet seal

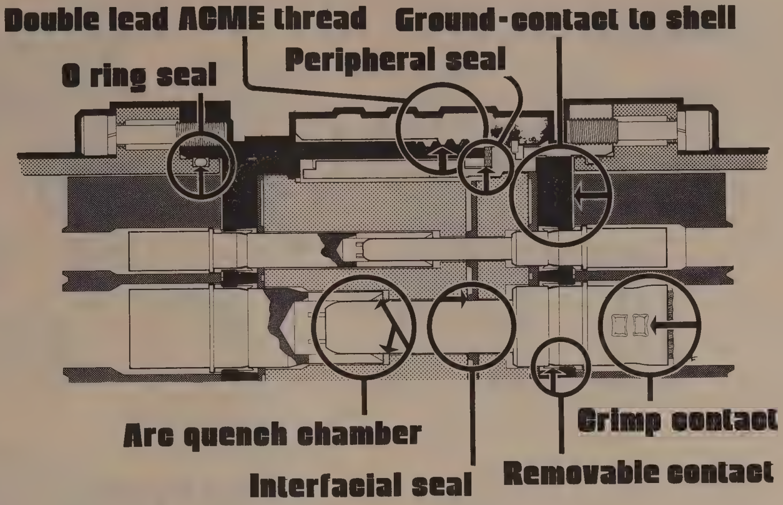
Interfacial seal
Power contact
Coupling ring

FOR LOCAL SOURCE OF SUPPLY SEE EEM VOL. 2 PAGE 462

POWER-DISTRIBUTION INTERCONNECT

BUNKER RAMO AMPHENOL

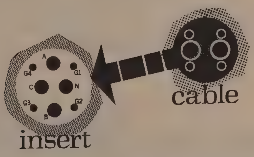
229 SERIES



FEATURES

- **SAFETY** — Complete protection for personnel and using equipment whether connectors are mated or unmated under rated load.
- **ARC QUENCHING** — Socket contacts are recessed within the socket insert to provide an arc-suppressing chamber within the connector. This assures positive safety for the user.
- **ENVIRONMENT RESISTANT** — Connector design and materials withstand the most severe operating conditions. See specifics in the Environmental Highlights Table.
- **CRIMP CONTACTS** — Connector design permits cable termination to contacts by solder or crimp method. Contacts are removable for repair or maintenance.

INSERT PATTERNS



- **MATCHED CONNECTOR/CABLE-CROSS SECTION PATTERNS** — Connector-insert patterns are designed to resemble and match cable cross sections. This feature greatly facilitates cable termination.
- **ACME-THREAD COUPLING** — Modified Acme thread will not clog under adverse conditions such as ice, snow, sand or mud. Quick coupling is an additional feature.
- **COMPLETELY WATERPROOF** — These connectors are completely waterproof assemblies regardless whether mated, or unmated, capped or uncapped. Sealing is accomplished by:

  Main-Joint Gasket
  "O"-Ring Seal
  Interfacial Seal
  Cable-Gland Seal
  Grommet Seal for Individual Conductors

Shell size	Current rating (amps)	Conductor size
28	40	6
32	60	4
44	100	1/0
*48	150	2/0
52	200	4/0

*Consult factory for availability.

- **HIGH CURRENT CAPACITY** — Five current ratings are available to 200 amperes in a 52 shell-size connector having four each #4/0 power contacts and four each #4 ground contacts.
- **NO CROSS MATING** — Connector design is foolproof, with mating polarization detailed for specific voltage, current, frequency, phase and grounding requirements. Five-key shell polarizing prevents mating with a connector of different power characteristics.
- **RUGGED** — All metal parts are high-strength aluminum. End connectors meet a cable-assembly drop test from a height of 6″. Molded parts are of high-strength materials designed to withstand heavy and severe usage.

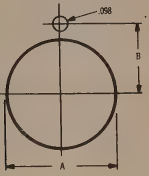
Connectors used in Ground Support Equipment must be rugged and reliable — and easy to handle under all conditions. Fully meeting these particulars, Amphenol's popular 89 series GSE connectors are used in many top missile projects. In fact, nearly every basic industry around the world depends on these heavy duty connectors. The growing list includes agriculture, mining, transportation, petroleum, marine, construction, and basic metals production. In short, they're a must whereever a rugged, completely waterproof electrical connection is required.

GSE connectors are completely waterproof and provide dependable service even when submerged in mud, ice or water. An internal rubber gasket in the cable clamp adapter, a type "W" washer at the mating faces and another washer used with panel mounting receptacles provide assured protection. Shells and cable clamp adapters are machined from top quality aluminum bar stock to achieve far greater strength than is possible to obtain with die cast methods.

For rough weather handling, coupling rings are extra-long and heavily grooved. Flats are conveniently located for field-servicing with standard open-end wrenches. Caps and chains are standard on all connectors.

Amphenol GSE connectors are available in a large number of standard MS inserts. They are interchangeable with AN/MS connectors with the same shell size and insert arrangement. Connectors exceed the water immersion requirements of MIL-C-12520. Inserts conform to MIL-C-5015.



Shell Size	Dimensions — Inches A +.010 −.000	B ±.002

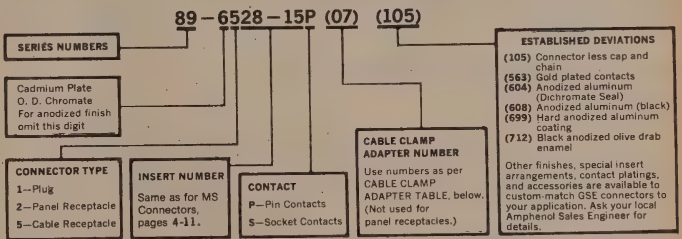
* Includes cable clamp adapter

HOW TO ORDER 89 SERIES CONNECTORS

1. Select the 89 series connector to match the application: plug, panel receptacle, or cable receptacle.
2. Select the insert. Amphenol 89 Series inserts have the same size and arrangement as MS connector inserts of the same designation. Select the insert to meet your requirements from the Insert Configuration Table, pages 4-11. Then check this insert number against the 89 Series Insert Availability Table below to make sure it is available for Submersion-Proof Connectors.
3. From the table of cable clamp adapters below find the cable clamp adapter to fit the cable O.D. you will use.
4. Put together the part number as per the following typical example:



89 – 6528 – 15P (07) (105)

SERIES NUMBERS

Cadmium Plate
O. D. Chromate
For anodized finish
omit this digit

CONNECTOR TYPE
1—Plug
2—Panel Receptacle
5—Cable Receptacle

INSERT NUMBER
Same as for MS Connectors, pages 4-11.

CONTACT
P—Pin Contacts
S—Socket Contacts

CABLE CLAMP ADAPTER NUMBER
Use numbers as per CABLE CLAMP ADAPTER TABLE, below. (Not used for panel receptacles.)

ESTABLISHED DEVIATIONS
(105) Connector less cap and chain
(563) Gold plated contacts
(604) Anodized aluminum (Dichromate Seal)
(608) Anodized aluminum (black)
(699) Hard anodized aluminum coating
(712) Black anodized olive drab enamel

Other finishes, special insert arrangements, contact platings, and accessories are available to custom-match GSE connectors to your application. Ask your local Amphenol Sales Engineer for details.

EXAMPLES: To get a plug with a 32-6 insert, pin contacts, and cable clamp adapter that will take a .319" to .375" (tolerance included) cable jacket, you would order 89-132-6P(06). To get the same plug cadmium plated with an olive drab chromate conversion coating, you would order 89-6132-6P(06). To get the same cadmium plated O.D. finish plug with socket contacts, you would order 89-6132-6S(06).

If you don't want the cap and chain, add (105) to the part number. For example, to order the same cadmium plated O.D. finish plug with socket contacts as above but without cap and chain, you would order 89-6132-6S(06)(105).

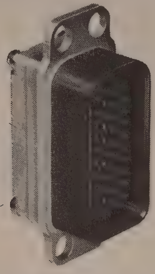
RACK AND PANEL CONNECTORS

BUNKER RAMO AMPHENOL

217 SERIES - MIL-C-26518

MINIATURE ENVIRONMENT RESISTANT CONNECTORS



A SIGNIFICANT ADVANCE IN THE STATE-OF-THE-ART — On the ground or in space, wherever there is a requirement for superior environmental protection, high performance, and minimum weight and bulk, 217 Series miniature environment resistant connectors are the answer.

In developing the 217 Series, Amphenol faced the problem of satisfying reliability, logistics, and present and anticipated environmental requirements for connector usage. To solve the problem, Amphenol had to generate advanced design concepts, formulate materials specifically for connector usage, and work out new production techniques. The resulting 217 Series connectors exceed the stringent requirements of both MIL-C-26518 (USAF) and MIL-C-38300 (USAF) for performance and reliability.

TWO VERSIONS — 217 Series connectors are available in two different versions:

1. Both mating faces in silicone rubber, conforming to MIL-C-26518 (USAF).
2. The plug (with socket contacts) incorporating the Amphenol Ultra-Mate® principle — a hard dielectric face conforming to MIL-C-38300 (USAF).

Since the receptacle (with pin contacts) is identical in both versions, there is complete inter-mateability with either the standard resilient plug or the Ultra-Mate.

COMPLETE ENVIRONMENTAL SEALING — Monoblock construction, with bonded interfaces between the three dielectric components (insert, anti-deflection disc, and grommet) eliminates air voids and protects connectors from degrading moisture and altitude conditions. Amphenol-developed silicone rubber dielectric provides resilience and unsurpassed resistance to tear, compression set, fluids, and high temperatures. On mating, insert faces compress to form a resilient dielectric seal around each individual contact. Together with monoblock construction, this puts void-free, continuous dielectric around each contact through the entire connector length.

A pressurizing seal around each contact prevents the passage of air or moisture through the contact hole, and twin sealing risers at each wire hole in the grommet double-seal each individual wire. A continuous barrier on the periphery of the socket insert mates with a recess around the pin insert to form an additional compression seal. A dynamic lip seal between mated shells constitutes still another barrier to dirt and moisture, and protects the integrity of the face seals.

GO/NO-GO RELIABILITY — When an Ultra-Mate connector mates, you can be sure there is proper electrical contact. In Ultra-Mate connectors of the 217 Series, the socket contacts are closely surrounded by hard dielectric. Where connector pins are slightly misaligned, the beveled entry of Ultra-Mase connectors guides them in right. However, if the pins are badly bent, the hard dielectric presents a closed entry and prevents mating. To insure contact seal, there is an additional resilient layer behind the hard face.

LIGHT WEIGHT AND HIGH CONTACT DENSITY — Connector shells are of high-strength, impact-extruded aluminum forgings with a high strength-to-weight ratio. The insert arrangement is designed for the maximum number of contacts within the area available.

POKE-HOME® CONTACTS — The Poke-Home contacts can be individually inserted or removed without disassembling the connector or disturbing adjacent contacts. Even in the Ultra-Mate connectors, which have a hard dielectric face, they can be released from the front. These high temperature, MIL-C-26636 contacts are crimped quickly, consistently, and reliably with either hand or power tools, shown on page 2•500. They have high electrical conductivity, present a smooth configuration, and completely protect electrical contact pressure-members from environmental and handling damage. The contacts come in sizes 12, 16, 20, and shielded, with rhodium-over-silver plating.

VARIETY OF CONFIGURATIONS — Plugs and receptacles are available in two shell sizes with various contact arrangements. Contacts are crimp applied. Connectors are mated under tension by dual spring-loaded mounting assemblies and fixed bushings. Either the plug or the receptacle may be spring loaded. The receptacle mounts on the panel front or rear.

COMPONENTS INCLUDED

0 Plug or Receptacle Connector **with** contacts and spare sealing plugs.

1 Plug or Receptacle Connector **without** contacts.

2 Connector with captive retainer and spring mounting assemblies assembled to connector **without** contacts.

3 Same as 2 except **with** contacts included, packaged separately.

4 Connector, **without** contacts, with retainer nuts (MS* Fixed bushing) packaged separately.

5 Same as 4 except **with** contacts incuded, packaged separately.

6 Connector, **without** contacts, with spring loaded mounting assembly (MS**) packaged separately.

7 Same as 6 except **with** contacts included, packaged separately.

8 Connector without contacts, with retainer nuts (stainless) (MS* Fixed Bushing) packaged separately.

9 Same as 8 except with contacts included, packaged separately.

*Fixed Bushing:

MS No.	AMPHENOL No.
MS 24700-1	217-537 (Set of 4) Aluminum
MS 24700-2	217-955 (Set of 4) Stainless

**Spring Loaded Mounting Assembly:

MS 24695-1	217-678 (A Size) (Set of 4)
MS 24695-2	217-679 (B Size) (Set of 4)

SHELL FINISH

1 MIL-C-26518 hard coat anodize on front of shell, gold iridite on flange and on grommet ferrule
5 Gold Iridite
6 Black Anodize

The part numbering system has been set up to provide a complete and exact description through the part number. To find the Amphenol part number to order, put together the four groups of digits and letters that specify the particular 217 Series connector you want, as per the following example.

POKE-HOME CONTACTS AND TOOL APPLICATIONS

48 AND 248 SERIES CONTACTS FOR 48 AND 217 SERIES CONNECTORS

CONTACTS

When you order 48 or 217 Series connectors with contacts, the contact package contains enough contacts to complete the insert arrangement and have at least 2 spares left. The package also includes enough sealing plugs for at least 15% of the contacts in the insert, in any case a minimum of 3 sealing plugs. To order contacts and sealing plugs separately use the part numbers in the table below. Contacts may also be ordered in reels or bowls for use with automatic/feed crimping tools.

TOOLS

Note that various tools are available for crimping, inserting, and removing each size contact. However, the recommended tools are indicated in red.

* Replaces No. 12 power contact. ** See cable application table below

† These tools are applicable to all #1 and #2 shielded contacts, respectively, not just contacts listed here.

NOTE: To maintain the environmental seal and to prevent the other contacts from becoming misaligned, insert a #12 contact, pin or socket as applicable, into any empty connector holes intended for a #1 shielded contact but left unused. Then seal with a sealing plug.

— SAMS Operation —

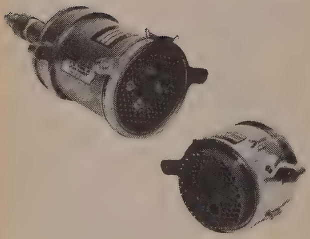
For an answer to your interconnection problems call on the best — call on Amphenol.

Amphenol SAMS Division, pioneers in high reliability interconnection systems for the Aerospace industry, produces a wide variety of electrical interconnects for aircraft, nuclear power plants, naval vessels, ground vehicles and equipment, and missile/ordnance systems.

The solution to your problem, whether a simple wire harness assembly for a Military combat vehicle, or a sophisticated cable system for missile guidance and control, can be produced to your specifications or can be custom designed to meet your performance requirements.

We have provided some of the most complex, EMI/RFI shielded multi-element interconnection systems ever produced/designed, manufactured and tested to standards never before achieved, for programs where technical skills are paramount —

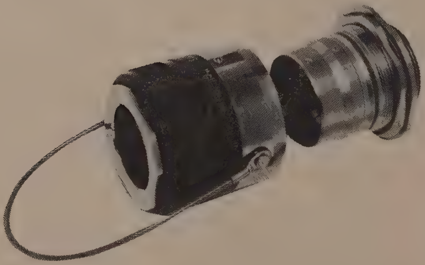
Yet, as many have learned, our skills at saving you money in a design-to-cost effort are just as sharply honed.



HAWK LAUNCHER HARNESS

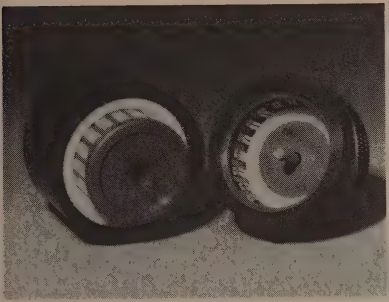
SPECIALIZED CAPABILITIES

GENIE 711 SERIES is an example of our specialized capabilities. This new reliable design configuration is for multiple applications of **quick-disconnect, umbilical** electrical connections. Mate by a straight axial push! disconnect any one of three ways: 1.) Standard lanyard quick-disconnect with optional manual release; 2.) Lanyard quick-disconnect with safety-latching provision and 3.) Conventional disconnect.



SAMS
Amphenol Connector Division
— SAMS Operation —

SPECIAL PURPOSE CONNECTORS



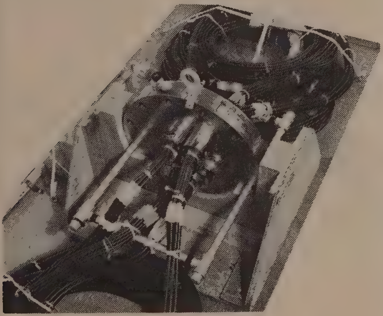
WHEN THE CONNECTOR YOU NEED IS NOT IN A CATALOG...

...SAMS is the place to call! One of our primary concerns is finding new approaches to disconnect methods, contact design and interconnection assembly.

Even harsh environments such as EMI/RFI/EMP exposure to nuclear radiation are challenges successfully met numerous times by SAMS! Years of experience in the aerospace and missile fields have enabled SAMS to solve connector problems never encountered by most connector manufacturers, and have permitted us to accumulate a background of specialized knowledge available nowhere else in the industry.

If your connector is not a catalog item, call SAMS. **Ours** aren't either!

NUCLEAR POWER PRODUCTS



HELPING TO SOLVE THE ENERGY CRISIS...

...is one of SAMS' more important activities; and we have pioneered the field of electrical interconnections for nuclear reactor plants. You'll find SAMS-designed electrical penetration assemblies (EPA's) in many major nuclear projects in the United States today. They're engineered to meet not only the electrical/electronic requirements of the interface between the reactor and its surroundings, but also to withstand the hostile environment of the reactor itself.

In addition to EPA's, SAMS produces radiation-resistant instrumentation, power and special connectors, splices and other pre-fabricated nuclear interconnection devices for use within this most destructive environment.

If your interconnection needs are nuclear oriented, whether in power plants, test or research facilities, you'll find expert assistance at Amphenol SAMS.

FOR LOCAL SOURCE OF SUPPLY SEE EEM VOL. 2 PAGE 462

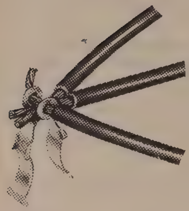
USEFUL INFORMATION ABOUT AMPHENOL INDUSTRIAL INTERCONNECTIONS

Amphenol Industrial Division offers the most comprehensive line of industrial interconnections obtainable anywhere. The information here covers Amphenol's complete line of industrial **standard** interconnections, ordinarily available from stock.

Amphenol also has a large selection of **non-standard** industrial interconnections, too numerous to classify. If you do not see what you require, contact the factory for availability and full information.

THIS INFORMATION WILL HELP YOU MAKE THE MOST EFFICIENT USE OF THE FOLLOWING PAGES

CONTACTS FOR LOW-RESISTANCE SERVICE



"A" CONTACT

Used for all standard-size Amphenol sockets with 4, 5, 6 or 7 contacts. Provides a firm grip on large tube or relay prongs and permits soldering several wires to one lug. Wire-hole diameter: .078".

"B" CONTACT

Used for all standard-size Amphenol sockets with 8, 9, 10 or 11 contacts, except loktal types. Commonly called "tuning-fork" contacts, they form a low-resistance contact with tube or relay prongs. A series of waves along the two tines assure excellent wiping action to remove films and foreign matter. Wire-hole diameter: .082".

CLOVER-LEAF CONTACT

Used for octal socket 59-103 (page **2•512**). Patented design provides superior retention on mating plug to resist vibration and shock in severe-service applications. Solder tail has two .093" wire holes.

WRAP-AROUND CONTACT

Used in several standard tube and relay sockets and audio-type connectors. Furnishes a full 360° of contact with the mating pin for high conductivity. Solder tail has one .093" x .078" wire hole.

WIRE-WRAPPABLE CONTACTS

are available for all 77-MIP and 78-S-type sockets having 8 or more contacts. Two post sizes are offered—.016"x.062" for up to 22 AWG wire; .025"x .062" for up to 16 gauge. Both half-inch-long tails accept two wrap levels.

PRINTED-BOARD CONTACTS

are a standard option for all 77-MIP- and 78-S-type sockets with 8 contacts or more. They are easily inserted into .0625"-diameter plated-through holes in printed boards and dip or wave soldered into place. Useable tail length is ⅛" with a tapered tip for fast insertion. The contact shoulder rests on the board to maintain a 1/16" clearance for ventilation or cleaning.

CHOICE OF MOUNTINGS

MIP (MOLDED-IN-PLATE)

Sturdy steel mounting plate is molded directly into phenolic body to eliminate breakage frequently encountered when riveting laminated type sockets. Designed for above chassis mounting, but can also be mounted below chassis.

RETAINER RING

Sockets mount quickly and easily without screws or rivets. Retainer rings are easily assembled with the Amphenol Retainer-Ring Hand Tool (see p. **2•514**). Sockets with multiple notches may be positioned to line up contacts for most convenient wiring.

REPLACEMENT TYPE

Steel mounting plate is firmly assembled to socket with retainer ring. Sockets with multiple notches may be positioned to line up contacts with original wiring.

FOR LOCAL SOURCE OF SUPPLY SEE EEM VOL. 2 PAGE 462

SELECT YOUR DIELECTRIC AND CONTACT MATERIALS

Many tube/relay sockets, plugs and other industrial interconnections are used for applications for which they were not originally intended. To assure reliable service, these non-standard uses should be analyzed prior to ordering to determine the best combination of contact and dielectric materials for the application. To aid in selection, the information that follows outlines electrical and mechanical properties of contact and dielectric material available from Amphenol.

CONTACT MATERIALS

BRASS

Brass has high conductivity and is relatively low in cost. However, it age-hardens or crystallizes under stress; thus will not stand up to repeated insertion/withdrawal cycles. Brass contacts can change in form and spring qualities over a period of time.

PHOSPHOR BRONZE

In the medium-cost area, approximately 50% higher than brass. Spring quality is good. However, it has lower conductivity in comparison with other copper alloys.

LUBALOY

A 90% copper, 8.25% zinc, 1.75% silver alloy which is relatively low in cost with fairly good conductivity characteristics. Its spring quality is less than that of phosphor bronze.

BERYLLIUM-COPPER

After proper heat treatment, beryllium-copper contacts have substantially greater life-cycle characteristics and will withstand more insertion and withdrawal cycles over a wider range of pin sizes than any other commercial non-ferrous spring material. Sockets utilizing beryllium-copper contacts are ideally adapted to test equipment and other applications where changing of tubes, relays or plugs is frequent. The material does not age-harden or crystallize over a reasonable period of time.

DIELECTRIC MATERIALS

GENERAL-PURPOSE PHENOLIC

Black, wood-flour-filled phenolic for applications requiring good electrical qualities with mechanical characteristics better than the acceptable minimum.

MICA-FILLED PHENOLIC

Tan/yellow, low-loss, low-water-absorption, mineral-filled phenolic compound for applications requiring superior dielectric properties.

CERAMIC

Grey/white, withstands high temperatures, is non-hygroscopic, has low-loss factor. Recommended for high-frequency work, in transmitters and amplifiers where output is greater than 20 watts. Also recommended for relays or other apparatus which are located in or near high-temperature equipment.

DIALLYL PHTHALATE

Blue, mineral-filled for use where close dimensional tolerances must be met, dimensional stability is a must and where high arc- and insulation-resistance are required. Especially recommended where electrical and mechanical characteristics must be maintained under operating conditions involving extreme humidity and temperature. A superior dielectric material available on special order.

DIELECTRIC MATERIALS ELECTRICAL/MECHANICAL CHARACTERISTICS

Molding Compound ⟶	General Purpose Phenolic	Mica Filled Phenolic	Ceramic	Diallyl Phthalate

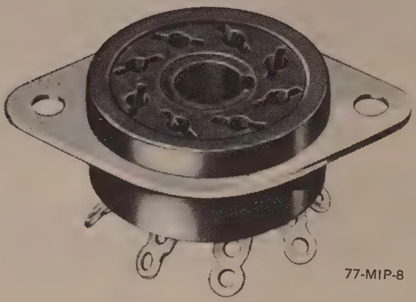
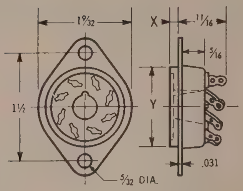
TUBE/RELAY SOCKETS

BUNKER RAMO AMPHENOL

77-"MIP" MOLDED-IN-PLATE SERIES Solder Termination



77-MIP-8



X=$\frac{3}{32}$ on MIP-4-5-6-7S & 7L
X=.145 on MIP-8-9-11-12
Y=$1\frac{7}{64}$ on MIP-4-5-6-7S
Y=$1\frac{15}{64}$ on MIP-7L-20
Y=$1\frac{9}{64}$ on MIP-11-12

These sockets have a steel plate molded directly into the solid phenolic body to assure secure, reliable mounting. The steel plate also eliminates the possibility of breaking ordinary laminated sockets while riveting them to the chassis or crimped-on plates loosening in service.

Contacts are spaced for easy, fast wiring. Two holes in each contact tail provide wiring and anchoring points for resistors, capacitors, chokes and other components.

These sockets are intended for above-chassis mounting in round holes $1\frac{3}{16}''$ diameter. 77-MIP-20 only requires a $1\frac{5}{16}''$ hole. Design also allows for below-chassis mounting.

Standard sockets are molded in general-purpose black phenolic; mounting plate is nickel-plated steel; contacts are cadmium-plated copper alloy. Optional materials and finishes available from stock include mica-filled phenolic, phosphor-bronze, silver-plated contacts with stainless-steel mounting plate; or tinned contact tails on special order. See ordering information.

ORDERING INFORMATION

Part No.	Contacts			Pin Circle Diameter	Voltage Rating (RMS)	Current Rating (Amps)	Mating Plug (p. 2•512)
	No.	Material	Type (p. 2•504)				
77-MIP-4	4	Brass	A	.640	2000	5	86-CP4
77-MIP-5	5	Brass	A	.750	1250	5	86-CP5
77-MIP-6	6	Brass	A	.750	1250	5	86-CP6
77-MIP-7S	7 Std.	Brass	A	.750	1250	5	86-CP7S

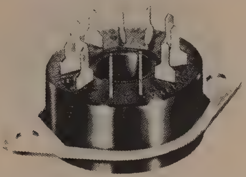
77-MIP-20	20	Brass	Wrap Around	1.000 Outer .687 Inner	500	3	71-20

For deviations from standard, put deviation letter or number **after** part number above as follows: T—mica-filled phenolic; M—phosphor-bronze, silver-plated contacts and stainless-steel mounting plate; 1—tinned contact tails. Example: 77-MIP-9TM 1.

FOR LOCAL SOURCE OF SUPPLY SEE EEM VOL. 2 PAGE 462

77 "MIP" MOLDED-IN-PLATE

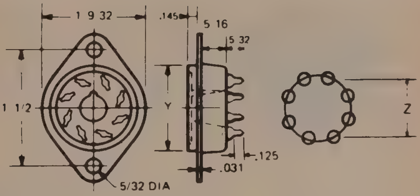
PRINTED-BOARD TERMINATIONS



Simplify production of printed boards requiring vacuum tubes or plug-in relays. Simply insert sockets into .0625"-diameter plated-through holes in boards and flow- or wave-solder into place. The molded-in-plate reduces strain on the terminals during tube or relay insertion or withdrawal when the mounting plate is fastened to the board with screws and spacers.

Tapered "lead-in" terminals assist in fast insertion and each has a shoulder allowing .016" clearance above the board for better air circulation and ease of cleaning.

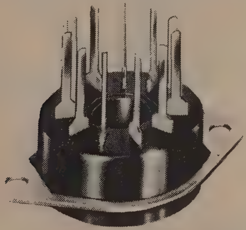
Contacts are cadmium-plated Lubaloy. Their tuning-fork design provides positive wiping action on the pins for low-contact resistance and high retention force. Tails are ⅛" long, 1/16" wide, .016" thick. Mount on printed boards up to ⅛" thick. Each contact is rated 3 amp continuous. Dielectric is general-purpose black phenolic.



DIMENSIONS AND ORDERING INFORMATION

Number of Contacts	Part Number	(Z) Pin Circle Diameter	Y
8	77-MIP8W-0125	.687	1 7/64"
9	77-MIP9W-0125	.687	1 7/64"
11	77-MIP11W-0125	.750	1 9/64"
12	77-MIP12W-0125	.750	1 9/64"
20	77-MIP20W-0125	outer 1.000 inner .687	1 15/64"

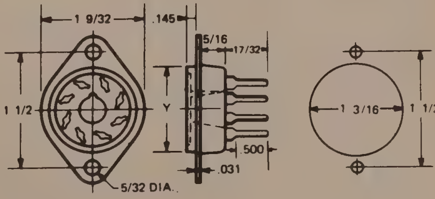
WIRE-WRAPPING TERMINATIONS



Here is real convenience for users of hand and/or semi-automatic wire-wrapping equipment. Terminate tube or relay sockets in the same operation as other components to eliminate the extra soldering operation.

Dielectric is general-purpose black phenolic. Contacts are cadmium-plated copper alloy for resistance to oxidation and improved conductivity. All tails are ½" long and 1/16" wide. Two thicknesses are available for different amperages and wire sizes, as follows:

	Standard Contact	Heavy-Duty Contact
Thickness	.016"	.025"
Current Rating	3 amp. cont.	7.5 amp. cont.
Contact Retention Force (One .093" dia. pin)	3 oz. min.	5 oz. min.
Wire size	Accepts 2 wraps of 22 AWG wire	Accepts 2 wraps of up to 16 AWG wire



ORDERING INFORMATION

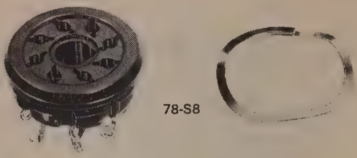
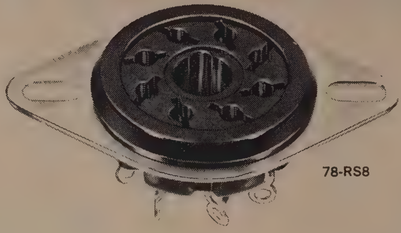
TUBE/RELAY SOCKETS

BUNKER RAMO AMPHENOL

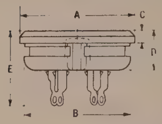
78 "S" SERIES
with retainer-ring mounting and solder-eyelet termination

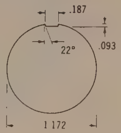


78-S8



78-RS8





Recommended Panel Cutout

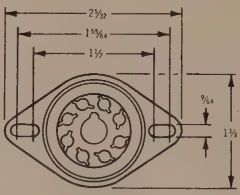
DIMENSIONS

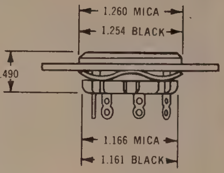
Sockets	A	B	C	D	E
78-S4,-S5,-S6,-S7S	1¼	1$\frac{5}{32}$	.135	.420	$\frac{27}{32}$ Approx.
78-S8,-S9,-S11,-S12,-S16	1¼	1$\frac{5}{32}$	.145	.490	⅞ Approx.

Aside from mounting provisions, 78S Series Sockets are identical to the 77-MIP Series described on pgs. **2•506** and **2•507**, both in characteristics and deviations available. The 78S Series features retainer-ring mounting for quick, easy, secure fastening to the chassis or panel without screws or rivets. Mount them either with a screwdriver or Amphenol Hand Tool 51-3 (see p. **2•513**). 78S Series Sockets are notched around their circumference to permit positioning and mounting in the location that allows the most convenient wiring. One retainer ring is furnished with each 78S Series Socket.

These sockets can also be used with 86 CP type plugs and 3 Series plug caps to make reliable, low-cost cable assemblies.

IMPORTANT: Specify chassis thickness. Unless otherwise specified, 78S Series Sockets are grooved to fit from 22 gauge (.031") to 18 gauge (.050") panels or chassis. This standard grooving also fits standard plug caps (p. **2•521**). To assure a secure mount when chassis or panel is outside the 22 to 18 gauge limit, specify exact thickness and then the sockets will be grooved to order. Non-standard groove locations are available to fit up to 13 gauge (.093") panel thickness.





REPLACEMENT SOCKETS

These sockets are ideal for all replacements, especially as substitutes for broken and noisy wafer types. They are standard 78S Series Sockets, but with a sturdy, nickel-plated steel mounting plate fastened by a retainer ring.

Slotted mounting holes fit all centers from 1½" to 1$\frac{55}{64}$". Other dimensions and characteristics are identical to the 78S Series Sockets above.

ORDERING INFORMATION

To order 78-RS Series Sockets, put together the part number as in the following example:

78—R S 4 T M 1

78 Series

Type
RS—Replacement
S—"S" Type

Number of Contacts

4 -4	8-8 Octal
5 -5	8L-8 Loktal
6 -6	9-9
7S -7 std.	11-11
	16-16

DEVIATIONS

Where no deviations are specified, mounting plate is steel, contacts are cadmium-plated brass, contact tails are not tinned, and dielectric is black phenolic. To specify any of the following deviations, add these designations at the end of the part number:

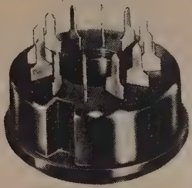
T—Mica-filled phenolic
M—Phosphor-bronze, silver-plated contacts
1—Contact tails tinned

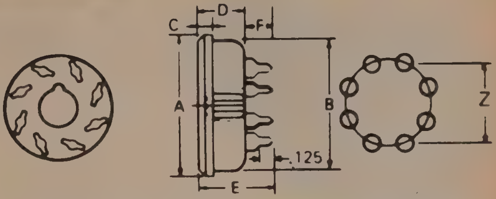
FOR LOCAL SOURCE OF SUPPLY
SEE EEM VOL. 2 PAGE 462

TUBE/RELAY SOCKETS

BUNKER RAMO AMPHENOL

PRINTED-BOARD TERMINATIONS





Where vacuum tubes or plug-in relays must be mounted on printed boards, these are the sockets to use for fast, trouble-free production. Simply insert contact tails into .065"-diameter plated-through holes in board and wave- or flow-solder in place. Contacts have tapered tips on tails to facilitate insertion and a .016"-deep shoulder which provides clearance between the socket and board for improved air circulation and easier cleaning.

Contacts are cadmium-plated Lubaloy. Tuning-fork design provides unmatched wiping action for low contact resistance and high retention force. Contact tails are ⅛" long (exclusive of tapered lead-in portion), ¹⁄₁₆" wide and .016" thick. Easily mounts on boards up to ⅛" (.125") thick. Current rating: 3 amp continuous. Dielectric is general-purpose black phenolic.

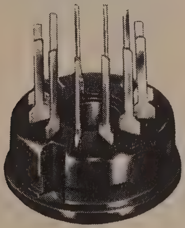
DIMENSIONS AND MOUNTING INFORMATION

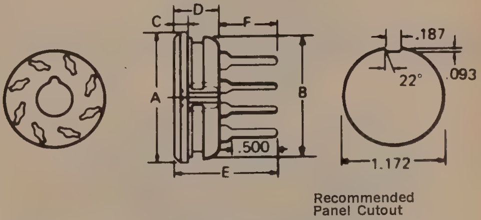
Sockets	A	B	C	D	E	F
All	1¼	1⁵⁄₃₂	.145	.490	Approx. .646	⁵⁄₃₂

ORDERING INFORMATION

Number of Contacts	Part Number	(Z) Pin Circle Diameter
8	78-S8W-0125	.687
9	78-S9W-0125	.687
11	78-S11W-0125	.750
12	78-S12W-0125	.750
16	78-S16W-0125	outer .750 inner eccentric

WIRE-WRAPPABLE TERMINATIONS





Users of wire-wrapping equipment can simplify their production operations with these sockets. Hand or semi-automatic-wrap vacuum tube or relay sockets at the same time other components are wire-wrapped, thereby eliminating additional soldering steps. Sockets are easily mounted in panels .031" to .050" thick with Amphenol Retainer Ring hand tool (p. **2**•513).

Dielectric is general-purpose black phenolic, with contacts of cadmium-plated copper alloy. Tails are ½" long and ¹⁄₁₆" wide. Two tail thicknesses are available, as shown below:

	Standard Contact	Heavy Duty Contact
Thickness	.016 in.	.025 in.
Current Rating	3 amps continuous	7.5 amps continuous
Contact Retention Force (Single .093" dia. pin)	3 oz. min.	5 oz. min.
Wire Gauge	Accepts 2 wraps of 22 gauge wire	Accepts 2 wraps of up to 16 gauge wire

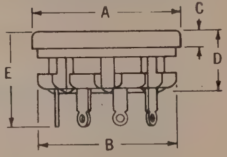
Recommended Panel Cutout



CERAMIC 49SS SERIES

Designed for high-temperature applications, these 49SS Series Sockets are non-hygroscopic and have low-loss factor. Amphenol ceramic will withstand continuous operating temperatures of 1400°F. Contacts are silver-plated phosphor-bronze for continued high retention.

These sockets feature Amphenol Retainer-Ring design for fast, easy, compact mounting with a screwdriver or the Retainer-Ring Hand Tool (p. **2•513**). They are grooved to fit up to .093″ chassis or panel thickness. A spacer washer furnished with each socket permits the unit to be mounted firmly to any chassis from 1/32″ to 1/16″ thick.

Dimensions

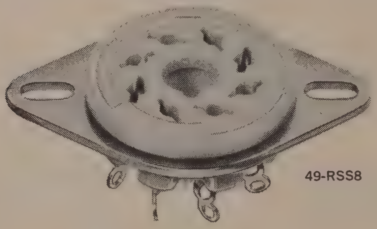
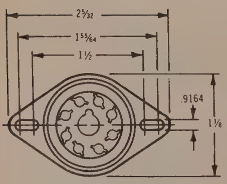
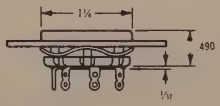
49RSS CERAMIC REPLACEMENT SOCKETS



49-RSS8





Ideal for high temperature and humidity applications where other sockets fail, these ceramic replacement units have an already-assembled retainer ring and nickel-plated-steel mounting plate. Slotted mounting holes permit mounting screws or rivets on centers from 1½″ to 1 55/64″ to make installation quick and easy. A chassis or panel cutout of 1 9/32″ is required for mounting the socket. Contact material and type, pin-circle diameter and electrical characteristics are identical to the 49SS Series above with a corresponding number of contacts.

ORDERING INFORMATION

49-RSS4	4-contact Ceramic Replacement Socket
49-RSS8	8-contact Ceramic Replacement Socket

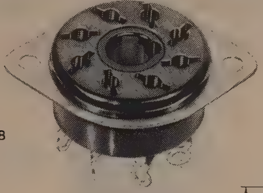
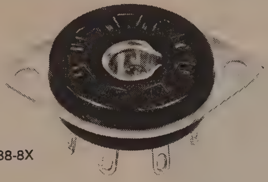
TUBE/RELAY SOCKETS

BUNKER RAMO AMPHENOL

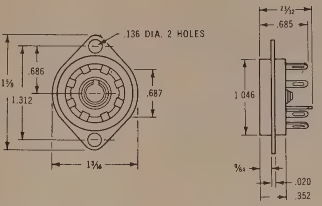
88 SERIES COMPACT "MIP" SOCKETS



88-8



88-8X



These 8-contact sockets have rugged molded-in mounting plates and mount in 1⅛"-diameter round holes.

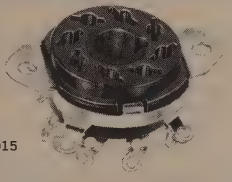
The 88-8 socket mates with standard "Octal" plug bases and its smaller size requires less space. The 88-8X "Loktal" socket incorporates a center ground contact to grip the pilot post of the tube. Outer contacts accept .040" to .050"-diameter pins.

Both styles have cadmium-plated phosphor-bronze contacts. Dielectric is general-purpose black phenolic. They are rated 1250 volts (RMS at sea level), 3 amp. per contact.

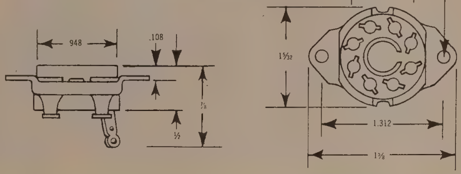
ORDERING INFORMATION

88-8	Octal Compact "MIP" Socket
88-8X	Loktal Compact "MIP" Socket

88 SERIES SADDLE-TYPE OCTAL SOCKET



88-015



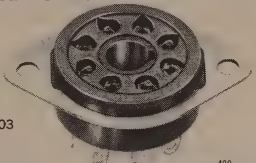
Economical sockets with 4 lugs for easy below-chassis mounting. Choice of either wrap-around or tuning-fork contacts (see p. **2**•504). "Clinched-on" mounting plate has two .140"-diameter mounting holes. Socket mounts through 1"-diameter round hole. Black, general-purpose-phenolic dielectric. Mica-filled dielectric also available on special order.

Rated 1250 volts (RMS at sea level), 3 amp per contact maximum.

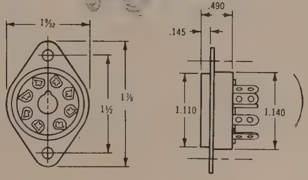
ORDERING INFORMATION

Part No.	No.	Contacts	
		Material	Type (p. 2•504)
88-001	8	Brass	Wrap-around
88-015	8	Lubaloy	B

59 SERIES HEAVY-DUTY OCTAL SOCKET
with clover-leaf contacts



59-103



Intended for extended-service conditions — for example, repeated insertion/withdrawal cycles and high retention forces in spite of shock or vibration — this rugged socket is an exact replacement for 77-MIP-8 (p. **2**•506). Cloverleaf-type contacts are silver-plated phosphor-bronze and ultra-reliable. Stainless-steel mounting plate is molded directly into mica-filled phenolic body. Rated 1250 volts (RMS, sea level), 3 amp.

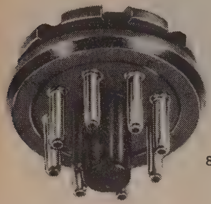
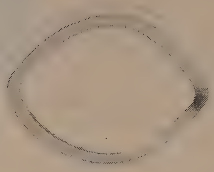
STANDARD PLUGS

BUNKER RAMO AMPHENOL

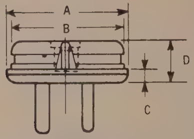
86-CP SERIES
with retainer-ring mounting

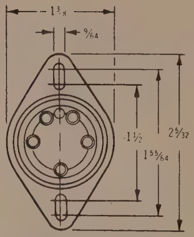


86-CP8



86-RCP-5





DIMENSIONS

Part No.	A	B	C	D
86-CP4, -CP5, -CP6, -CP7S	1¼	1 5/32	5/32	7/16
86-CP8, -CP9, -CP11, -CP12, -CP16	1¼	1 5/32	.145	7/16

No screws or rivets required for 86-CP Series plugs, but mounting is secure and reliable nonetheless with the Amphenol Retainer Ring. One is furnished with each plug. Retainer ring is easily assembled with the 51-3 Hand Tool (opposite page).

Use as chassis connectors with plug-in units; or as inexpensive cable connectors. They can also be assembled into plug caps or receptacle shells (both p. 2•521). Guide posts are omitted on plugs with 4 to 7 contacts, but they are positively polarized by the use of two pins with larger diameter than the others.

Contacts are nickel-plated brass. Standard dielectric is general-purpose black phenolic. All 86-CP Series Plugs are also available in mica-filled phenolic on special order. To order mica-filled, add "T" to part number. Example: 86-CP8T.

IMPORTANT: Specify chassis thickness. Unless otherwise specified, plugs are grooved to fit 22 gauge (.031") to 18 gauge (.050") panels or chassis. This standard grooving also fits plug caps (page). To assure secure mounting on chassis or panel of gauges outside these limits, specify exact thickness and plugs will be grooved to order. Plugs can be grooved to fit up to 13 gauge (.093").

86-RCP SERIES REPLACEMENT-TYPE PLUGS

These are standard 86-CP Series Plugs with an already-assembled retainer ring holding a nickel-plated-steel mounting plate.

Slotted mounting-plate holes accommodate rivets or screws on 1½" to 1 55/64" centers.

86-RCP ORDERING INFORMATION

To order 86-RCP Series Replacement-type plugs, insert "R" in standard part numbers in chart below. Example: 86-RCP8. Standard dielectric is general-purpose black phenolic, but mica-filled phenolic is also available on special order. To order mica-filled, add "T" to part number below. Example: 86-RCP8T.

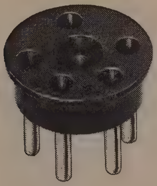
71 SERIES MOLDED SPEAKER-TYPE PLUGS



71-5

Originally designed as speaker plugs, but are also useful for many other purposes—test panels, intercommunications systems, public-address systems, etc.

Contacts are rigidly secured in the dielectric—cannot work loose or get out of alignment. All plugs are positively polarized and each contact is numbered for correct wiring. Plugs with 4 and 5 contacts have molded finger-grips; units with more contacts have straight sides. Dielectric is general-purpose black phenolic; contacts are nickel-plated brass.

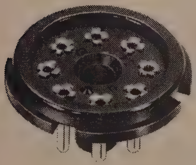
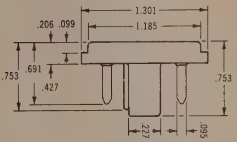
50 SERIES RELAY AND TUBE BASES



50-801

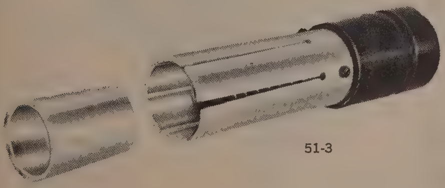


For all standard-size 8- and 11-pin tube/relay sockets. Four notches around circumference of dielectric permit quick staking of relay plate to either 8- or 11-pin plug base. Base is general-purpose black phenolic; contacts are nickel-plated brass. Rated 1250 volts (RMS at sea level), 5 amp.

ORDERING INFORMATION

50-801	8-contact Relay and Tube Base
50-820	11-contact Relay and Tube Base

RETAINER-RING HAND MOUNTING TOOL



51-3

Permits mounting retainer-ring-type sockets, plugs and receptacles to chassis and panels at production-line speeds. For all 78S and 49SS Series Sockets, 86-CP Series plugs and 60, 61 and 160 Series line plugs and receptacles. Requires approximately 6½" minimum clearance to operate.

ORDERING INFORMATION

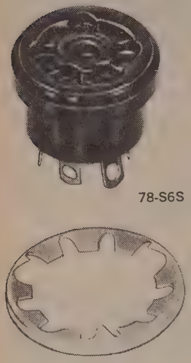
51-3	Retainer-Ring Hand Mounting Tool

FOR LOCAL SOURCE OF SUPPLY SEE EEM VOL. 2 PAGE 462

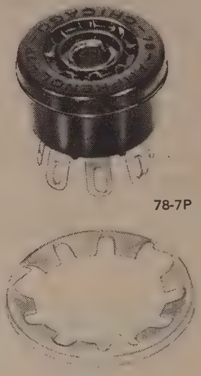
MINIATURE TUBE SOCKETS

BUNKER RAMO AMPHENOL

78 SERIES MINIATURE
with retainer-ring mounting



78-S6S

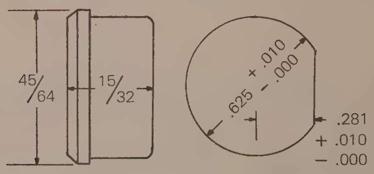


78-7P

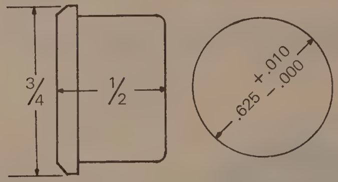
Designed for limited-space applications, these sockets are similar to the 78S Series type, but are less than half their size.

Mount them without screws or rivets in either ⅝" round or, for anti-rotation, in "D"-shaped holes, as shown. One friction-type retainer ring is furnished with each socket and is easily assembled to make rigid, secure mounting. Standard dielectric is general-purpose black phenolic; please specify if mica-filled phenolic is desired. All contacts rated 500 volts (RMS at sea level), 3 amp.

DIMENSIONS AND MOUNTING INFORMATION



Size and mounting hole for No. 78-7P. 78-S3S and 78-S4S.
Laboratory and servicemen can mount socket in plain round hole.



Size and mounting hole for No. 78-S5S and 78-S6S.

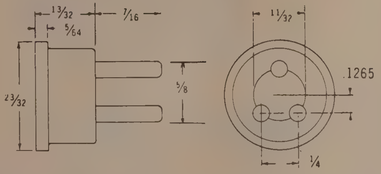
MINIATURE UNSHIELDED PLUGS

SERIES 71 CABLE-END PLUGS

71-3S



Compact plugs are useful for connecting bookshelf and other small-size speakers. Also ideal for all types of plug-in connections where space is limited. Body is general-purpose black phenolic with molded-in nickel-plated brass contacts that will not work loose or get out of alignment. Contacts are deeply recessed in body to prevent shorts from pulled-back insulation. Mate accurately with miniature sockets (preceding page). Rated 500 volts (RMS at sea level), 5 amp.

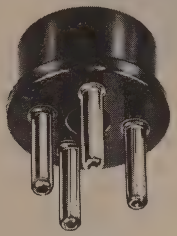
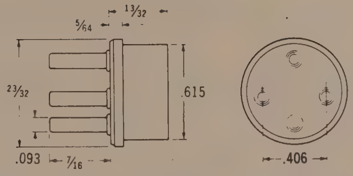
86 SERIES CHASSIS-MOUNT PLUGS



86-CP-4S



Friction-type retainer ring assembles easily and holds plug securely in panel or chassis. Ideal for connecting speakers, carbon microphones, test equipment or other units in limited-space areas.

Plugs are general-purpose black phenolic and mount in 5/8" round hole. Contacts are nickel-plated brass. Rated 500 volts (RMS at sea level), 5 amp.

MINIATURE TUBE SOCKETS

BUNKER RAMO AMPHENOL

7 AND 9-CONTACT MINIATURE SOCKETS

147 SERIES—7 CONTACTS

147 and 59 Series Sockets are designed for all 7- and 9-contact miniature tube applications. They are available with or without tube-shield base or center shield and for either above- or below chassis mounting.

Interchangeable with corresponding military types (MIL-S-12883A). Dielectric is either general-purpose-black or low-loss, mica-filled phenolic. All sockets are rated 500 volts (RMS at sea level), 1 amp. per contact.

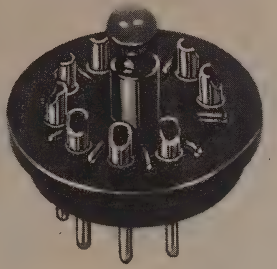
MINIATURE PLUGS

BUNKER RAMO AMPHENOL

86 SERIES MINIATURE CABLE-TYPE PLUGS

to mate with 147 and 59 Series Sockets



These space-saving miniature plugs are especially intended for use with the miniature tube sockets on the opposite page. They are meant for applications where a highly reliable, top-quality plug is required.

86 Series Plugs are molded from blue diallyl phthalate, a superior dielectric material. Contacts are brass, overplated with gold over silver. A center strain-relief post is molded-in to aid in relieving stress on solder connections.

Plugs can be provided with or without rubber plug caps. Caps are available with end cable outlet or side cable outlet. See ordering information below.

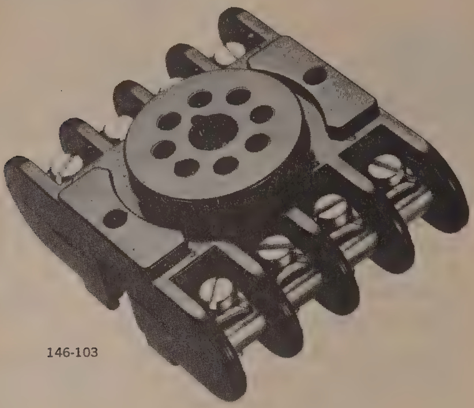
INDUSTRIAL RELAY SOCKETS

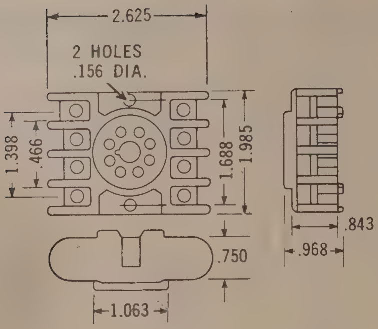
BUNKER RAMO **AMPHENOL**

U/L RECOGNIZED 146 SERIES INDUSTRIAL OCTAL SOCKETS

U/L File no. E 56473



146-103



Many design improvements at no extra cost make these a top value in octal relay sockets. Long screws with captivated pressure plate allow termination of bare wire, solid or stranded, from 20 to 12 AWG without attaching rings or spade-type lugs. The design holds the wire securely and prevents shearing when tightened. The longer screw permits clamping more than one wire or lug without difficulty. Binding screws withstand 45 in.-lb. torque to prevent strip-out when tightening.

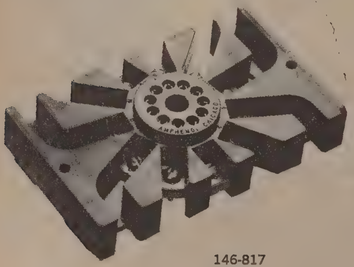
Molded in one-piece phenolic, this relay socket operates dependably despite continuous temperatures of 300°F. Cloverleaf contacts provide 4 lines of contact for minimum resistance and hold the relay in place despite severe vibration and shock. Insulating barriers provide long creepage paths between contacts and ground for utmost reliability, RETMA-numbered terminals. Sockets may be gang-mounted.

A unique design feature permits reversing the screw terminals to allow the socket to be mounted and wired from the bottom. Rated 10 Amp per contact at 1250 volts (RMS at sea level).

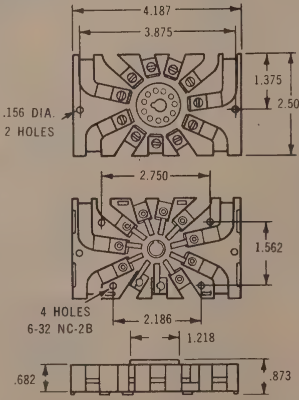
ORDERING INFORMATION

Part No.	Description
146-103	Standard Socket—surface mounted
146-104	Socket with 4 self-tapping screws for tie points—Top mounted
146-203	Same as 146-103 except for bottom mounting
146-204	Same as 146-104 execept for bottom mounting

11-CONTACT INDUSTRIAL RELAY SOCKET



146-817



All the features of the octal socket shown above, with 360° wrap-around contacts instead of cloverleaf type. This socket also has 4 self-tapping screws for tie points. Rated 10 Amps maximum per contact, 600 volts (RMS at sea level).

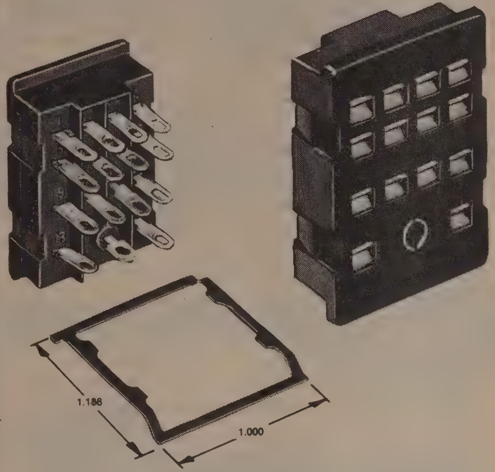
MINIATURE RELAY SOCKETS

BUNKER RAMO AMPHENOL

U/L RECOGNIZED 59 SERIES
14-CONTACT MINIATURE RELAY SOCKETS

U/L File no. E 12869

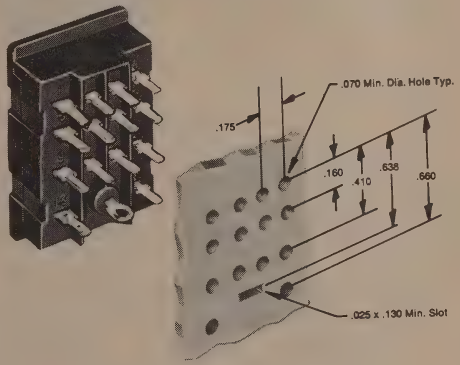


Amphenol's rectangular 14-contact relay sockets are designed for the popular 4PDT general-purpose miniature relay. These sturdy sockets increase flexibility of equipment design and assembly procedures and provide easier testing and servicing. They offer an unusual range of high-quality features at very low cost. Conforming to electronic industry standards, they replace many higher-cost sockets without any modifications.

Sockets are available with either printed-board or solder-eyelet contact tails. A spring-steel mounting clip is furnished with each solder-type socket that makes mounting fast, easy and secure.

An optional relay hold-down spring (P/N 59-1002) permits other than vertical mounting and also assures reliable relay operation in applications where vibration is present. It mounts over the relay and attaches to small notches in the socket flange.

14-contact miniature sockets are ideal for applications that use miniaturized components such as computer and data-processing equipment, business machines, communications equipment, etc.



SPECIFICATIONS

Current rating: 5 amp.
Voltage rating: 250 volts (RMS at sea level)
Contacts: Cadmium-plated brass
Dielectric: General-purpose black phenolic

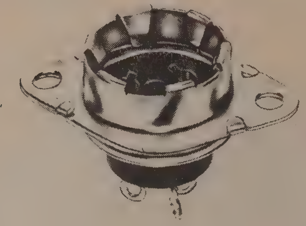
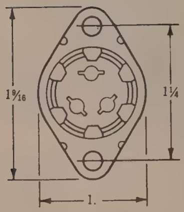
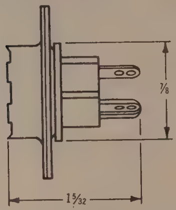
SOCKETS/CABLE CONNECTORS

BUNKER RAMO **AMPHENOL**

78 SERIES SHIELDED-CHASSIS SOCKETS







Consists of a standard 78 Series miniature socket (p. **2**•514), assembled in a cadmium-plated, drawn-steel mounting plate and shield. Spring contacts on shield wipe mating connector shell and assure good electrical continuity between shield, shell and mounting surface. They also hold shell firmly to prevent accidental disconnect. The assembly is sturdily constructed to withstand the action of high-speed riveting machines on production lines.

Mount these 78 Series sockets either on surface or below chassis or panel through ⅞"-dia. hole. Mounting holes are on 1¼" centers.

Use these economical receptacles for either shielded or unshielded cable. Recommended for lower-amperage applications on appliances and test panels; for auto-radio connection; and for audio and RF connections for microphones, speakers and antennas. For a fully shielded connection mate with 91 Series Long-Shell Shielded Plugs below. Rated 500 volts (RMS at sea level) 3 amps. max.

ORDERING INFORMATION

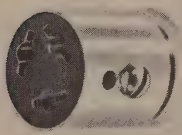
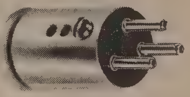
91 SERIES CABLE CONNECTORS





Compact, reliable connectors for either shielded or unshielded cable. Recommended as battery, antenna or inexpensive microphone connectors. Accommodates cables up to ¼" diameter.

Bodies are general-purpose black phenolic, housed in cadmium-plated brass shells held in place by set screws. Polarized contact spacing assures correct insertion. All connectors rated 500 volts (RMS at sea level), 3 amps. max.

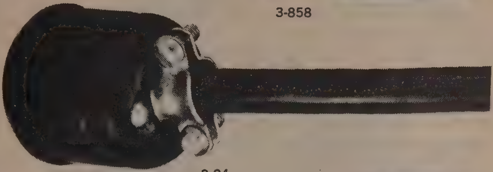
HARDWARE AND ACCESSORIES

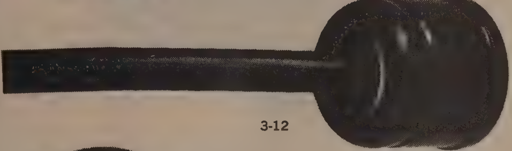
BUNKER RAMO AMPHENOL

3 SERIES SHIELDED END CAPS
for plugs and sockets

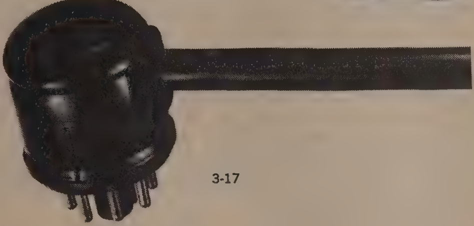
3-858



3-24



3-12



3-17

These sturdy end caps fit all retainer-ring-type plugs and sockets, including 49SS, 60, 61, 78S, 86CP and 160 Series. They provide a protected, attractive cable termination and are intended for applications where connectors must be mated and unmated. Molded thermoplastic caps are two-piece construction for ease of assembly and have molded-in, handy finger-grips to aid mating and unmating. When assembled, end cap is securely anchored to plug or socket. Metal caps quickly snap onto all standard grooved plugs and sockets.

ORDERING INFORMATION

Part no.	Description	Finish	Length
3-10	Steel, no cable outlet, no insulator	Black epoxy	1"
3-12	Steel, end outlet, 5/16" I.D. insulator	Black epoxy	1"
3-13	Steel, end outlet, 7/16" I.D. insulator	Black epoxy	1"
3-17	Steel, side outlet, rubber grommet, 7/16" I.D. insulator	Black epoxy	1"
3-24	Steel, cable clamp for up to 3/8" wire, insulator	Black epoxy	1 7/16"

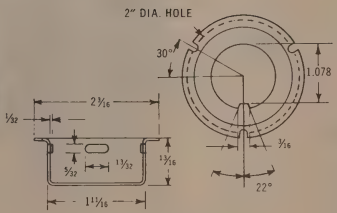
3-CC4	Cable clamp only as used on 3-24 above	Cadmium	—

RECEPTACLE SHELLS



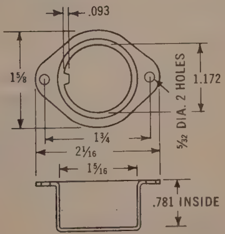
Aluminum shells raise 49SS, 78S Sockets, 86-CP plugs and power-line-type connectors 13/16" above surface of panel or chassis. Permits wiring from top of chassis or panel—knockouts on all 4 sides provide convenient wiring entrances. Mount through 1 3/4" hole; 3 mounting notches accept #6 screws.

ORDERING INFORMATION

61-23	Receptacle Shell

RECESSED-MOUNTING SHELLS

(Recessed Mounting Shell)



Used where flush mounting of standard grooved plugs or sockets is needed. These sturdy cadmium-plated steel shells permit mounting of 49SS, 78S Sockets, 86-CP Plugs and power-line-type connectors 1 3/16" below surface of panel or chassis. Mounts in 1 7/16" hole; is held through two 5/32" screw holes on 1 3/4" centers.

ORDERING INFORMATION

61-61	Recessed Mounting Shell

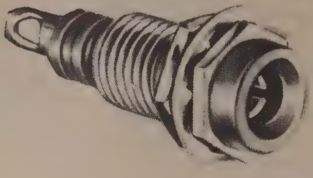
350 SERIES COMMERCIAL TIP JACKS for .080″-dia. plug



350-61001-X

These tip jacks accomodate a wide variety of applications. They are designed to fit .080″-dia. plugs. 9/16″ long and mount through a 1/4″ hole. Seven colors are available for coding — please specify colors desired.

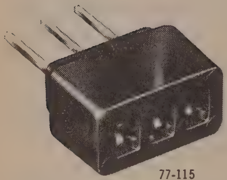
MATERIAL AND ELECTRICAL SPECIFICATIONS

Dielectric: Nylon (Zytel 101)
Mounting Shell: Nickel-plated brass
Hex Nut: Nickel-plated .062″ brass
Lockwasher: Nickel-plated steel
Contacts: Silver-plated beryllium copper
Rated Current: 5 amp.
Rated Voltage: 1000 volts max. (RMS at sea level)
Voltage Drop: 20 millivolts max. at rated current
Insulation Resistance: 5000 megohms min.
Operating Temperature: 256°F max.

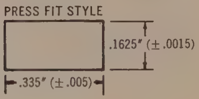
ORDERING INFORMATION

350-61001-X	Commercial Tip Jack (Replace "X" with number for color desired, as follows: —1 Red, —2 Black, —3 Brown, —4 Green, —5 Orange, —6 White, —7 Blue)

77 SERIES SCR SOCKETS



77-115



These inexpensive sockets permit fast, easy installation, withdrawal and replacement of silicon-controlled rectifiers, such as the GE C106 or other equivalent flat-pack SCRs with 3 leads. SCR simply plugs in—no riveting or soldering. Contact tails are for either wire-wrapping or printed-board termination. Socket is designed to be press-fitted into panel cut-out shown or soldered to printed board. Rated 500 volts (RMS at sea level), 5 amps per contact.

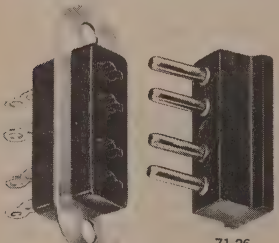
SPECIFICATIONS

Contacts: Nickel-silver, .323″ long and .020″ square. Three contacts on .100 centers with mating depth of .160″.
Dielectric: Black Nylon, type 6

ORDERING INFORMATION

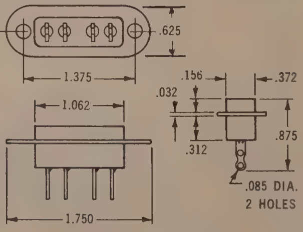
77-115	SCR Socket

4-CONTACT RECTANGULAR PLUG AND SOCKET



71-26

77-26



For many types of compact apparatus. Plugs are frequently used as self-sustaining coil form. Receptacle has molded-in mounting plate. Two .085″ holes in socket contact tail permit easy wiring. Dielectric is general-purpose black phenolic. Rated 500 volts (RMS at sea level), 3 amps per contact.

146 SERIES INDUSTRIAL ANGLE-TYPE SOCKET

146-106

For super-jumbo 4-pin industrial-type tubes. Provides vertical-tube panel mounting, without need for horizontal supporting structure. Sturdy, heavy-wall construction with rugged mounting bracket furnished. Includes retaining clip to hold tube securely during vibration and shock.

ORDERING INFORMATION

146-106	Industrial Angle-type Socket

98 SERIES PREFOCUSED LAMP RECEPTACLE

U/L Listed

98-8

Can be installed in most 8 and 16mm movie projectors using medium-base prefocused lamps and high-wattage floodlights, beacons, etc. without drilling new holes. Rated 1000 watts, 110-250 volts. Heavy-duty contacts continue to assure minimum resistance for maximum light intensity. Special heat-resistant phenolic body withstands temperatures to 450°F; ceramic body is available for higher temperature service. Heavy fiber insulator is included; covers terminals after wiring. U/L recognized.

ORDERING INFORMATION

98-8	Prefocused Lamp Receptacle, Phenolic
98-1	Prefocused Lamp Receptacle, Ceramic

SEE EEM VOL. 2 PAGE 462

91 SERIES EXCELLITE® CONNECTORS

Low-cost, sturdy audio-type connectors with latch-lock couplings that provide easy, positive mating and unmating. Intermateable and interchangeable with both Switchcraft and Cannon XLR type units (see p. **2**•527), they are made of rugged, molded ABS with lustrous nickel plating to permanently retain their handsome good looks. Also available in black, high-impact, unplated ABS for applications that do not require shielding (p. **2**•526). Excellite® Connectors have unusual resistance to denting, chipping, cracking, peeling and tarnishing. They are obtainable in both cable plugs and panel receptacles, all with 3, 4, 5 and 6 contacts, as required. Only Amphenol Excellite Connectors combine all these features.

Save time and money. Cost less to buy initially; save installation time, as well as time for servicing or field repairs if ever required.

Lighter and more rugged. Excellite Connectors are considerably lighter than comparable zinc die-cast units. They also lack the inherent brittleness of zinc to provide longer, trouble-free service.

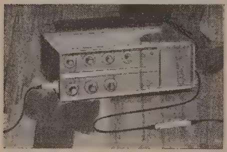
Fool-proof polarization. Key on receptacle and lock-in keying on plug positively prevent accidental mismating.

Positive ground. In all Excellite Connectors, contact #1 engages first and is intended for use as a ground contact. By grounding before electrical connection, possible damage to delicate solid-state equipment or microphones is prevented.

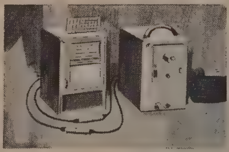
Easier wiring. Shell, button and insert are all one assembly. This unitized insert is easily removed to expose the solder-cup-type contacts to permit quick, positive termination.

TYPICAL APPLICATIONS

Excellite Connectors have a multitude of uses in many types of industrial, commercial and consumer equipment. Among these are:

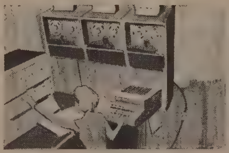


Audio Equipment — microphones, amplifiers, preamps, mixers, speakers, record players, tape decks, recorders, intercoms, 2-way radio, broadcast-studio equipment, sound movie projectors, film-strip projectors, video-recording systems, patch cords.



Test Instruments — analyzers, bridges, comparators, decade boxes, gauges and indicators, meters, standards, test probes, medical-electronics instruments, x-ray equipment, scientific recording and measuring devices.

Control System — counters, detectors, alarms, transducers, servos, photo-electric cells, gauges, timers, regulators.



Other — computer peripheral equipment, educational equipment, nuclear equipment, entertainment systems.

AUDIO-TYPE CONNECTORS

BUNKER RAMO AMPHENOL

91 SERIES EXCELLITE® CONNECTORS

Nickel-plated shells

Material Specifications:

Shell and Cable Clamp — Molded, plateable-grade ABS with bright nickel plate over copper base

Insert Dielectric—Molded Type 6 Nylon

Contacts—Copper-alloy, silver-plated and chromate dipped. Solder-cup termination

Cable Relief — General-purpose 40-60 durometer Neoprene

Mechanical Specifications:

Cable Clamp — Cable clamp and gland accept all commonly used .250″ to .313″-dia. cable. Optional boot for cable from .189″ to .250″ diameter available on special order.

Operating Temperatures—20° to 160°F

Vibration—Conforms to MIL-STD-202 method 204, test condition D

Durability—Withstands 500 coupling cycles without any significant mechanical or electrical effects. Mated pair withstands applied force of 275 lb.

Corrosion Resistance — Withstands standard MIL-STD-202 48-hr salt-spray test without damage or corrosion.

Electrical Specifications

Rated Voltage—133 volts (RMS at sea level)

Rated Amperage—3 Contact, 15 amp.
4 Contact, 10 amp.
5 Contact, 7.5 amp.
6 Contact, 7.5 amp.

Dielectric Withstanding Voltage—1400 volts at 60 Hz for one minute between any two contacts or between any contact and connector shell.

Dielectric Resistance—Exceeds 100 megohms

Contact Resistance—Voltage drop is between 45-55 millivolts at rated current, depending on contact and wire size.

91 SERIES EXCELLITE INTERCHANGEABILITY AND INTERMATEABILITY CROSS-REFERENCE

This cross-reference will assist in selecting Amphenol 91 Series Excellite Connector part numbers for equivalent Switchcraft, Cannon and Amphenol Qwik types. All Excellite Connectors shown are electrically equivalent and mechanically interchangeable to the other types. Excellite part numbers shown are for plated connectors; for unplated types (also intermountable, intermateable, and interchangeable) see opposite page.

1. To replace any of these:			2. Use this Excellite part number		3. All connectors at left intermate with Excellite Part Number:

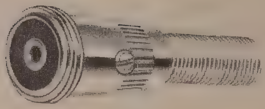
75 SERIES SINGLE-CONTACT CONNECTORS

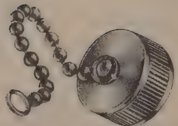
75-PC1M



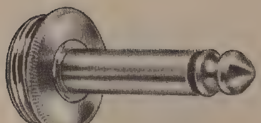
75-MC1M

75-MC1F

75-MC1FA



75-CCC1



75-MC1P

Widely used by leading manufacturers for many types of equipment including amplifiers, transmitters, recorders, speakers, headphones, security alarms, juke boxes, vending machines and other devices.

Shielded-cable-type connector is chrome-plated brass and is practically unbreakable. The threaded ends engage with the coupling to make a physically secure, electrical noise-free and leak-proof connection—the center contacts remain firmly together when mated. Spring cord protectors prevent undue cable flexing and breakage; accept cables up to ¼"-diameter. For grounding to chassis, mount receptacle in .385" hole; .500"-dia. hole for ungrounded two-circuit applications. Receptacle can be screwed directly into housing or stand by means of ⅜"-24 tapped hole.

Use the 75-MC1F straight plug as a cable jack by merely unscrewing the coupling ring and sliding it back over the cord. The 75-CCC1 Cap and Chain is recommended for covering the receptacle to keep it free from dust and foreign matter when not in use.

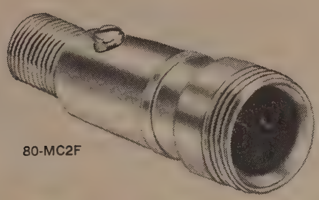
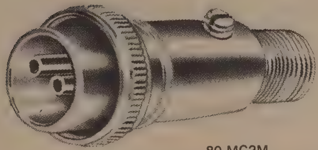
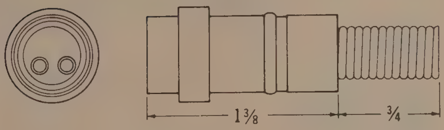
80 SERIES SINGLE- AND DOUBLE-CONTACT CONNECTORS



80-MC2F

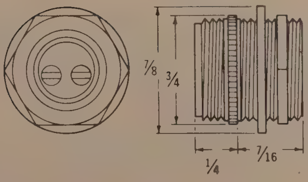


80-MC2M



80-PC2F

80-PC2M



These one-and two-contact connectors have a wide variety of applications such as shielded and microphone cables, twisted pairs, photo-cell leads, patch cords, electronic instruments and similar equipment.

Dielectric is general-purpose black phenolic; shells are attractively finished in polished chrome. Both plugs and receptacles are precision-constructed to assure positive connections free from electrical noise, leaks or shorts.

Both cable plugs and panel receptacles are available with either male or female contacts. All mount through ⅝″-diameter holes. Maximum panel thickness for lock-nut-type receptacle is 11/32″. Threaded housings permit mounting directly on mike body with ⅝″-24 tapped hole for a neat installation. Spring cable guard protects against flexing and wear; accepts cables up to 5/16″-diameter. Cap and chain 75-CCC1 (opposite page) also fits 80 Series Connectors to protect from dust and foreign matter when not in use. Assemblies are polarized to prevent mis-mating. Plug and socket inserts are interchangeable in all shell styles.

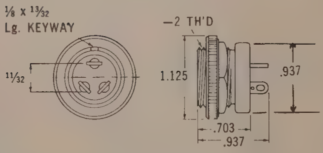
91-PC3M



While these 3, 4 and 6-contact connectors are intended primarily for audio equipment, they are also widely used where components must be connected and disconnected from portable equipment.

The screw-type coupling-ring connection prevents accidental disconnects. A squeeze-type clamp grips the cable firmly after assembly and prevents strain on the soldered terminations.

Dielectric is molded general-purpose black phenolic. Cable shells are finished in high lustre chrome plate. Cord-protector springs for 3-contact style have .281" I.D., 4- and 6-contact types have .385 I.D. Chassis receptacles mount in 27/32"-dia. holes with maximum chassis thickness of 1/8". Their service end accepts either a cable plug coupling ring or the protective cap and chain shown below. All assemblies have keyed polarization to prevent mis-mating.

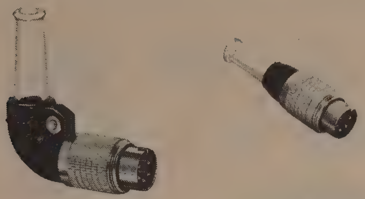
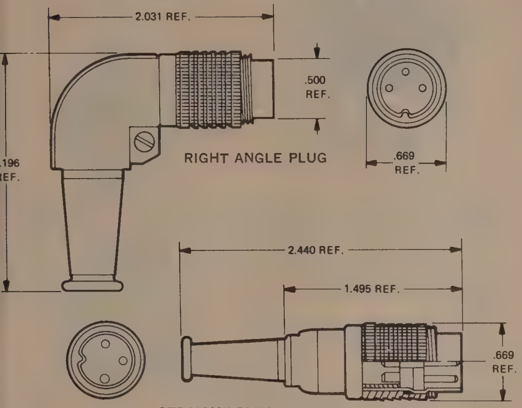
MICROPHONE CONNECTORS

BUNKER RAMO AMPHENOL

91-T SERIES MINIATURE CONNECTORS





RIGHT ANGLE PLUG

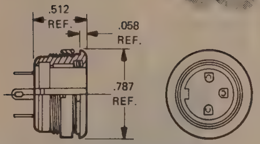
STRAIGHT PLUG

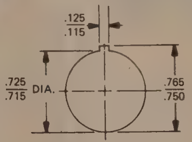
These miniature audio/electronic cable-to-panel connectors are approximately ⅓ smaller than the standard 91 Series coupling-ring connectors shown on the opposite page. Seven styles are available with 2, 3, 4, 5, 6, 7 and 12 contacts. They are useful everywhere a reliable, space-saving interconnection is desired.

Cable plugs are obtainable in either straight or right-angle styles. Both have molded black polycarbonate dielectric insert and bushing; bright nickel-plated shell and coupling ring. Strain relief is clear PVC plastic; accepts cable up to 7/32" O.D. Pin contacts with solder-cup tails are standard. Socket contacts are available on special order.

Panel receptacles have a nickel-plated brass shell and hex nut; dielectric is also black polycarbonate. The receptacle securely mounts in a .720"-dia. keyed panel opening by means of the hex-type nut. Socket contacts with pre-tinned solder-eyelet tails are standard; pin contacts are obtainable on special order.

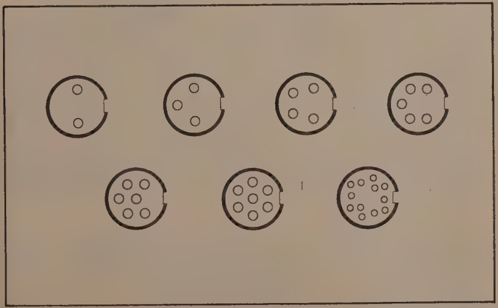
The screw-lock coupling securely holds the connector halves together to withstand shock and vibration to prevent accidental disconnects. Polarization to prevent mis-mating is achieved two ways—by a key in the shell and by contact arrangement.





PANEL CUTOUT

CONTACT ARRANGEMENT



SPECIFICATIONS

Current Rating: 3 amps max. per contact
Voltage Rating: 2-7 contacts incl. 120v. (RMS at Sea Level) 12-contact, 60v. (RMS at Sea Level)
Dielectric: Black polycarbonate
Contacts: Socket—Silverplated phosphor bronze
Pin—Silver-plated brass
Accommodates Wire Size: 20 AWG

POWER-CORD PLUGS

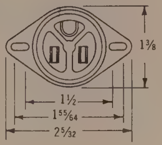
BUNKER RAMO AMPHENOL

U/L LISTED 160 SERIES 2-POLE GROUNDED CONNECTORS

U/L File no. 12869

Dual-rated, heavy-duty plugs and receptacles—for either 15 amp, 125 volt or 10 amp, 250 volt. Meet U/L requirements for grounding home appliances and tools, as well as single-phase industrial equipment. All plugs and receptacles incorporate both terminal screws and solder-eyelet terminations.

WITH MOUNTING PLATE

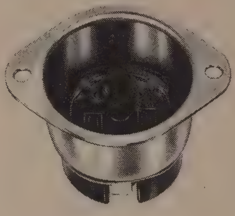


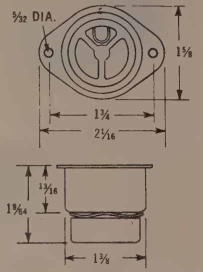
Nickel-plated-steel mounting plate assembled to molded thermoplastic body. Mounting requires 1 9/32"-dia. center hole and two 5/32"-dia. holes on 1½" to 1 55/64" centers. Contacts and grounding prong are brass. Plug is U/L listed. Receptacle is recognized under the U/L component program.

ORDERING INFORMATION

160-2-N	2-pole Receptacle
160-3-N	2-pole Plug

FLUSH MOTOR TYPE



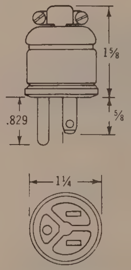


Consists of 160-10 and 160-11 inserts (below) assembled in cadmium-plated steel shells for below-surface mounting. Mount in 1 7/16"-dia. hole with two 5/32" screw holes on 1¾" centers. Plug is U/L Listed. Receptacle is recognized under the U/L component program.

ORDERING INFORMATION

160-4-N	2-pole Flush Motor Receptacle
160-5-N	2-pole Flush Motor Plug

SHIELDED TYPE

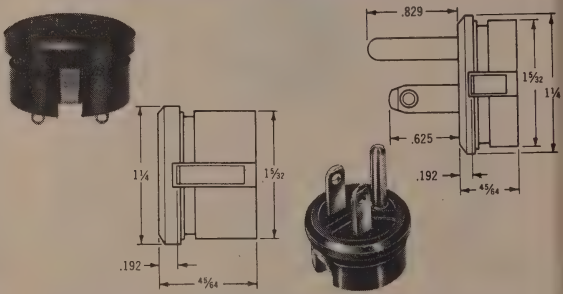


Consists of 160-10 and 160-11 inserts (below) with sturdy steel plug caps finished in black epoxy. Caps are 1 1/16" long. End rubber grommet has 7/16" I.D. Cable clamp fits cable up to 3/8" O.D. All plugs and receptacles are U/L Listed.

ORDERING INFORMATION

160-6-N	2-pole Shielded Receptacle with Rubber Grommet
160-7-N	2-pole Shielded Plug with Rubber Grommet
160-8-N	2-pole Shielded Receptacle with Cable Clamp
160-9-N	2-pole Shielded Plug with Cable Clamp

PLUG AND RECEPTACLE INSERTS



Inserts have high-temperature-resistant thermoplastic bodies with cadmium-plated carbon-steel retainer rings. Contacts and grounding prong are copper alloy. Mount in 1 11/64"-dia. keyed hole. Unless specified otherwise, both plug and receptacle inserts are grooved to fit .031" to .050"-thick panels, but they can be furnished on special order to fit panels or chassis up to .125" thick. Plug and receptacle are **not** U/L approved, since ground connection after installation requires U/L approval.

ORDERING INFORMATION

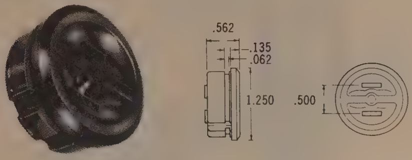
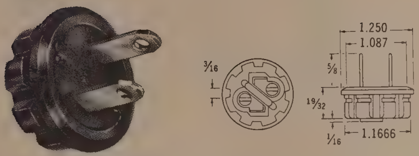
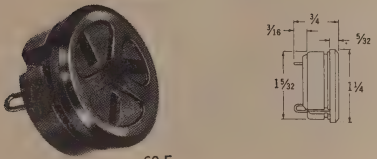
U/L File no. 12869



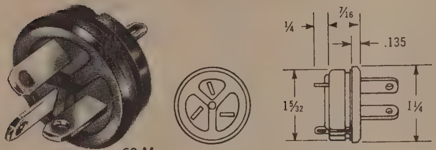
61-F



61-M

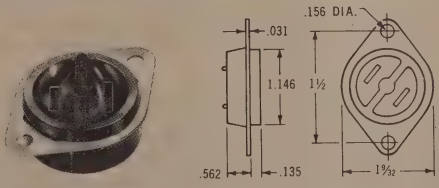


60-F



60-M

MOLDED-IN-PLATE RECEPTACLE



Quality 110-volt receptacle identical to 60-F (above) except that steel mounting plate is molded directly into phenolic body. Mounts in 1 3/16"-dia. hole. Mounting holes are 5/32"-dia. on 1 1/2" centers. Receptacle is at angle to plate for close spacing or vertical mounting.

ORDERING INFORMATION

61-MIP-61F	2-pole Molded-in-Plate Receptacle

PLUG AND RECEPTACLE INSERTS

All dual rated at either 15 amp., 125 volts or 10 amp,. 250 volts and constructed to meet U/L standards. These compact plug and receptacle bodies are ruggedly molded in general-purpose black phenolic. They are available in either retainer-ring or already-assembled mounting-plate types. All sockets have dual termination, with both solder eyelets and terminal screws.

Assemble retainer-ring type plugs and receptacles to panels or chassis with the Amphenol Retainer-Ring Hand Tool (p. **2**•513) or to plug caps (p. **2**•521). They mount in 1 11/64"-dia. keyed holes in chassis. Standard parts are grooved to fit .031" to .050" thick panels but they can be furnished on special order to fit panels up to .125" thick. The mounting-plate style requires a 1 3/32"-dia. hole with holding screws or rivets on 1 1/2" to 1 55/64" centers.

Two-pole receptacles accept all standard 125 volt plugs. Contacts for three-pole receptacles are arranged so that 60-M and 60-M1 plugs can be inserted only one way.

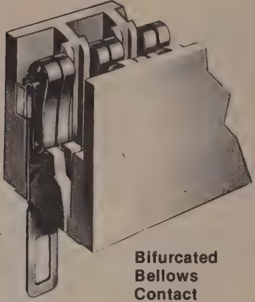
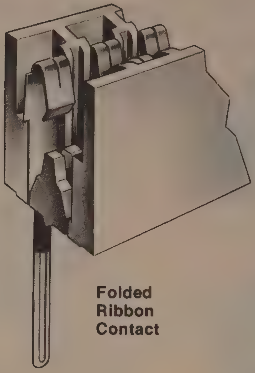
PRINTED CIRCUIT CONNECTORS

BUNKER RAMO AMPHENOL

225 Series



Bifurcated Bellows Contact



Folded Ribbon Contact

Low Contact Resistance

225 Series Connectors assure positive contact with regular or irregular board surfaces. Two types of contacts are employed.

225 Series Industrial and Military Types utilize a bifurcated bellows contact that incorporates two important features—bifurcation and convexity. Bifurcation (slotting) assures two points of contact at all times. The convex face concentrates bearing pressure on the mating surface and assures a positive wiping action that removes semi-conductive films on insertion.

225 Series solder-type Commercial Connectors use a slotted, folded-ribbon contact that flexes into the connector-block cavity on insertion. The wide ribbon provides a large contact area and excellent conductivity.

Excellent Protection for Mating Surfaces

A wide flexing range gives 225 Series contacts in both bellows and ribbon types an extremely low-friction mating with printed circuit surfaces—enables them to withstand repeated insertions and withdrawals. Double plating the contact surface with two dense metals provides protection against wear from hard usage.

Will Not Deform Under Stress

Because these contacts have an excellent compliance, they will not deform or "set" under hard usage. Warped or rocked boards will not permanently deform the contact by squeezing it against a stop and exceeding the elastic limits of the material.

Rugged, One-Piece Connector Body

The industrial- and military-type connector body is molded from flame-retardant diallyl phthalate which is glass-fiber reinforced to resist physical and thermal shock. Commercial 225 Series Connectors are molded from electrical-grade phenolic which gives excellent service in most applications. Both are produced by Amphenol's process of controlled-transfer molding, insuring uniformity and dimensional stability.

The card slot is designed to provide easy guidance for mis-aligned boards and permits fast entry even in blind applications where visual alignment is not possible.

Get Almost Any Combination You Need

Amphenol 225 Series Connectors offer an extreme range of options to meet your individual requirements:

Application Types: Commercial, Industrial, Military

Contact Styles: Removable (Crimp) or permanent; two contact rows for independent opposed circuits or single row for single circuits; two rows bridged for redundant PC boards.

Contact Positions: 6, 10, 12, 15, 18, 22, 25, 28, 30, 36, 43, 50.

Terminations: Solder (closed eyelet; open eyelet; long, medium, short, right-angle dip), Wire-wrappable, Crimp Poke-Home®, Taper Pin.

Contacts: Copper-alloy base metal with .000020 (0,000508) minimum gold or bright tin-lead* over copper flash; Phospor-bronze base metal with .000020 (0,000508), .000030 (0,000762), .000050 (0,00127) minimum gold or bright tin-lead* over copper flash; Beryllium-copper base metal with .000030 (0,000762), .000050 (0,00127) minimum gold over copper flash.

Mounting Provisions: Clearance hole .128 (3,25) and .142 (3,61). Float bushing clearance for #4 screw. Molded-in threaded bushing for 4-40 screw.

Polarization: Between-the-contact keying; over-the-contact keying.

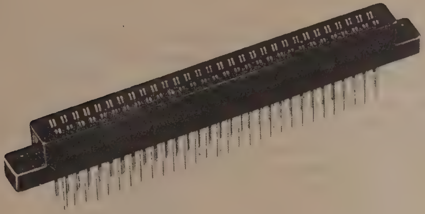
**Bright tin-lead-plated contacts require use of bright tin-lead-plated pads on printed circuit board.*

COMMERCIAL CONNECTORS

BUNKER RAMO AMPHENOL

225 Series

Wire-Wrappable Terminations
Bifurcated Bellows Contacts



AMPHENOL 225 Series Printed Circuit Commercial Connectors with wire-wrappable terminations provide an economical and reliable connector for either automatic or hand-wire-wrapping applications.

Contacts are on a .100 x .200 (2,54 mm x 5,08 mm) or .125 x .250 (3,18 mm x 6,35 mm) grid spacing. Connectors are available in 22-, 30-, 40-, 43- and 50-position models with either grid spacing. The .025 (0,64 mm) square posts will accept a minimum of 3 wraps of #26 AWG wire.

SPECIFICATIONS

Operating Voltage:	600 VAC (RMS) at sea level 150 VAC (RMS) at 70,000 ft.
Current Rating:	5 amps
Dielectric Material:	Electrical Grade Phenolic, Black
Insulation Resistance:	5,000 megohms minimum
Contact Material:	Phosphor bronze plated .000020 (0,000508) min. gold over copper
Contact Resistance:	30 millivolts maximum at rated current
Board Thickness:	.054 (1,37) to .071 (1,80)

POLARIZING KEYS

225-645

Over contact key can be used with 225 Series wire-wrappable connectors on .100 (2,54) and .125 (3,18) centers.

225-594

Between contact key may be used with .125 (3,18) center wire-wrappable connectors.

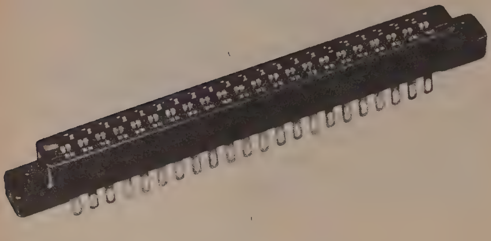
COMMERCIAL CONNECTORS

BUNKER RAMO AMPHENOL

225 Series

Solder Terminations



225 Series Printed Circuit Commercial Connectors with solder terminations are intended for flush installation on printed circuit boards with pads and spacer barriers that permit thorough flux washing.

Four different tail styles provide unusual termination flexibility—one eyelet and three straight tails. The eyelet accepts up to three #20 AWG wires at each terminal; the others are for dip or flow soldering. With 2-tail bridged or common contacts, you can connect 6 wires to one point on a printed circuit board. You can also obtain two 2-tail configurations—one with bridged terminals for single or common-contact (redundant) boards; the other with dual contact terminals for independent opposing circuits.

All dip-solder terminals are designed for .043 (1,09 mm) min. diameter holes.

SPECIFICATIONS

225 Series
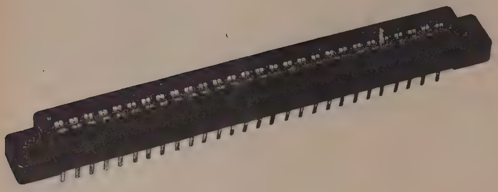
Solder Terminations



Here is real flexibility in termination with six different tail styles—three straight, one right-angle and two eyelet (open and closed) tails. All are intended for flush installation on PC boards with pads and spacer barriers that permit complete flux washing. The straight and right-angle types are intended for dip or flow soldering; eyelet types will accept up to three #20 AWG wires at each terminal.

Two tail configurations include bridged terminals for common-contact PC boards and dual-contact terminals for independent opposing circuits.

SPECIFICATIONS

Operating Voltage:	600 VAC (RMS) at sea level 150 VAC (RMS) at 70,000 feet.
Current Rating:	5 amps continuous.
Dielectric Material:	Glass-fiber-reinforced diallyl phthalate. Type SDG-F per MIL-M-14.
Insulation Resistance:	5,000 megohms minimum.
Contact Material:	All beryllium copper except phosphor bronze for bridged contact with one tail.
Contact Resistance:	30 millivolts maximum at rated current.
Board Thickness:	Accepts P.C. boards .054 (1,37) to .071 (1,80) thick.

Taper Pin and Crimp Poke-Home® Terminations

TAPER PIN TERMINATION

Taper pin terminations provide fast, flexible assembly along with simple circuit modification and repair.

Contacts are fixed in the dielectric material, but wired taper pins can easily be installed, removed and reinserted. Taper pins are securely seated with an impact tool setting of only 13 lb. (5.9 kg.). Average pin retention for the #53 standard pin is 20 lb. (9.1 kg.).

Dielectric is blue dially phthalate only.

CRIMP POKE-HOME® TERMINATION

Here's the economy of crimp termination with the flexibility of removable contacts.

Termination is separate from the connector body—a convenient and time-saving arrangement in many cases. Each contact accepts one #18 or #20, one or two #22 or #24 or two #26 or #28 AWG wires. The wire is crimped and the insulation securely gripped.

Available blue diallyl phthalate or black phenolic (117 deviation).

See opposite page for Amphenol's complete line of crimping accessories.

ACCESSORY TOOLS FOR 225 SERIES CRIMP CONTACTS

356-201 CONTACT REMOVAL TOOL

Permits easy removal of crimp contacts without damage. Allows repairs or circuit modifications without costly unsoldering or replacing connector.

357-550
HAND CRIMPING TOOL

Two-position tool accommodates all 225 Series Crimp Contacts. Contacts are positioned, then locked in the tool to facilitate insertion of the pre-stripped wire. Positive stops and easy contact release prevent contact damage and assure better crimps. First position crimps #18, #20, #22 or two #22 AWG wires. Second position crimps one #24, two #24, two #26 or two #28 AWG wires.

BUNKER RAMO
AMPHENOL

359-205
SEMI-AUTOMATIC CRIMPING MACHINE

Even an unskilled operator can crimp over 1,000 contacts per hour. Simply insert pre-stripped wire into the safety wire-feed slot and press a pedal—the machine does the rest. Contacts are furnished on integral carrier strips in reels of 4,000 for easy, convenient loading. Will crimp one each of #18, #20, #22, or #24, or two #22, #24, #26 or #28 AWG wires.

359-102
PNEUMATIC HAND CRIMPING MACHINE

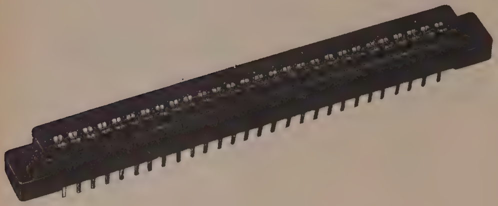
Full-cycle, double-action hand tool assures a positive crimp to required specifications. Crimps 400-500 contacts per hour. Loose contacts are placed in unit, pre-stripped wire inserted and the trigger operated either by hand or optional foot pedal. Can be set to crimp #18, #20, one or two #22 or #24, or two #26 or #28 AWG wires (please specify when ordering). Can be hand held or optionally bench mounted as shown. For bench mount, order 359-102 tool and 359-1000 bench-mount assembly.

FOR LOCAL SOURCE OF SUPPLY SEE EEM VOL. 2 PAGE 462

MILITARY CONNECTORS

BUNKER RAMO AMPHENOL

225 Series
Qualified to MIL-C-21097 C/21



Series 225 PC Connectors that conform to military specifications are available in two solder terminations—solder eyelet and medium tail for dip or flow soldering. Row spacing for the military dip solder connector is .200 (5,08) as opposed to .140 (3,56) for most industrial and commercial connectors.

The solder eyelet termination provides a choice of two tail configurations—a bridged terminal for single or common contacts (redundant) PC boards, and dual contact terminals for independent opposing circuits.

The facing page cross references 225 Series Amphenol part numbers with corresponding MIL-C-21097C/21 numbers.

SPECIFICATIONS

Operating Voltage:	600 VAC (RMS) at sea level 150 VAC (RMS) at 70,000 feet.
Current Rating:	5 amps continuous.
Dielectric Material:	Glass-fiber-reinforced diallyl phthalate. Type SDG-F per MIL-M-14.
Insulation Resistance:	5,000 megohms minimum.
Contact Material:	All beryllium copper except phosphor bronze for bridged contact with one tail.
Contact Resistance:	30 millivolts maximum at rated current.
Board Thickness:	Accepts P.C. boards .054 (1,37) to .071 (1,80) thick.

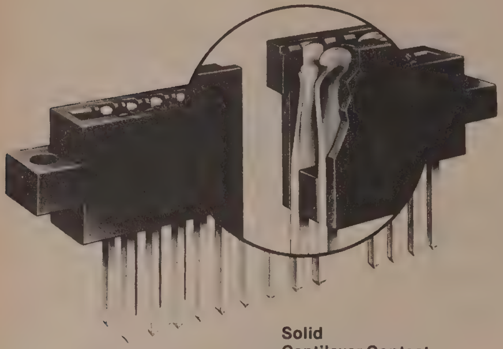
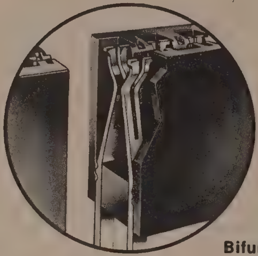
261 Series

Solid and Bifurcated Cantilever Contacts



Solid Cantilever Contact

Accurate Positioning for Solderless-Wrap Termination by hand or on Semi-Automatic Wrapping Machines



Bifurcated Cantilever Contact

These edgeboard connectors provide single or dual readout of double-sided PC boards. Pre-loaded solid or bifurcated cantilever contacts are assembled in the dielectric with precise spacing to permit trouble-free semi-automatic solderless-wrap termination. Low contact resistance is assured by a minimum of .000030 (0,00076) gold at the contact area for the solid contact and .000050 (0,00127) gold for the bifurcated. The solid cantilever contact is designed to provide more than 500 insertions and withdrawal without loss of continuity or significant increase in resistance. Where many insertion and withdrawal cycles are required, the bifurcated contact is recommended.

DEPENDABLE

Both types of contacts will give long service—will not "set" even under repeated use. In addition, there is always a definite contact separation between rows with both solid and bifurcated types to prohibit shorting.

EASY, ECONOMICAL APPLICATION

Close dimensional tolerances minimize mounting and automatic terminating problems. Contacts exert sufficient wiping pressure to break through surface contaminating films and assure good electrical continuity, yet not so much as to damage board lands.

SPACE-SAVING

High contact density—with contacts spaced as close as .100 (2,54) on center—permits a large number of contacts in a small space. In addition, connector blocks can be stacked side-by-side in frames and the connectors back-wired or flow-soldered to a motherboard.

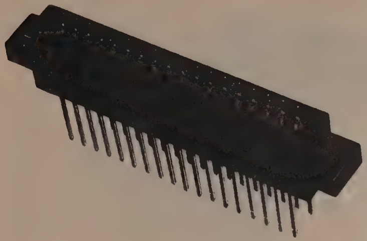
VERSATILE APPLICATION

261 Series Connectors offer a wide variety of sizes, five different contact center spacings, choice of bifurcated or solid cantilever contacts, and large selection in number of positions to make them useful in almost any PC board application. 261 Series Connectors are also available in factory-produced plate assemblies, completely wired, if desired. Contact the factory for full information.

PRINTED CIRCUIT CONNECTORS

BUNKER RAMO AMPHENOL

261 Series



AN EXTENSIVE LINE

- ☐ 15 to 43 positions providing up to 86 contacts
- ☐ Choice of .100 (2,54), .125 (3,18), .150 (3,81), .156 (3,96) or .200 (5,08) spacing
- ☐ Choice of tail sizes: .025 (0,64) sq., .035 (0,89) sq., or .035 (0,89) x .050 (1,27)
- ☐ Solid or bifurcated contacts.
- ☐ Accepts boards .054 (1,37) to .071 (1,80) thick

SPECIFICATIONS

Dielectric Material:	Electrical grade phenolic, medium impact, black.
Contact Materials:	.100 (2,54) and .125 (3,18) centers utilize phosphor-bronze base metal with tin tintalate plate and a Precious Metal Tip (PMT) on the contacting surface. .150 (3,81), .156 (3,96) and .200 (5,08) centers use phosphor-bronze base with copper flash and .000030 (0,00076) min. gold plate overall.
Tail Length:	Sufficient for three wire wraps, plus space for bussing or PC board next to block (see dimension G). Tails may be cut as short as .100 (2,54) at the factory for wave-solder applications.
Polarization:	Polarizing key (P/N 261-70005) may be used on all 261 Series. Fits between contacts on .150 (3,81), .156 (3,96) and .200 (5,08) centers; replaces one pair of contacts on .100 (2,54) and .125 (3,18) centers.

ELECTRICAL CHARACTERISTICS

Contact Spacing	Current Rating (Max.) Amps	Contact Resistance (Max.) Milliohms	Voltage Rating (Sea Level)	Voltage Breakdown (Min.)

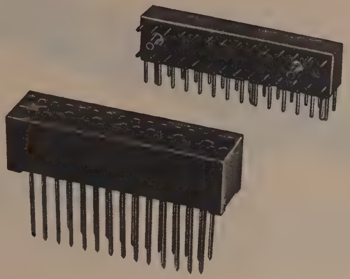
HIGH-DENSITY CONNECTORS

BUNKER RAMO AMPHENOL

127 Series
Box Contacts



PIN AND SOCKET CONNECTORS WITH MIL-C-55302 PERFORMANCE

These compact, sturdy plugs and receptacles are designed for numerous printed circuit applications that require the space-saving advantages of multiple-row direct entry connectors. Though small in size, they provide 28 contact positions to meet the requirements of a wide range of communications, computer, and airborne applications. They also meet or exceed the electrical and physical requirements of MIL-C-55302.

127 Series plugs have molded-in pin contacts with dip solder terminations and two rivets for secure and positive attachment to the printed circuit board. Contacts are spaced at .100 (2,54) intervals on .150 (3,81) row spacing. Three molded-in guide pins and provision for up to five polarizing pins assure correct mating every time.

127 Series receptacles have replaceable socket contacts with solderless wrap or flow solder terminations. The socket contacts provide excellent performance even under conditions of severe physical stress and vibration.

Connector blocks are formed of glass-fiber-filled diallyl phthalate. Contact numbers and guide pin letters are molded prominently on both connectors.

SPECIFICATIONS
(Conform to MIL-C-55302)

Current Rating:	3 amperes, max.
Operating Voltage:	500 VAC(RMS), max.
Dielectric Withstanding Voltage:	Sea Level—1,500 VAC(RMS), 60 Hz High Altitude—750 VAC(RMS), 60 Hz
Contact Resistance:	Less than .010 ohm average for all contact pairs, and less than .020 ohm any individual contact pair.

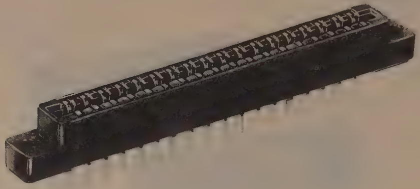
S Receptacle (02 contacts only)

COMMERCIAL AND INDUSTRIAL CONNECTORS

BUNKER RAMO AMPHENOL

133/143 Series



Here are sturdy, reliable, highly-efficient connectors that help prolong the life of printed circuit boards. 133 Series Connectors are essentially male plug adapters for PC boards. They are especially useful in situations ininvolving other than normal 1/16 (1,57 mm) thick PC boards. 143 Series Connectors are receptacles that accept either .054 to .070 (1,37 mm to 1,78 mm) PC boards or 133 Series Plugs.

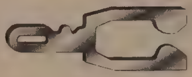
133/143 Series Industrial Connectors are molded from mineral-filled diallyl phthalate. 133/143 Series Commercial Connectors (117 deviation) are molded from mineral-filled electrical-grade black phenolic.

These connectors are manufactured to Amphenol rather than military specifications. They can, therefore, be readily modified to your special requirements. Many combinations of dielectric materials, number of contacts, tail styles, platings and polarization methods are available.

LONG-LIFE, TUNING-FORK-TYPE CONTACTS

The tuning-fork-type contact used for 143 Series Connectors offers an exceptional combination of reliability, durability, versatility and performance. The extra-long spring base of the contact and resiliance of the contact material provide a wide flexing range with sufficient elastic reserve to prevent the contacts from being "set".

Contacts have excellent protection against corrosion through deposition of two dense metals over all contact surfaces—a base plating of copper followed by an overplate of gold.



EASY INSERTION AND WITHDRAWAL

The rounded 143 Series contact surface provides easy, smooth, low-force insertions and withdrawals. Controlled lateral float of the contacts permits the accommodation of warped boards while maintaining positive continuity of all circuits.

UNUSUALLY LOW CONTACT RESISTANCE

The contact spring design assures uniform distribution of contact forces and firm contact action, even on PC boards at the extremes of thickness tolerance. The wiping action of the contact cleans the mating surface to provide more positive contact—and voltage losses are held to a minimum. For example, at 5 amperes, the average voltage drop is less than 25 millivolts.

SPECIFICATIONS

Current Rating:	5 amp
Operating Voltage Rating:	600 VAC (RMS) at sea level
Dielectric Resistance:	5000 megohms min.
Contact Resistance (Voltage Drop):	25 millivolts at rated current
Dielectric Material:	Industrial type – mineral-filled diallyl phthalate per MIL-M-14 Type MDG, color blue Commercial type (117 deviation) – Mineral-filled phenolic, electrical grade, color black
Contact Material:	133 - Brass 143 - Phosphor bronze
Contact Plating:	Standard – .000020 (0,000508) min. gold over copper (101 deviation) – .00010 (0,00254) min. gold over copper Gold Plating is per MIL-G-45204 (Type I on 143 Series, Type II on 133 Series) Copper Plating is per MIL-C-14550, Class 3 (102 deviation) – .000030 (0,000762) min. gold over nickel
Guide Pin Material:	Cadmium-plated brass
End-Cap Material:	Stainless Steel (Passivated)

PLUGS

BUNKER RAMO AMPHENOL

133 Series

Amphenol 133 Series Plugs combine excellent electrical performance with mechanical sturdiness. Repeated matings, even at an angle, will not cause deformation of the rugged contacts. Amphenol's process of controlled-transfer molding assures uniformity and dimensional stability. The assembled body is rigidly held together by the rolled-over ends of the guide pins. End caps prevent damage to mounting holes when mounting screws are tightened. Contact identification is prominently molded into both front and rear body surfaces.

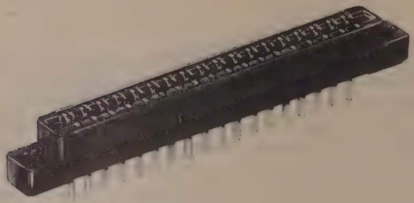
RECEPTACLES

BUNKER RAMO AMPHENOL

143 Series



Even at extremes of temperature and vibration, 143 Series Connectors keep voltage losses at an absolute minimum through the strong, firm action of their tuning-fork-type contacts. With their connector-body design and contact "float", 143 Series Connectors prevent board rocking. In addition, the design assures that warped boards will not affect performance.

Extra-strong contact faces slide readily over the mating surfaces of the PC board and conductivity remains virtually unaffected for at least 500 cycles of insertion and withdrawal. Where more cycling is anticipated, a 133 Series Plug can be attached to the board and mated with a 143 Series Connector.

The molded connector body in either mineral-filled diallyl phthalate or phenolic (117 deviation) is dimensionally stable. It is designed for flush mounting and can be mounted either on the front or rear of the panel. Contact identification letters are molded in both the top face and terminal surface. See page 27 for ordering information.

133/143 Series

ORDERING INFORMATION

To get the specific connector you want, put together the part number as per the following example.

133-015-21-1005-(101)

SERIES NUMBER
133 Plug
143 Receptacle

NUMBER OF CONTACT POSITIONS

Digit Group	No. of Contacts
006-	6
010-	10
012-	12
015-	15
018-	18
022-	22
*028-	28
036-	36

The 28 and 36 position connectors are available only in the 143 Series.

* Also available on .125 (3,18) centers (143-865-XX)

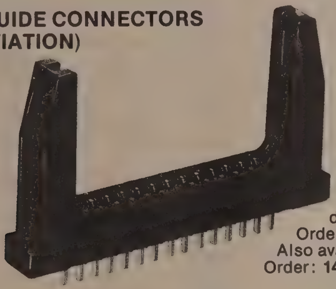
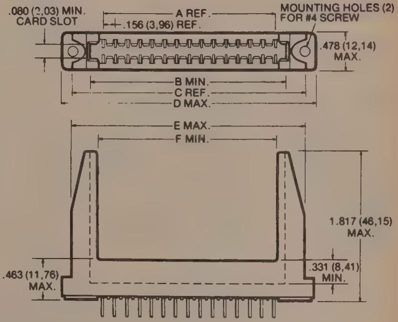
COMMON DEVIATIONS

(101) .0001 (0,00254) min. gold-over-copper contact plating
(102) .00003 (0,00086) gold-over-nickel contact plating
(103) (for plug) End caps and guide pins gold-colored chromate
(107) (for receptacle) stainless-steel float bushings
(109) (for receptacle) green insert glass-filled body per MIL-M-14 type SDG-F
(109) (for plug) stainless-steel guide pins
(110) (for receptacle) card guide, 15, 18 & 22 size only
(111) .000050 (0,001270) min. gold over copper contact plating
(114) (for receptacle) between-contact keying, 15, 18, 22, 28 size only. Order key 143-754 separately
(117) commercial grade. Mineral and flock-filled electrical-grade black phenolic

CARD-GUIDE CONNECTORS (110 DEVIATION)



Blue mineral-filled diallyl phthalate
Order: **143-0XX-XX (110)**
Also available black phenolic
Order: **143-0XX-XX (110)(117)**



Card guides extend 1-3/8" (34,92 mm) above main body of connector. These integral card guides provide positive alignment in blind installations and prevent board rocking. Has .100 (2,54 mm) more block width than standard 143 line. Available in 15, 18 and 22 position sizes with slots between contacts for plastic keys (P/N 143-754) to permit polarization without loss of contacts.

MINIATURE CONNECTORS

BUNKER RAMO AMPHENOL

223 Series Tiny Tim® Connectors

5 TO 33 CONTACTS
POLY CARBONATE OR NYLON CONSTRUCTION

Plug Receptacle
(Relia-Tac Contacts Illustrated)

Exceptional interconnections for circuit modules, either potted-in or surface mounted, and can also be used as micro-miniature rack-and-panel, cable-to-cable, and cable-to-panel connectors.

The positive mating is the result of the snap latch engagement locking device molded into the connector body. Contact identification numbers are also molded in.

Trapezoidal mating faces are used for polarization. Guide pins provide keying. Contact spacing is .100″ on centers on each row.

SPECIFICATIONS

Temperature Range:
−55°C to +125°C
Current Rating:
5 amps
Voltage Rating:
1500 VAC (RMS) at sea level.
375 VAC (RMS) at 70,000 ft.
Dielectric:
Polycarbonate resin. (Nylon also available).

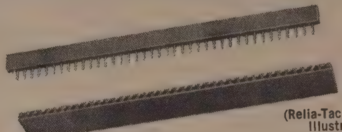
221 Series Strip Connectors

ADAPTABLE TO ANY SHAPE: STACK, CUT, CUT AND STACK, USE AS IS... HIGH CONTACT DENSITY,

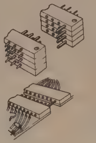


(Relia-Tac Contacts Illustrated)

AMPHENOL Strip Connectors are highly reliable, low cost micro-miniatures with great application versatility. They are furnished in 4″ and 6″ lengths, but you can cut and stack them to whatever configuration you need to satisfy your various application requirements.

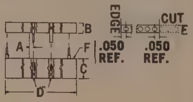
Strip connectors use Poke-Home contacts and perform superbly. Where keying is desired, guide pins are inserted in two or more plug strip contact holes.

Because Strip connectors are injection molded, special configurations can be produced quickly and inexpensively.



Strips can be used in stacked arrangement. Should be stacked parallel only.

PC board application using strip connectors.



CUSTOM LENGTH
Number of holes multiplied by contact center dimension equals approximate length of strip.

Description	A Contact Centers	B	C	D	E	F Contact Positions

Note: Must use 2 digits.

Note: Order Contacts Separately

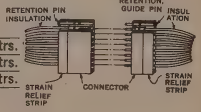
Use Relia-Tac pin contacts for receptacles; socket contacts for plugs.

Strain Relief Strips Protect Wire

AMPHENOL has a solution to the problem of excessive flexing that breaks wire strands in cable-terminated applications. Strain relief strips are available to encase and protect the wire in the crimp area at the rear of the strips. Molded in black Nylon 6/6 material, the strips can be ordered to match any Amphenol strip connector. Held in place by retention pins, which can also be used as a guide pin.

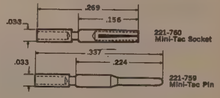
Ordering Information

221-9160—for use with strip connectors on .100 ctrs.
221-9253—for use with strip connectors on .075 ctrs.
221-9380—for use with strip connectors on .050 ctrs.



Mini-Tac Contacts

(Sub-miniature Relia-Tac contacts for .050″ center mini-strip connectors only).
Current Rating: 3 Amps.
Wire Size: 26 to 32 ga. stranded wire.



Poke-Home® Guide Pins

Poke-Home guide pins when seated in plug inserts serve functions of polarizing, keying or connector alignment. They can be used in conjunction with Relia-Tac contacts. Contact factory for information.

Ordering Information

Minimum order quantity is 100 pieces. Contacts can be supplied on reels for use in semi-automatic crimp machines. Contact factory.

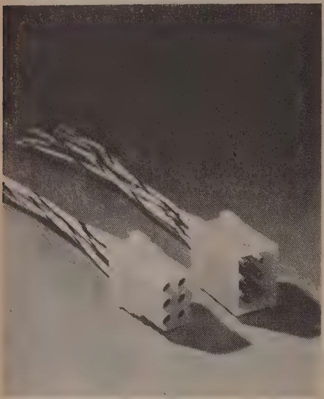
NOTE: All socket contacts are completely shrouded within the plug inserts for optimum protection against damage. Pin contacts are normally exposed when assembled into receptacle inserts.

FOR LOCAL SOURCE OF SUPPLY SEE EEM VOL. 2 PAGE 462

COMMERCIAL ELECTRONIC CONNECTORS

BUNKER RAMO AMPHENOL

32 Series Connectors



- Flame Retardant Material
- Low Cost
- Rugged and Reliable
- 3-6-9-12-15 contact sizes
- Intermateable and interchangeable with competitive connectors
- Panel mount and cable connector styles

Amphenol's Commercial Electronics Connector provides reliable interconnections with real cost saving potential. Low initial procurement cost; automatic crimp contact termination; fast, easy assembly into panels; and quick, simple removal and replacement for field servicing, if necessary. They are ideal for appliances, home entertainment equipment, coin operated machines, business machines . . . anywhere.

The rugged connector housings are single-piece molded nylon meeting UL Class SE-O flammability requirements. Also available in regular SE-2 nylon for greater economy. They are polarized to prevent mismating. Contact wire pockets are recessed to prevent exposed wires and possible electrical failure or shock hazard. Available in 3, 6, 9, 12, and 15 contact sizes. Fully intermateable and intermountable with many competitive types.

Panel mounted connectors have a unique locking feature that provides simple, secure mounting in panels from .032" to .093" thick. A simple push sets the connector automatically, no tools, no struggle. The locking wings hold it firmly in place. If necessary to remove the connector, simple press the locking tab from the rear and the connector slips out. The sturdy wings do not break off or come loose, even after repeated mounting cycles.

To conserve space and improve appearance, cable to cable connectors do not have panel mounting wings. Fully mated connectors lock together to prevent loosening under vibration.

32 Series contacts are furnished on reels for use with high volume semi-automatic production crimping presses, or individually in small quantities for manual wire termination. The contacts can be crimped to 14 through 30 gauge insulated wire. There are three wire barrel sizes to assure the correct combination of wire and contact for the strongest and most reliable crimp termination. Contacts are easily inserted into the housing by hand and locked in place. No tool is required. The contacts can be removed using an inexpensive extraction tool.

The standard-size .093" diameter contacts are completely interchangeable with other contacts. Pin and socket contacts can be assembled in either the plug or the receptacle for quick "hot side" changes or for additional polarization. Normally the pin contacts are used in the plug and socket contacts are used in the mating receptacle.

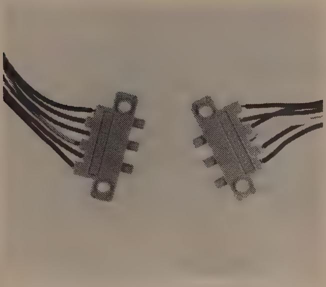
223 Series Hermaphroditic Connector



- Miniature, Modular Connector serves as plug or receptacle
- Six contacts — 3 male — 3 female in each module
- Can be stacked in multiples
- Saves assembly time
- Only 3 parts to stock

Amphenol's new 223 Series Connector features a unique design which serves as either plug or receptacle. Each module houses 3 male and 3 female contacts. Contacts are standard #24 crimp Poke-Home® type. Individual six contact modules can be snapped together to form larger assemblies, if desired.

Only 3 parts need be stocked to perform a multitude of connecting tasks. Assembly is simple, fast and foolproof.

Dielectric is glass-filled thermoplastic. Contacts are copper alloy with gold plating.

Specifications

ORIGINAL POKE HOME & ENCAPSULATED CONTACT

Temperature Range: −55°C to +125°C.
Current Rating: 7.5 Amps.
Voltage Rating: 500 VAC (RMS) at sea level. 150 VAC (RMS) at 90,000 ft.
Dielectric: Zytel 101 nylon per Mil-P-20693.
Shells: Cadmium-plated cold-rolled steel with clear chromate finish.

Contacts: Crimp Type — .00002″ min. gold over copper plated silnic bronze. Solder type — .00002″ min. gold over copper plated brass.
Wire Size: Solder: Up to #20; crimp #20, #22 and #24 AWG.

FIXED CONTACTS and POWER & COAX.

Temperature Range: −55°C to +125°C.
Current Rating: 7.5 Amps.
Voltage Rating: 500 VAC (RMS) at sea level. 150 VAC (RMS) at 70,000 ft.
Dielectric: Glass-filled nylon.
Shells: Same as above.
Contacts: Power; Screw machine type — .00002″ min. gold over copper plated brass. Punch press type — Stamped from phosphor bronze and plated .00002″ gold over copper flash. Wire wrap type — .00002″ min. gold over copper plated brass. .500″ Lg. x .025″ Sq. Coax.; #1 Shielded contacts are gold plated.
Wire Size: Up to #20 wire.

Rear Removable Contacts

Temperature Range: −55°C to +125°C.
Current Rating: 7.5 amps.
Voltage Rating: 500 VAC at sea level. 125 VAC at 70,000 ft.
Dielectric: Glass-filled nylon.
Shells: Same as above.
Contact Type: Crimp Poke-Home, rear insertion, rear release.
Contact Material: Machined contacts — silnic bronze. Strip formed contacts — beryllium copper.
Contact Finish: .000030″ gold over copper plating
Contact Wire Sizes: Machined contacts — 20 to 24 AWG. Strip formed contacts — 22 to 26 AWG.

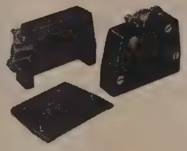
17 Series Min Rac Accessories

Plastic Backshell

A versatile accessory for all Min Rac connectors. Protects connector terminations and provides cable strain relief. Unique removable side panel allows attachment even after cable has been terminated. Can easily be removed for servicing in field. Deep recess accepts all connector styles, even encapsulated and power and coax lines. Interchangeable insert and cable clamp allows choice of top or side cable entry. Made of glass-filled nylon with cadmium plated steel clamp.



Metal Cable Housing

Used to adapt connector for cable to panel or cable to cable applications. Easily attached to connector by two screws. Available in clear chromate or gold iridite finish to match connector shells.

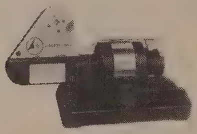
No. 357-552 — Hand Crimp Tool for Coax Connectors

Cycle-controlled hexagon crimp action for reliable termination of outer ferrule of coax contacts. Used for 17-1130 and 17-1132 coax contacts, with RG 178/U cable. (357-100 or 357-104 crimp tool required to terminate center conductor of coax cables.)

No. 357-553 — Hand Crimp Tool

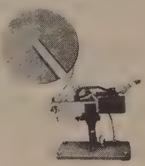
Same as above except for 17-1112 and 17-1113 coax contacts used with RG 195/U cable.

No. 359-400 — Manual Feed, Pneumatic Crimp Tool



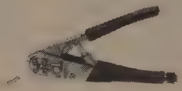
4-indent cycle-controlled crimping tool. Consult factory for correct settings, nest bushings and accessories.

No. 359-900 — Semi-Automatic Feed Crimp Tool



4-indent cycle-controlled crimping. Contacts supplied on carrier strips wound on reel for fast, easy crimping. Consult factory for available contacts and accessories.

NO. 357-104 — HAND CRIMPING TOOL



Miniature step adjustable. Requires contact locator. (See below.)

CRIMPING MACHINES

BUNKER RAMO AMPHENOL

Production Contact Crimping Machine

AUTOMATIC FEEDING, SEMI-AUTOMATIC OPERATION

AMPHENOL
AMPHENOL INDUSTRIAL DIVISION
POWER
FEED

HIGH VOLUME PRODUCTION CRIMPING

Compact, economical, and simple to use, Amphenol's production crimping machine provides automatic contact feeding and semi-automatic operation. The unit produces eight-indent crimped terminations of consistently high quality as fast as the operator can insert the wires and press a pedal switch.

The machine features a vibratory contact feed system that automatically arranges the contacts in the correct crimping position and feeds them to the crimp mechanism. A dependable pneumatic system completes the crimping cycle. Up to four thousand bulk-packaged contacts may be poured into the vibratory bowl at one time, depending on the size and shape of the contacts.

MINIMUM OPERATOR TRAINING

No special skills are required to perform the fast 1-2-3 procedure: insert the wire, operate the pedal switch, and remove the terminated wire. It's as easy as that.

To meet specific applications, the crimp depth adjustment may be preset to accommodate different wire sizes.

SPECIFICATIONS

CRIMPING SPEED: Up to 1600 terminations per hour

CONTACTS: 17-766-02 and 17-763-02

WIRE SIZES: #20 — #24 AWG

DIMENSIONS: 16″ wide x 18″ deep x 14″ high

WEIGHT: 54 lbs.

EXTERNAL AIR LINE: 80 - 100 PSI

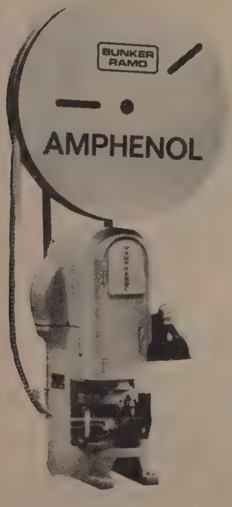
ELECTRICAL POWER: 117V AC, standard 3-wire grounded supply

ORDERING INFORMATION

359-801: For crimping standard 17-766 and 17-763 contacts

Semi-Automatic Reel-Fed Crimping Press

For Stamped and Formed Contacts for 17 and 32 Series



This press is similar to those used to crimp wire terminals. It comes with an applicator designed to crimp Stamped and Formed Contacts on a carrier strip. Capable of operating at over 1,000 terminations per hour, the press firmly attaches Contacts onto pre-stripped wire. Use of the reel-fed press and applicator permits even greater economy from Amphenol's low cost stamped and formed contacts.

SPECIFICATIONS

CRIMPING SPEED: Up to 1,000 terminations per hour.

CONTACTS: 17-1391 and 17-1392 stamped and formed rear release contacts. 32 Series contacts see p. 2•554.

WIRE SIZES: 14 to 30 AWG.

CONNECTIONS REQUIRED: 110 V AC standard 3 wire grounded supply.

ORDERING INFORMATION

359-201: Reel-fed Press and Applicator for 17 Series Stamped and Formed Rear Release Contacts.

359-202: Press and applicator for 32-1416 P or S 0500 RT Contacts.

359-203: Press and Applicator for 32-1620 P or S 0600 RT Contacts.

359-204: Press and Applicator for 32-2230 P or S 10000 RT Contacts.

LOW PROFILE HOOD

All of the advantages of ribbon contacts apply to Micro Ribbon Connectors. This includes the self-cleaning, self-wiping action of the contacts and extremely low insertion and withdrawal forces. Dielectric is improved diallyl phthalate with high impact strength and low moisture absorbency characteristics. Trapezoidal shells provide polarization, and are made of zinc plated brass with a clear chromate conversion seal. Small size makes the Amphenol Micro Ribbon Connector ideal for high density miniature modules as well as rack and panel applications. Connectors may be top or bottom mounted. Rated 700V DC at sea level; 200 VDC at 70,000 feet.

Rack and Panel and Module Applications. Receptacle mounting plate includes float bushings to allow a float of .020 in each direction. This facilitates blind mating and minimizes the need for critical mounting dimensions.

Cable-To-Panel Application. Panel receptacles are equipped with sturdy spring latches which are guided and retained by cutouts in the plug's flanges. Receptacles must be top mounted. Cable entry at top side, as desired.

SPECIFICATIONS

(Meets requirements of SCL-6020A)

Current Capacity — 5 amps per contact.

Voltage Rating — 700 volts D.C. at sea level.
200 volts D.C. at 70,000 ft.

Operating Temperature — −55°C to +105°C
−67°F to +221°F

Wire Sizes — Solid — 22 gauge max.
Stranded — 24 gauge max.

Contacts — .000030″ gold plated over copper flash on cadmium copper base.

Dielectric — Diallyl phthalate per Mil-M-14F Type MDG

Shells — Zinc plated brass with clear chromate coating, trapezoidal shape for polarization. Gold iridescent chromate finish also available.

Tapered design of plug body provides pre-alignment of mating contacts. Dielectric barriers between contacts vary in thickness by minute dimensions to provide polarization. Float bushings allow a float of up to .02 in each direction, facilitating the blind mating common in rack and panel applications. Requires simple rectangular panel cutout.

The eight contact size is also available with a molded key and keyway for polarization. Catalog numbers, 26-182 plug and 26-183 receptacle.

SPECIFICATIONS (Exceed requirements of SCL-6020A)

Current Capacity — 5 Amps per contact

Voltage Rating — 750 volts D.C. at sea level.
300 volts D.C. at 60,000 feet

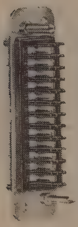
Operating Temperature — −55°C to +125°C
−67°F to +257°F

Contact Plating — .00002″ gold over copper base

Maximum Wire Size — 16 gauge

Plugs and receptacles are molded of high impact diallyl phthalate dielectric with molded-in mounting plates of corrosion resistant passivated stainless steel.

Pin Polarization



26-190-24

26-159-24

Sturdy guide pins pre-align connectors before contact engagement. Pins are of dissimilar size to avoid reverse mating. Float bushings on receptacle allow a float in all directions of .02″ to minimize the need for close mounting dimensions and to assist in blind matings. Rated 5 amperes, 750V DC at sea level; 300V DC at 60,000 feet.

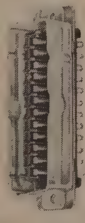
Keyed Shells

26-4201-24P



26-4101-24S

Similar to barrier polarization type, but with keyed aluminum shells to provide a large assortment of alternate positions. Mounting plates are stainless steel and receptacle includes float bushings which allow a float of .02 in all directions. Rated 5 amperes, 800 V DC at sea level; 300 V DC at 70,000 feet.

BLUE RIBBON CONNECTORS BUNKER RAMO **AMPHENOL**

26 Series Cable to Panel and Cable to Cable Types

- **Low Withdrawal Force**
- **Secure Spring Latch**
- **Low Insertion Force**
- **Alternate Positions**
- **Provisions for Safety Wiring**

Cable-to-Panel Blue Ribbon Connectors include a straight plug, right angle plug, and panel receptacle. The plug is equipped with a spring tension swivel latch to insure mating, even in vibration applications. Provision for safety wiring provides additional reliability.

The nickel plated brass shells are notched to provide keying for alternate positions. The large number of alternate positions available is effectively doubled since the plug and receptacles are available with either a male or a female insert. Add P to the catalog number for a male insert; S for a female insert.

RACK AND PANEL CONNECTORS

BUNKER RAMO AMPHENOL

126 Series Miniature Rack and Panel Connectors

Heavy duty, reliable, time proven connectors. Dielectric is of melamine. Contacts are gold over silver plated. Voltage rating of types 1 and 2 is 700V RMS between contacts and 600V RMS between contacts and ground with a current rating of 17 amperes. Voltage rating of types 3 and 4 is 600V RMS with a current rating of 7½ amperes.

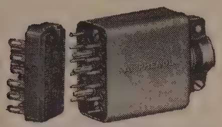
126 Series Rectangular Rack & Panel with Shells For Cable Connections



Rated a full 900V RMS, contacts are gold, over silver. Four contact configurations are available with 3 contact sizes. Contact size 12 is rated 23 amperes; size No. 16 is rated 13 amperes; size 20 is 7½ amperes. Dielectric is mica filled phenolic. Aluminum housing with mechanical strain relief is available for cable applications. Gold over silver plated contacts.

Military Version

A family of miniature connectors which meets MIL-C-8384.

SPECIFICATIONS

Current Rating: 7.5 amps.
Voltage Rating: 500V A.C. (RMS).
Temperature Range: −55°C to +125°C.
Dielectric: Molded epoxy type thermo-set plastic.
Pin Contacts: Brass alloy with gold over nickel plating.
Socket Contacts: Beryllium copper with gold over silver plating.
Guide Hardware: Gold-plated brass with 4-40 thread.
Wire Size: 18AWG solid - 20AWG stranded.

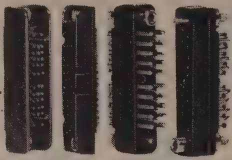
RACK AND PANEL CONNECTORS

BUNKER RAMO AMPHENOL

126 Series

Micro Miniature Rectangular

This group of four connectors provides more contacts in less space than the 126 Series miniatures. A unique spring type socket contact is used which provides excellent wiping action and firm pressure on 6 points along the pin to insure a positive electrical connection everytime.



SPECIFICATIONS

Current Rating: 3 amps.
Voltage Rating: 60 volts. A.C. (RMS)
Temperature Range: −55°C to +125°C.
Dielectric: Molded epoxy type thermo-set plastic.
Pin Contacts: Brass alloy with gold over nickel plating.
Socket Contacts: Beryllium copper with gold over silver plating.
Guide Pins: Nickel-plated brass.
Wire Size: 22 AWG solid. 24 AWG stranded.

Cable Connector

SPECIFICATIONS

Current Rating: 3 amps.
Voltage Rating: 380V. A.C. (RMS)
Temperature Range: −40°C to +85°C.
Dielectric: Black nylon thermo-plastic.
Pin Contacts: Brass alloy with silver plating.
Socket Contacts: Phosphor bronze with silver plating.
Wire Sizes: 18 AWG solid. 20 AWG stranded.
Housing: Gray polycarbonate plastic.

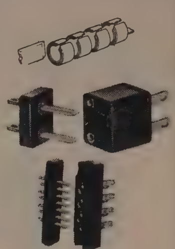
115 Series Blade & Spring Contact Line

A complete line of rugged connectors utilizing a flat blade male contact and a female spring contact with multiple rows of gripping fingers. The blade enters the opening in the "C" shaped spring, forcing it apart.



SPECIFICATIONS

Current Rating: 10 amps (2 contact model, 8 amps).
Voltage Rating: 2, 6, 8 contacts 125V. A.C. (RMS). 4, 7, (8 with guide pins) 12, 16, 30 380V. A.C. (RMS). 26 contact 127V. A.C. (RMS).
Temperature Range: −20°C to +85°C.
Dielectric: Black phenolic.
Pin Contacts: Flat brass blade with silver plating.
Socket Contacts: Phosphor bronze with silver plating.
Wire Size: 16 AWG solid. 18 AWG stranded.

115 Series Hinge Action Mating

115-31S 115-30P

Amphenol 115 Series connectors accommodate 50 or 100 No. 16 wires and are nominally rated at 750 volts RMS 60CPS at sea level.

The vise action of the screw lock provides the leverage for easy attaching and disengaging of the plug. The two-piece inserts have molded-in numbers to facilitate wiring and checking of circuits.

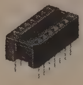
PRODUCTION SOCKETS

BUNKER RAMO AMPHENOL

Dual-In-Line IC Production Sockets

The 821-25, 821-20 and 821-40 Series are high reliability production mounting sockets for Dual-In-Line I.C. devices. They are most useful in production applications where it is desirable to provide easy replacement of individual DIP devices without the risk of unsoldering them from P.C. boards or the expense of replacing entire boards.

Standard Profile DIP Sockets



Standard profile sockets have replaceable, one piece contacts with dual-wiping action for round or flat I.C. leads. Removable lid provides closed entry and chamfered lead-in. Available in anti-wicking solder tab or solid square post for solderless wrap termination.

SPECIFICATIONS

Contact Material: 30 micro inch gold over 50 micro inch nickel over phosphor bronze

Contact Resistance: 5 milliohms

Contact Rating: 1 amp

Voltage Breakdown: 1800 volts

Terminations: Choice of solderless wrap with up to 3 complete wraps of 30 AWG wire, short solderless wrap for 2 wraps, or solder tab.

Body Material: Molded glass filled nylon

Temperature Rating: —55° to +125°C

Mounting: Press fit, hex nut and screw, direct solder, or epoxy

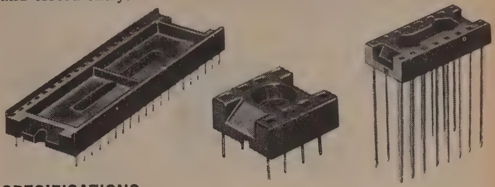
Low Profile DIP Sockets

Designed for low cost, reliable, high density connections. Overall height is only .160″ above board, allowing closer stacking. Also permits side-by-side mounting on .100″ x .300″ and with no wasted space between sockets. Large sockets include lead guides and closed entry.



SPECIFICATIONS

Contact Material: 30 micro inch gold over 50 micro inch nickel over phosphor bronze, or beryllium copper

Contact Resistance: .005 ohms

Contact Rating: 1 amp max.

Voltage Breakdown: 1800 volts

Terminations: Choice of solderless wrap with up to 3 complete wraps of 30 AWG wire, or solder tab

Body Material: Molded glass filled nylon

Temperature Rating: —55° to +125°C

Mounting: Press fit, hex nut and screw, direct solder, or epoxy

Mating Leads: Contacts accept standard IC leads up to .024″ square, rectangular or .024″ diameter

- For Leadless MOS/LSI Planar Packages
- 40 Contacts — Chip up or Chip down
- Unitized Construction — no hardware or tools needed
- Improved performance at lower total cost

SPECIFICATIONS

Temperature Range: −65°C to +125°C
Voltage Rating: 500V DC at sea level

Amphenol's Planar Plug-in Connector provides a low cost, reliable means of interconnecting 40 contact leadless MOS/LSI planar ceramic packages. The IC packages are held firmly but gently, with excellent electrical contact, yet can easily be removed and replaced, for field servicing.

Planar I.C. packages cost less, offsetting the cost of the connector, a net reduction in total system cost.

The PPI Connector can be soldered to the board by automatic, high speed production processes without danger to delicate I.C. devices. Insertion of the package is fast and easy, requiring no force or effort.

The hinged lid is permanently attached to the glass-filled nylon body. No screws or clips. Latch allows the lid to snap into place, hold firmly and pop open without tools. Contacts are located on .100" centers and .600" row spacing. The chevron shaped contact tails are .150" long and fit into a .042" diam. plated hole. Eight standoffs provide .020" clearance.

Current Rating: 1 amp per contact
Dielectric Material: Glass filled nylon
Contacts: Beryllium copper alloy
Plating: .000020" gold over .000050" nickel
Device Accepted: 40 contact leadless ceramic package

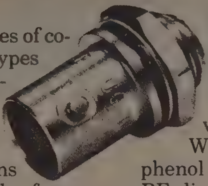
FOR LOCAL SOURCE OF SUPPLY SEE EEM VOL. 2 PAGE 462



We stock more than 1,000 different types of coaxial connectors. From low-cost UHF types to the latest MIL-C-39012 designs. Subminiature SMA and SUB-Minax 27 Series, BNC, TNC and N Series.

But if that doesn't solve your problem, we've got more designs and options available than anyone else. Our vast file of engineering drawings and design variations means that a call to us can literally put you in touch with as many as 90,000 different microwave interconnections. And if you still need something special, we'll custom-design it for you.

We mean business. Call your local Amphenol sales office, distributor or Amphenol RF division, Bunker Ramo Corporation, Danbury, Connecticut 06810. 203/743-9272.

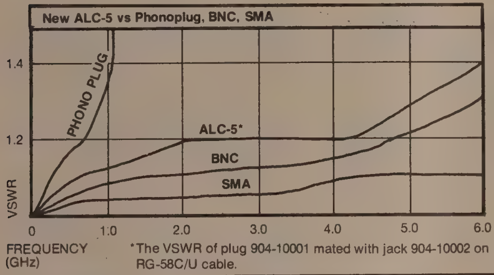
New Cost Efficient Sub-Miniature Coax Connector...the ALC-5

Here is the first sub-miniature connector family (under 1″ long mated) to combine low price with top performance. Designed for medium to high frequency mobile radio, test equipment and telecommunications applications, the ALC-5 rivals the phono plug in assembled cost and the SUB-Minax 27 Series in size and low reflection performance. VSWR for a mated pair with 2′ of RG-58C/U cable is less than 1.22:1 at 1 GHz and under 1.40:1 at 6 GHz.

All ALC-5 cable connectors are crimped to cable. Center contact can be crimped or soldered making possible the use of automated procedures eliminating time-consuming soldering. Hand crimp tools are available incorporating both outer ferrule and center contact dies.

You may have your choice of push-on or snap-on style mating. And, because of the universal design of the ALC-5 jack and receptacle mating faces, they can either slide or lock into position depending upon the plug chosen.



*The VSWR of plug 904-10001 mated with jack 904-10002 on RG-58C/U cable.

ELECTRICAL

Impedance	50 Ohm nominal
Frequency	0-6. GHz
Voltage Rating	500 VRMS
Dielectric Withstanding Voltage	1500 Volts RMS
VSWR typical mated cable assemblies	0 -2. GHz 1.20 2.-4. GHz 1.25 4.-6. GHz 1.40
Insulation Resistance	500 Megohms

ENVIRONMENTAL

Thermal Limits	−67° to 390°F (−55° to 199°C)
Shock (Snap-ons)	MIL-STD-202 Method 107

MECHANICAL

Mating	Push-on or snap-on
Cable affixment to braid or jacket	Crimp
Cable affixment to center conductor	Crimp or solder
Captivated contact	Yes

RF CONNECTORS

BUNKER RAMO AMPHENOL

Subminax 27 series connectors are constant impedance (50 or 75 ohm) types with a voltage rating of 500 volts peak and a frequency limit of 10GHZ.

Two types of coupling mechanisms are available: snap-on (push-on) for frequent fast mating and limited space; and screw-on, for vibration type applications, or where maintaining contact is critical. The two types do do not intermate nor do 50 and 75 ohm types intermate.

AMPHENOL SUBMINAX 27 Series adapters quickly convert standard or improved type BNC and TNC plugs and jacks into between series adapters. The adapter replaces the contact and braid clamp in connectors with standard-type clamping parts. In the improved versions, the adapter replaces the contact and washer. No solder or crimping is required . . . modification is quick and easy.

RF CONNECTORS

BUNKER RAMO AMPHENOL

SMA SERIES

SMA's are 50 ohm, semi-precision, subminiature (3mm), high-frequency (0-18 GHz) connectors with ¼-36 threaded coupling. They meet all MIL-C-39012 requirements for SMA connectors and are available in stainless steel or beryllium copper.

CABLE CONNECTORS/Stainless Steel

STRAIGHT PLUG
P/N 901-9183-1

A unique solder-type plug for copper jacketed cable. It is extremely short, designed for applications where space is critical and minimum bend radius is required. This connector uses the cable center conductor and TFE insulation as its mating face.

RF CONNECTORS

BUNKER RAMO AMPHENOL

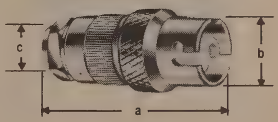
MB SERIES

MB series are very small bayonet-lock connectors which are used with subminiature and miniature cables. These connectors offer good electrical and mechanical performance at low cost. They are non-constant impedance connectors and have a peak voltage rating of 500 V and a frequency limit of 500 MHZ.

Solderless contacts are available in some connectors, as noted and are merely assembled to the center conductor (friction fit).

Crimp designs are offered which require only a simple pair of standard pliers for the crimping operation.



STRAIGHT PLUGS

Non-constant impedance • Female contacts • Non-weatherproof

NEW ISOLATED BNC RECEPTACLE

BNC SERIES

AMPHENOL
P/N 31-010

APPLICATION NOTES

Amphenol's new BNC receptacle, part number 31-010*, was designed for applications requiring isolation of the cable braid from the chassis ground. Dimensionally equivalent to the popular UG-1094/U and UG-1094A/U receptacles, the new 31-010 unit has a molded thermoplastic body which prevents metallic contact between the body of the connector and the panel. An extra contact, i.e., braid grounding tab, is molded into the insulating body and provides a convenient means by which the cable braid can be neatly secured and connected directly to the connector outer conductor, thus bypassing the mounting panel or ground.

Installations of this type usually employ the standard UG receptacle noted above separated from the surrounding panel by a special insulating bushing and washer. In addition to the extra parts to be purchased and handled, an oversize, non-standard hole must be cut in the panel to accommodate the larger diameter of the insulating bushing accompanied by an appropriate reduction in allowable panel thickness.

ADVANTAGES

The new 31-010 incorporates many economies: lower initial cost, nearly equal to that of the standard UG-1094/U and one fourth the cost of functionally equivalent types, plus lower installed cost. And, once installed, the assembly will have a more workmanlike appearance coupled with the convenience of silver plating on parts involving solder operations and long life luster of Amphenol's tarnish-free finish, ASTROplate, on all other external metal surfaces.

Your equipment will look better longer, and your component cost will decrease dramatically... Specify Amphenol's 31-010 isolated BNC receptacle. Contact your local Amphenol sales office, distributor or the factory direct. Available for immediate delivery.

ELECTRICAL

Impedance	Non-Constant
Voltage Rating	500 Volts peak

ENVIRONMENTAL

Thermal limits	−50° to 250°F −45.6° to 121°C
Shock	MIL-Std-202 method 202
Vibration	MIL-Std-202 method 204 (test cond. D)
Moisture Resistance	MIL-Std-202 method 106
Corrosion	MIL-Std-202 method 101 (test cond. B)
Altitude	MIL-Std-202 method 105 (test cond. C)

MECHANICAL

Mating	2-stud bayonet lock
Cable Affixment	See Illustration
Terminal Style	Solder Cup
Panel Mounting	Front Mounted (torque of 12 inch-pounds max. may be applied to hex nut)
Lockwasher	Internal Tooth

MATERIAL & PLATING

Threaded Rear Body & Connector Insulation (one-piece construction)	White, thermoplastic, UL Class SE-1 flammability rating
Center Contact	Beryllium copper, silver plated
Braid Grounding Tab	Brass, silver plated
Other Metal Parts	Brass with ASTROplate

BRAID GROUNDING TAB CONNECTS CABLE BRAID THROUGH INSULATING MATERIAL TO CONNECTOR OUTER CONDUCTOR. CHASSIS AND BRAID ARE ELECTRICALLY SEPARATE.

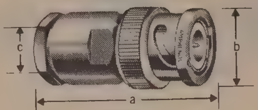
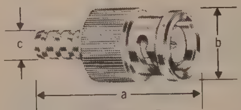
RF CONNECTORS

BUNKER RAMO AMPHENOL

BNC SERIES



CLAMP TYPE
(TYPICAL UG STANDARD)
(IMPROVED)



CRIMP TYPE
a DIM. INCLUDES OUTER FERRULE NOT SHOWN ON ILLUSTRATION

BNC connectors are small, light in weight, and have a quick disconnect bayonet lock coupling arrangement particularly useful for test equipment.

CRIMP TYPE

MIL-Crimps are recommended as the optimum BNC connector, giving optimum operating performance at low installed cost. Using standard crimping tools, these units can be assembled in a fraction of the time usually required for braid clamp type connectors by eliminating critical assembly and soldering operations and reducing the parts to handle. These connectors are weatherproof and have completely captivated gold-plated contacts.

IMPROVED TYPE

Constant 50 ohm impedance connectors which provide excellent performance through X-band frequencies. Mechanically sturdier than unimproved types. The improved clamping mechanism utilizes a threaded nut, flat washer, "V" groove gasket and peaked braid clamping, providing a superior metal-to-metal clamp.

CLAMP TYPE (UG-STANDARD)

Non-constant impedance connectors that can be used effectively at lower frequencies (below 300 MHZ) where no serious mismatch is introduced by the connectors. The clamping mechanism utilizes a threaded nut, flat compression gasket and a tapered braid clamp.

* Patent Pending

RF CONNECTORS

BUNKER RAMO AMPHENOL

TNC SERIES

Threaded coupling TNC Connectors are designed for aircraft, missile and other applications in which extreme vibration may be encountered. They are small, weatherproof types and have a constant impedance of 50 ohms.

Mil-Crimps are recommended as the optimum TNC connector, especially for high-volume production assemblies. They are designed to give maximum operating performance at lowest possible installed cost. These units assemble in a fraction of the time normally required for standard braid-clamp type connectors by eliminating critical assembly and soldering operation and reducing the number of parts to handle. The cable retention of the crimps are superior to the field serviceable types.

MHV SERIES

Bayonet-lock coupling MHV series connectors are small, high voltage types which may be used up to 5000 volts peak at frequencies up to 50 MHZ. Impedance is non-constant. These series are similar to the BNC series; however, they are not designed to intermate.

FOR LOCAL SOURCE OF SUPPLY SEE EEM VOL. 2 PAGE 462

RF CONNECTORS

BUNKER RAMO AMPHENOL

Threaded coupling UHF series are low-cost, general purpose connectors used in applications at lower frequency where no serious mismatch is introduced. They will operate satisfactorily at frequencies up to 300 MHZ and have a peak voltage rating of 500 volts.

While most UHF Connectors have conventional solder-type cable affixement, Quick-Crimp* connectors feature Amphenol's patented hex crimp design which permits faster, easier and more reliable assembly.

Except as noted, UHF connectors have small size bodies; large sizes are noted, and will **not** mate with the small connectors.

* U.S. Patent 3,054,981

Series N connectors are medium size, weatherproof, threaded coupling units with a frequency limit of 11GHZ. They have a peak voltage rating of 1500 volts and are impedance matched to either 50 or 70 ohm cables as listed.

Clamp type as well as crimp type designs are available.

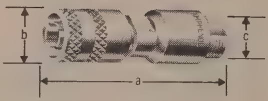
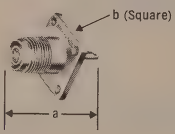
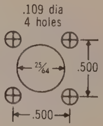
BN SERIES







MTG. HOLE

Threaded coupling BN Series connectors are used in video, trigger-pulse and other low-power RF applications. They are not recommended for use at frequencies above 200 MHZ. They may be used at peak voltages up to 250 volts. Impedance is non-constant.

STRAIGHT PLUG/Rexolite Insulation • Male Contacts • Weatherproof

RF CONNECTORS

BUNKER RAMO AMPHENOL

SC SERIES

Series SC are medium size, weatherproof constant 50 ohm impedance connectors with threaded coupling. Standard connectors have a peak voltage rating of 1500 volts and provide good electrical performance up to 10 GHz.

These connectors are manufactured to M39012/35 meeting mechanical and electrical requirements of Limited Coordination Specification as generated by the Air Force.

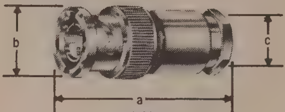
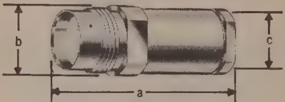
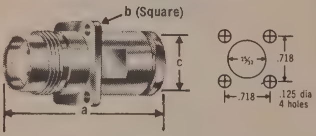
UHF-TYPE

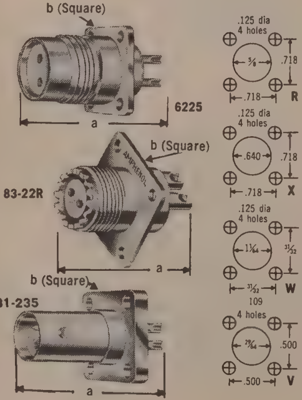


31-224
BNC-TYPE



6975





TWIN CONTACT connectors are used with 78 and 95 ohm twin conductor cables. These connectors are generally used in balanced low level and high sensitivity circuits, due to the improved shielding characteristics possible (> 30 db).

Three different constructions are available. They do **not** intermate.

TWINAX — Has polarized key and keyway construction. Frequency limit is 200MHZ and voltage rating is 500 volts peak.

UHF TYPE — Non-polarized, these connectors provide an inexpensive connecting device for laboratory and radio equipment devices. Frequency limit is 200MHz and voltage rating is 500 volts peak.

BNC TYPE — These connectors utilize a polarized contact design in which plugs and mating receptacles each have one male and one female contact. Frequency limit is 100MHZ and voltage rating is 100 volts peak.

	—	1 5/32	9/16	.255	Teflon	Contact Polar.	S	1 Male, 1 Female Cont.	31-2226

Mating Notes:

31- prefix plugs (BNC-type) mate only with receptacles and adapters bearing the same prefix.

83- prefix plugs (UHF-type) mate only with receptacles and adapters of the same size; i.e., "small" or "large" as indicated in "exceptions/notes" column.

All other plugs (TWINAX) mate with jacks/receptacles/adapters possessing the same polarization as indicated in "polarization" column.

Mating Notes:

31- prefix plugs (BNC-type) mate only with receptacles and adapters bearing the same prefix.

83- prefix plugs (UHF-type) mate only with receptacles and adapters of the same size; i.e., "small" or "large" as indicated in "exceptions/notes" column.

All other plugs (TWINAX) mate with jacks/receptacles/adapters possessing the same polarization as indicated in "polarization" column.

TRIAX

TRIAX connectors are used in transmission line applications where maximum RF shielding and minimum noise radiation are required. They are used with triaxial cables. These connectors have an impedance of 50 ohms, but can be used, and are so listed, with 75 ohm cable where impedance matching is not critical. Connector mating ends have different threading, as listed, and will not intermate. Frequency limit is 10GHZ and voltage rating is 1900-5000 volts depending on cable being used.

R F CRIMP TOOLS

Amphenol crimp connectors incorporate the latest technique in connector design, and are readily available in many series. Amphenol MIL-Crimps are the highest quality crimps available and are presently offered in the N, BNC and TNC Series. In addition to providing superior performance, Amphenol crimp connectors are quick and easy to assemble. Using standard crimping tools, they assemble in approximately one-tenth the time normally needed for connectors requiring conventional cable clamping techniques. Crimp force is controlled automatically by the tool. Tedious braid combing, trimming, forming operations and soldering are eliminated as is the need for a specially skilled operator. Connectors are assembled uniformly from day-to-day and from worker to worker. Most of these connectors are also designed and tested to the applicable military specifications, including MIL-C-39012, the military specification which will eventually obsolete most existing RF connector specs.

In general, cable retention is significantly improved through the use of back-end crimping. This is most frequently accomplished by crimping directly to the cable braid rather than the cable jacket. Crimping to the braid also assures improved electrical conductivity of the cable shield to the connector. Most braid crimps are of a hex configuration. Crimping of center contacts provides equally fast assembly and in many cases provides SWR results equivalent to those of soldered contacts. Most center contact crimps are of a four-indent configuration, although center contact hex crimps are also available.

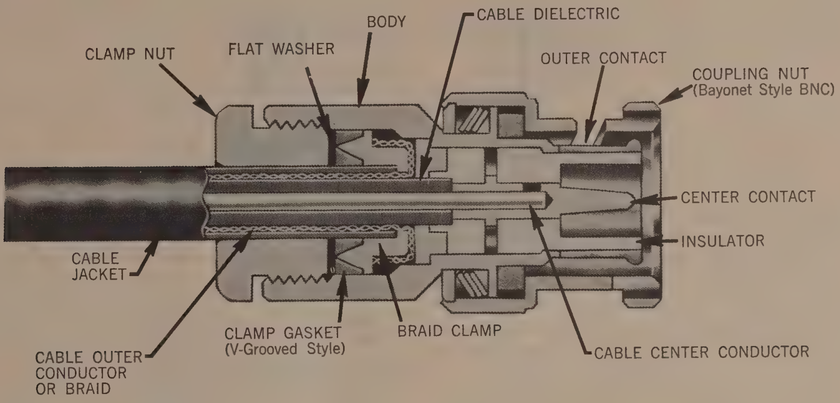
COAXIAL CONNECTOR SELECTION & ASSEMBLY

THE VITAL LINK TO TOP PERFORMANCE

When selecting connectors, there are several important considerations: the physical and electrical size of the cable; the connector type, mating interface or coupling style; and, finally, the method of cable retention and assembly.

TYPICAL CONNECTOR CROSS-SECTION
(Clamp Type with Captivated Contact)



CABLE

Coaxial cable consists of two concentric conductors separated by a dielectric layer (insulating material). An outer covering, or jacket, protects the cable from physical environmental damage.

The cable center conductor can be a single solid wire or many thin strands twisted together. In flexible cables, the outer conductor, or shield is a layer of thin strands of braided wire between the dielectric and jacket. In semi-rigid cables, the outer conductor and jacket layer are combined into a thin sheath of copper or aluminum to which a termination is usually soldered.

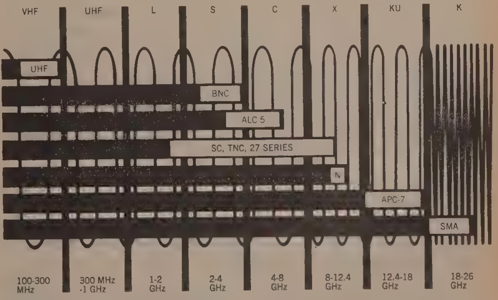
Each cable package is designed to carry a signal with predictable efficiency. Military nomenclature, such as RG-58/U, is usually used to identify one cable from another. Some cables are designated by their outer dimension such as .141″ diameter semi-rigid metal jacketed cable. Other special application cables are described by their manufacturer's part number.

The physical size of the cable and the signal carrying capacity required for your application are the first parameters to evaluate before an appropriate termination or interconnection can be selected.

CONNECTOR TYPE OR SERIES

The chart below shows the popular connector types or series categorized by the optimum frequency range across which the units were designed to operate. The chart is further subdivided into convenient band widths with associated designations assigned by the FCC. Generally, as the optimum frequency range of operation increases, so does the cost. Therefore, it is important to observe certain disciplines in the selection process to avoid burdening your product with the excessive costs of performance for which there will be no foreseeable demand.

CONNECTOR SELECTION GUIDE



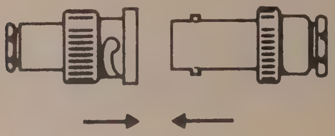
FOR LOCAL SOURCE OF SUPPLY SEE EEM VOL. 2 PAGE 462

RF CONNECTORS

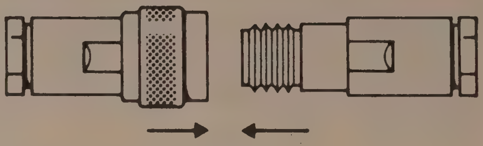
BUNKER RAMO AMPHENOL

COUPLING METHOD

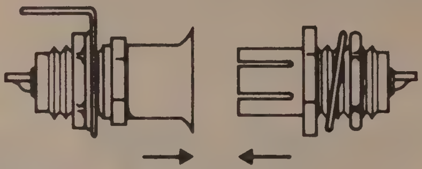
Connectors mate or couple to each other in three basic ways: twist-lock bayonet, screw threads and push-pull action.



BAYONET



THREADED



PUSH ON

Twist Lock. Bayonet coupling provides a push-twist-lock connection. The jacks and receptacles have two or three circular protrusions on the exterior of the body, referred to as bayonet ears or studs. The plugs have slanted slots on the coupling nut into which the studs slide and lock.

Threaded. Jacks and receptacles have external screw-threads on the body. Plugs have matching internal threads in the coupling nut.

Push-Pull. Called by several names, push-on, snap-on, and plug-in, this method simply pushes to mate and pulls to unmate. The connectors are held together by the pressure of a press fit, by spring fingers, or by a spring-loaded detent.

In some cases, a connector series has its own distinctive mating style. BNC, for instance, has twist-lock bayonet type coupling as opposed to the TNC series which is held together by means of screw threads. Where time is a factor, the BNC would be chosen. It is quick to couple and uncouple and very strong once joined. But, if your piece of equipment were to be subjected to excessive movement or vibration, the TNC would be a better choice to avoid any circuit noise that might be generated by the two-stud bayonet arrangement of the BNC. Other connector series offer a choice of coupling styles. For example, the new sub-miniature ALC-5 series offers a push-on version and a snap-on version for applications where a more secure mechanical joint is desirable.

CABLE RETENTION METHODS

Again, there are three basic methods of securing or attaching the cable to the connector: soldering, clamping and crimping.

Soldering. The relatively unsophisticated procedure of soldering the connector body directly to the braid of flexible cable can still be found in the UHF series. For semi-rigid metal jacketed cable, however, the solder-type cable retention method employed reflects appropriate state-of-the-art advances. Applying too much heat that might deform the cable dielectric is a real danger. Amphenol endeavors to minimize this problem by incorporating appropriate safeguards in its connector design and cable assembly instructions. With SMA solder-type connectors, the design is such that the dielectric is trimmed after the solder operation is completed.

Clamping. This method employs the braid clamp, the sealing gasket, (originally a flat rubber gasket but improved to a V-grooved gasket or chevron seal), a flat washer and the clamp nut. This is the part that gives the force needed to secure the cable to the connector.

The old style clamps sealed and clamped by compressing the flat gasket, giving a fairly adequate seal but cable retention, being dependent on a rubber gasket, was weak. In the improved clamp, the V gasket is split as the clamp nut is tightened to the peaked portion of the braid clamp. This gasket shearing gives a better moisture seal and provides strong metal-to-metal cable retention.

Crimping. The latest cable retention method is crimping. With this method the braid clamp, gasket, washer, and clamp nut are replaced by a ferrule clamp nut assembly or a ferrule that's an extension of the connector body. The cable dielectric and center conductor are inserted into the ferrule, which is then crimped to the cable braid by a special tool. The inner ferrule is brass but the outer ferrule is a soft copper alloy because it must be deformed.

The crimping assembly method is much easier to perform than clamping. Connectors are assembled uniformly from day to day and from worker to worker. Cable stripping dimensions are not as critical and braid combing isn't required. The problems of torque tightening, necessary to obtain satisfactory cable retention with the clamp method, are eliminated. While special tools are required, the repeatable performance crimped assemblies demonstrate and the speed with which the assembly operation can be performed (approximately one-tenth the time required for clamping techniques) is well worth the relatively small tool investment.

CABLE-TO-CONNECTOR ASSEMBLY

Assuming a connector is properly designed and manufactured to the required tolerances, the most important contributions to high VSWR are those variables associated with the assembly of the connector to the cable. The importance of this operation cannot be over-emphasized. Any air gap between the cable core and the connector insulator introduces an impedance discontinuity that can greatly increase the VSWR of the assembly. Similar effects are present when the connector contact is not butted against a square cut of the cable dielectric. In high voltage cable assemblies, air pockets reduce the peak voltage capability.

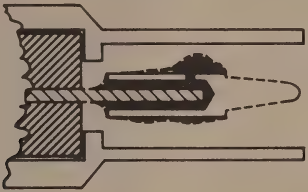
Precautions should be taken during assembly to be certain the center contact of the connector is at the proper lateral position. In most connectors, the lateral distance between a point on the connector shell and the pin is important to maintain an electrical match. Lateral misalignment is a common assembly problem resulting from assembling connectors to both ends of a relatively long cable while the cable is still coiled. When uncoiled, the ends of the center conductor assume a different position with respect to the ends of the outer braid. For similar reasons, a connector should not be assembled to cable exposed to temperature extremes.

When soldered center pins are used, two major problems occur; not enough solder inside the pin, or too much solder on the outside. The first lengthens the path of current in the center conductor and increases inductance. The latter enlarges the diameter of the center pin, increasing the connectors' shunt capacitance. Both affect high frequency performance by changing the connectors' impedance.

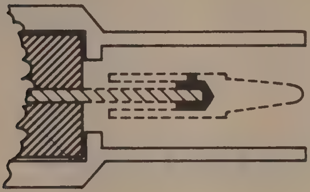
Small sized connectors are troubled most by this change in pin size. Since the thickness of an excess solder film is relatively constant, and the connectors' dimensions are reduced, the diameter ratio variation has a greater impact on the connectors' impedance. Subminiature connectors are particularly susceptible to this assembly problem. They are also sensitive to cable deformations. Off-centered coax, or cable with pinched dielectric, is often the cause of poor performance. These troubles start with the choice of assembly method.

Connector assembly methods vary widely among users. For many, it's the most costly step in making their product. Trading up in acquisition cost to an improved clamp or crimp connector that gives speedier assembly and fewer operations, can lower the actual total connector cost.

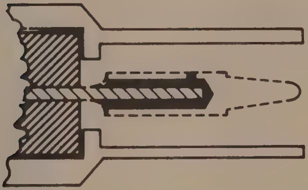
Wherever possible, the assembly operation should be automated to reduce variations caused by hand assembly. It's best to make up in-house operating procedures based on the connector manufacturer's assembly instructions. Cutting guides, the choice of thermal or knife-edge stripping of insulation, etc., should depend on the tooling at hand and the skill level of the operators. Greater care and planning at the assembly stations result in a more reliable and better performing connector.



A) Too much solder increases center conductor diameter, thus increasing shunt capacitance.



B) Too little solder increases the current path, thus increasing series inductance.



C) The proper amount of solder is needed to wring the maximum high frequency performance from a connector.

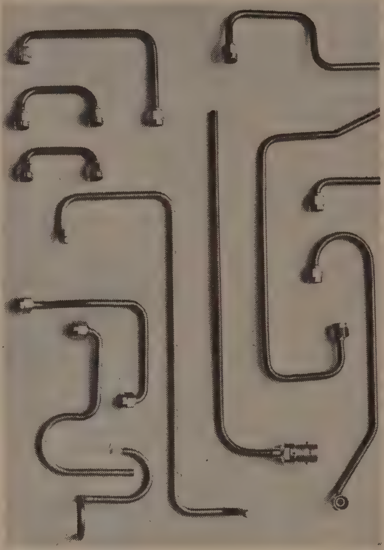
RF CONNECTORS

BUNKER RAMO AMPHENOL

CUSTOM CONTOURED CABLE ASSEMBLIES TERMINATED TO YOUR SPECIFICATIONS



Amphenol has recognized the rapidly growing need for engineered cable assemblies. Not connectors casually hung on the ends of a length of cable. But units that are capable of passing sophisticated mechanical and electrical tests. Engineered to do a specific job well. Manufactured and assembled under the kind of controlled conditions that assure repeatable performance.

Total capability. Total responsibility. Total accountability. One complete job in one plant for increased efficiency, closer coordination and better quality.

Every Amphenol cable assembly is precisely assembled and 100% tested mechanically and electrically by highly skilled personnel providing the ultimate in RF quality and reliability.

More important. Known total cost. No unexpected surprises. No hidden costs. No unplanned in-house burden rates. Call your nearest Amphenol sales engineer or the RF division for additional information.

OTHER PRODUCTS AND CAPABILITIES

Amphenol RF Division of The Bunker-Ramo Corporation manufactures components and sub-systems for the generation, transmission, reception and utilization of RF and microwave energy. Coaxial connectors, coaxial switches, and custom microwave components comprise our major areas of product activity.

Divisional general offices, manufacturing and assembly facilities occupy 140,000 square feet in Danbury, Connecticut.

This coordinated complex aided by a distribution and warehousing facility in Broadview, Illinois, permits a unique and often instantaneous reaction to the coaxial connector market's demands.

Our capability is further strengthened by automated high-speed manufacturing equipment in conjunction with a consistent uncompromising attitude toward quality.

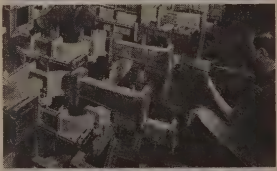
Not only is pin-point surveillance exercised at every phase of fabrication, but most sub-components are manufactured by Amphenol itself from raw stock. Even plastic dielectric insulators are produced by the RF Division in its own injection molders.

Procedures like these make for maximum design flexibility and fast delivery. They also give us positive control at every step, assuring that all sub-components are perfectly matched from electrical and mechanical standpoints.

Extensive facilities for the measurement and analysis of Amphenol connectors under all applicable environmental and electrical parameters, backed by built-in quality assurance controls at each step of fabrication, recommend the highest degree of confidence in the reliability of these components.

Broadband Capability
Amphenol RF Division capability is diverse and deep. It ranges from a fundamental RF component like coaxial connectors to development and production of advanced microwave devices. Whatever the product, the job or the service — all are unified by their common base in RF theory and practice.

Custom Microwave Components
For over a decade Amphenol RF Division has been one of the nation's largest producers of microwave hardware and apparatus for large commercial and military systems.



Coaxial Switches
Amphenol RF Division designs, manufactures and sells more coaxial switches than anyone else in the world. Whether complex phased array types or simple antenna switches, you can be sure of rugged design and precision performance. Scores of models in miniature, hermetically-sealed and multi-position designs are available.

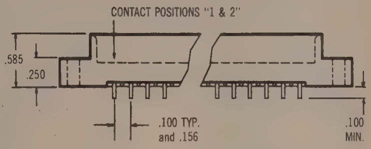
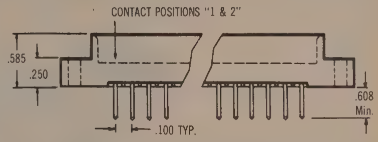
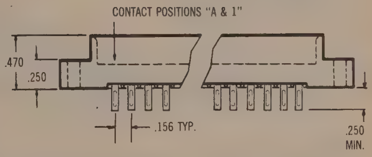
CONNECTORS

GOLD OR ULTRAPLATE P.C. BOARD, SOLDER EYE OR WIRE WRAP TERMINATIONS

- Glass filled polyester type SE-0 body.
- Contact spacing either .100 or .156.
- Standard number of contacts 15/30; 22/44; 36/72; 43/86; 50/100.
- **VOLTAGE RATING:** 600 VAC
- **CURRENT RATING:** .100 spacing 3 amps
  .156 spacing 5 amps
- **VOLTAGE DROP:** 30 millivolts @ rated current
- **TEMPERATURE RANGE:** −65°C to +125°C.
- Polarizing keys available
- Connectors accommodates standard .054" to .071" thick printed circuit boards.
- Features pre-loaded bifurcated contacts.
- Low insertion forces and high contact forces.
- Various mounting styles.







Competitive with:
Amphenol 225 Cinch 50; Burndy PSC
Elco 00; Viking 2VH, 3PN, Winchester 8BD, HKD, HW.

ULTRAPLATE:

Plating:

These connectors feature **"ULTRAPLATE"**, a totally new plating alloy and plating process specifically designed for wiping contacts that permit connector performance comparable to that of gold plated contacts. The contact resistance is less than 10 millivolts making it suitable for use in all non "Dry Circuit" applications.

FEATURES

- low contact resistance
- excellent corrosion resistance
- low insertion forces
- excellent solderability
- low cost

Arrow Hart WIRING DEVICES

We are pleased to present these ARROW-HART Wiring Devices. Incorporated in the data presented are the latest ARROW-HART products in accordance with Underwriters Laboratories, CSA, NEMA, and OSHA.

Most important consideration in the data presentation is the arrangement of product groupings to assure easy product selection.

SETTING THE PACE

ARROW-HART WIRING DEVICE FOR INDUSTRY

No one knows your tough OEM Wiring Device requirements better than ARROW-HART.

For many years the ARROW-HART name has made the highest quality available in Wiring Devices for industry. Industry requires products built to withstand tough abuse. ARROW-HART puts more into Wiring Devices so that you will be able to get more out. We offer products that are reliable and maintenance free once in use. They are easy to install.

The following pages include locking and non-locking receptacles, caps, connectors, inlets, and outlets that meet the 1975 National Electrical Code and NEMA Configuration requirements.

For medical equipment "Hospital Grade" Wiring Devices are shown which meet the latest Underwriters' Laboratories standards.

We put more in. You get more out.

ARROW-HART WIRING DEVICES ARE AVAILABLE AT A NATIONWIDE NETWORK OF AUTHORIZED ELECTRICAL DISTRIBUTORS

As near to you as your phone, Authorized ARROW-HART Distributors maintain in-depth inventories of our products, and are staffed and equipped to provide prompt, efficient service. ARROW-HART Distributors are businessmen whose major interest is the marketing of electrical supplies at the wholesale level. They are specialists in the ARROW-HART line of Wiring Devices as well as other electrical equipment you need. They fully understand your electrical problems and can recommend quality products to meet your requirements. The next time you need dependable product information, plus a reliable source of supply, you'll get them both with a single phone call to your nearest ARROW-HART Distributor. He's waiting to hear from you, and ready to help.

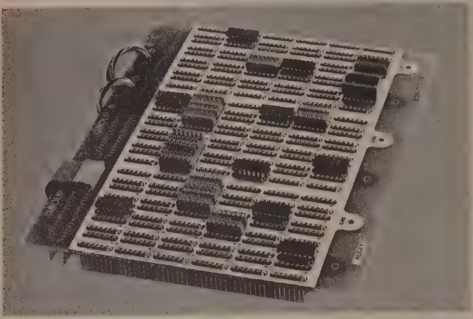
AUGAT® Panels



P-Series: • Accepts 14 and 16 lead dip I.C.'s • Plane mounted • Modular construction, multiple of 30 patterns (up to 180 patterns) • Each 30 pattern section accepts 3 interfacing plugs or two 26 position flat cable plug for I.O. connections.

OVERALL SIZE: (30 pattern section) approx.

$\frac{177.80 \pm 0.63\text{mm}}{7.000 \pm .025} \times \frac{67.94 \pm 0.63\text{mm}}{2.675 \pm .025}$

HOW TO ORDER: Socket/terminal options – for wrap length and plating, see table below.

*Part Number	Suffix Added to Number	Socket/Terminal Length	Plating: Gold Contact Gold Sleeve	Plating: Gold Contact Tin Sleeve
8136-PG1-30	None	12.95mm/.510in. (3 level)	X	
8136-PG1-30-TG	-TG	12.95mm/.510in. (3 level)		X
8136-PG1-30-2	-2	9.40mm/.370in. (2 level)	X	
8136-PG1-30-2TG	-2TG	9.40mm/.370in. (2 level)		X

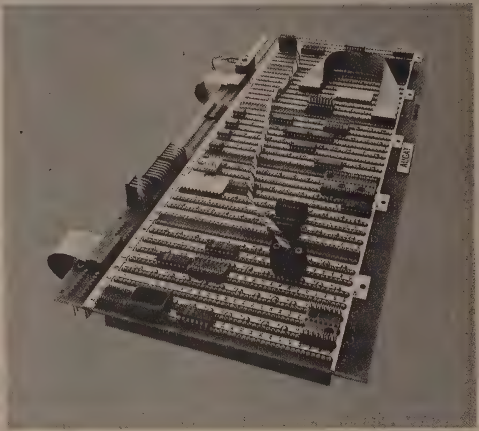
*May be purchased in any multiples of 30 patterns (up to 180 patterns) indicated by suffix number.

EXAMPLE: 8136-PG1-90 90 patterns.

Part Number *Series	Socket/Terminals Per Pattern	Voltage and Gnd. Connections	I.O. Termination
8136-PG1	14 .300″ x .100″ spacing	7 & 14 Socket/Terminal	Socket/Terminal
8136-PG18			Feed Thru
8136-PG3	14 + 2 (V & G) .300″ x .100″ spacing	V & G Dummy Terminal	Socket/Terminal
8136-PG122		V & G Socket/Terminal	Socket/Terminal
8136-PG19		V & G Dummy Terminal	Feed Thru
8136-PG113		V & G Socket/Terminal	Feed Thru
8136-PG5	16 .300″ x .100″ spacing	8 & 16 Socket/Terminal	Socket/Terminal
8136-PG20			Feed Thru
8136-PG13	16 + 2 (V & G) .300″ x .100″ spacing	V & G Dummy Terminal	Socket/Terminal
8136-PG29		V & G Socket/Terminal	Socket/Terminal
8136-PG21		V & G Dummy Terminal	Feed Thru
8136-PG51		V & G Socket/Terminal	Feed Thru

Materials: BOARD: ⅛″ glass epoxy, 2 oz. copper Circuitry, both sides tin plated

Socket/Terminal: TERMINAL: Brass, gold over nickel or tin plated. FEMALE CONTACT: Beryllium copper, gold over nickel plated.



U-Series: • Accepts any combination of 14 thru 40 lead dip I.C.'s • Multiple of nine rows up to 54 rows • Each 9 row section accepts 3 interfacing plugs or two 26 position flat cable plugs for I.O. connections.

OVERALL SIZE: (9 row section)

$\frac{174.62 \pm 0.63\text{mm}}{6.875 \pm .025} \times \frac{67.94 \pm 0.63\text{mm}}{2.675 \pm .025}$

HOW TO ORDER: Socket/terminal options – for wrap length and plating, see table below.

*Part Number	Suffix Added to Number	Socket/Terminal Length	Plating: Gold Contact Gold Sleeve	Plating: Gold Contact Tin Sleeve
8136-UG1-18	None	12.95mm/.510in. (3 level)	X	
8136-UG1-18-TG	-TG	12.95mm/.510in. (3 level)		X
8136-UG1-18-2	-2	9.40mm/.370in. (2 level)	X	
8136-UG1-18-2TG	-2TG	9.40mm/.370in. (2 level)		X

*May be purchased in any multiple of 9 rows (up to 54 rows) indicated by suffix number.

EXAMPLE: 8136-UGI-27 27 rows

NOTE: Rows are .300″ on center.

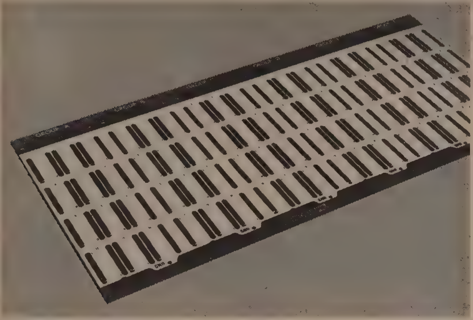
Part Number *Series	Voltage and Gnd. Connections	I.O. Termination
8136-UG1	Dummy Terminal	Socket/Terminal
8136-UG56	Socket/Terminal	
8136-UG6	Dummy Terminal	Feed Thru
8136-UG61	Socket/Terminal	

Materials: BOARD: ⅛″ glass epoxy, 2 oz. copper Circuitry, both sides tin plated.

Socket/Terminal: TERMINAL: Brass, gold over nickel or tin plated. FEMALE CONTACT: Beryllium copper, gold over nickel plated.

Augat Inc., 33 Perry Avenue, Attleboro, Massachusetts 02703 / 617-222-2202. Note: Request Augat Catalog No. 266

AUGAT® Panels



LSI Series: • Accepts 24 lead dip I.C.'s • Plane mounted • Modular construction, multiple of 12 patterns (up to 72 patterns) • Each 12 pattern section accepts 3 interfacing plugs or two 26 position flat cable plugs for I.O. connections.

OVERALL SIZE: (12 pattern section)

189.9 ± 0.63mm / 7.475 ± .025 × 67.94 ± 0.63mm / 2.675 ± .025

HOW TO ORDER: Socket/terminal options – for wrap length and plating, see table below.

*Part Number	Suffix Added to Number	Socket/Terminal Length	Plating: Gold Contact Gold Sleeve	Plating: Gold Contact Tin Sleeve
8136-PG142-72	None	12.95mm/.510in. (3 level)	X	
8136-PG142-72-TG	-TG	12.95mm/.510in. (3 level)		X
8136-PG142-72-2	-2	9.40mm/.370in. (2 level)	X	
8136-PG142-72-2TG	-2TG	9.40mm/.370in. (2 level)		X

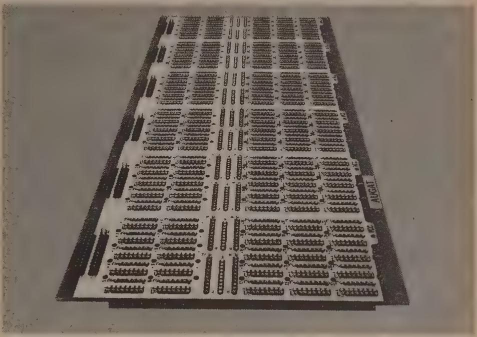
*May be purchased in any multiple of 12 patterns (up to 72 patterns) indicated by suffix number.

Example: 8136-PG142-24 24 patterns

Part Number *Series	Socket/Terminals Per Pattern	Voltage and Gnd. Connections	I.O. Termination
8136-PG142	24 .600" x .100" spacing	12 & 24	Socket/ Terminal
8136-PG173			Feed Thru

Materials: BOARD: ⅛" glass epoxy, 2 oz. copper circuitry, both sides tin plated.

Socket/Terminal: TERMINAL: Brass, gold over nickel or tin plated FEMALE CONTACT: Beryllium copper, gold over nickel plated.



E.C.L. Logic: Accepts 16 lead dip E.C.L. 10K logic • Vcc, Vee and Vtt planes • Modular construction, multiple of 30 patterns (up to 180 patterns) • Provisions for line terminating resistors and decoupling capacitors • Panels also available for Schottky logic.

OVERALL SIZE: (30 pattern section)

189.9 ± 0.635mm / 7.475 ± .025 × 67.94 ± 0.635mm / 2.675 ± .025

HOW TO ORDER: Plating Options – See table below.

*Part Number	Suffix Added to Number	Socket/Terminal Length	Plating: Gold Contact Gold Sleeve	Plating: Gold Contact Gold Sleeve
8136-ECL1-60-2	None	9.40mm/.370in. (2 level)	X	
8136-ECL1-60-2TG	-2TG	9.40mm/.370in. (2 level)		X

*ECL1 and ECL6 Series may be purchased in any multiple of 30 patterns (up to 180 patterns) indicated by suffix number.

EXAMPLE: 8136-ECL1-60-2 60 patterns

*ECL5 may be purchased in any multiple of 27 patterns (up to 162 patterns).

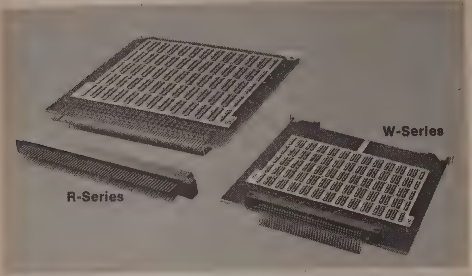
Part Number *Series	Socket/Terminals Per Pattern	Voltage and Gnd. Connections	I.O. Termination
8136-ECL1 8136-ECL6	16 .300" x .100" spacing	(Vcc) 1 + 16 (Vee) 8	Feed Thru
8136-ECL5	16 and 24 300" x .100" spacing	(Vcc) 1 + 16 (Vee) 8 (Vcc) 1 + 24 (Vee) 12	Feed Thru

Materials: BOARD: ⅛" glass epoxy, 2 oz. copper circuitry (3 layers) tin plated.

Socket/Terminal: TERMINAL: Brass, gold over nickel or tin plated FEMALE CONTACT: Beryllium copper, gold over nickel plated.

Augat Inc., 33 Perry Avenue, Attleboro, Massachusetts 02703 / 617-222-2202. Note: Request Augat Catalog No. 266

AUGAT® Panels



R-Series: • Accepts 14 and 16 lead dip I.C.'s • 60 patterns standard • Edge connector take-off (60 dual contact, 120 termination) ⅛ inch or 1/16 inch panel thickness • Universal style.

OVERALL SIZE: 186.86 ± 0.38mm / 7.353 ± .015 × 177.80 ± 0.38mm / 7.000 ± .015

HOW TO ORDER: Socket/terminal options – for wrap length and plating, see table below.

*Part Number	Suffix Added to Number	Socket/Terminal Length	Plating: Gold Contact Gold Sleeve	Plating: Gold Contact Tin Sleeve
8136-RG1	None	12.95mm/.510in. (3 level)	X

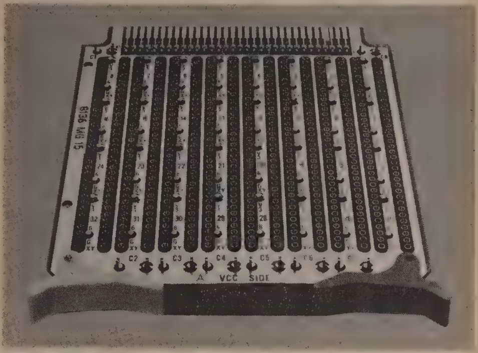
8136-MG10			V + G socket/terminal
8136-MG11	16 .300″ x .100″ spacing		8 + 16 socket/terminal
8136-MG12			V + G socket/terminal
8136-MG13	Extender card		
8136-MG14	Blank card		

Part no. 8136-UMG1 (Universale style) 12 rows of 35 contacts on .300″ centers.

Materials: BOARD: 1/16″ Glass epoxy, 2 oz. copper circuitry both sides tin plated. Connector fingers – gold over nickel plated.

Socket/Terminal: TERMINAL: Brass, gold over nickel or tin plated.
FEMALE CONTACT: Beryllium copper, gold over nickel plated.
EJECTOR KEYS: Nylon
I.O. PINS: Phosphor bronze gold over (2 rows of 36) nickel plated.



High Density Socket Panels: • Accepts 14, 16 and 18 lead dips I.C.'s • Additional slotted pins for mounting discrete components • Edge connector take off • UMG3-V + G connections are preselected in each I.C. row, MG15-V + G connections located outside of I.C. row.

OVERALL SIZE: $\frac{111.12 \pm 0.38\text{mm}}{4.375 \ \pm .015} \times \frac{123.49 \pm 0.38\text{mm}}{4.862 \ \pm .015}$

HOW TO ORDER: Socket/terminal options – for wrap length and plating, see table below.

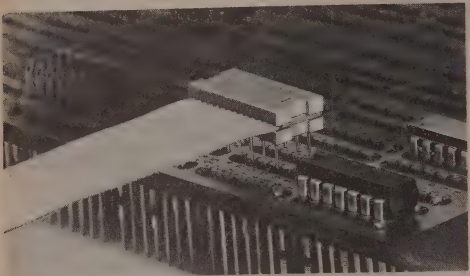
8136-UMG3	10 on .300″ x .100″ spacing	35	

Materials: BOARD: 1/16″ Glass epoxy, 2 oz. copper circuitry both sides tin plated. Connector pads – gold over nickel plated.

Socket/Terminal: TERMINAL: Brass, gold over nickel or tin plated.
FEMALE CONTACT: Beryllium copper, gold over nickel plated.
EJECTOR KEY: Nylon
I.O. PINS: Phosphor bronze gold over nickel plated. (2 rows of 27)

Augat Inc., 33 Perry Avenue, Attleboro, Massachusetts 02703 / 617-222-2202. Note: Request Augat Catalog No. 266

AUGAT® Panel Accessories



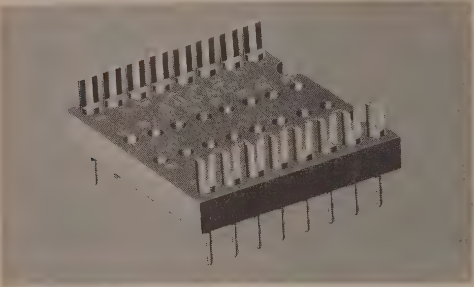
Flat Cable Plug Assemblies: • Plugs directly into I.C. patterns • Unique contact design eliminates cutting and stripping of cable • 14 and 16 pin terminator • Cable is stranded copper wire, P.V.C. insulated.

Part Number	No. of Pins	Cable Length
2P14-1R12-1	14	12 in.
2P14-1R24-1	14	24 in.
2P14-1R36-1	14	36 in.

.300″ x .100″ Pin Spacing

For double ended assemblies, replace -1 suffix with -2.
EXAMPLE: 2P14-1R12 -2

For 16 pin assemblies, replace 14 with 16
EXAMPLE: 2P16

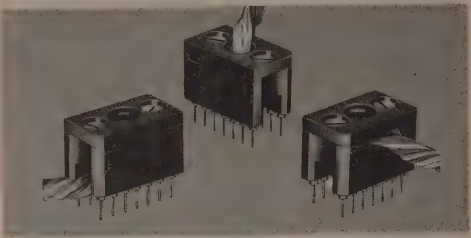


Adaptor Plugs: • 14 thru 40 pin with round, solder pocket or slotted connection • same dimension as I.C. pattern.

Standard Type			
Part Number*	**No. of Pins**	**Pin Spacing**	**Pin Style**
614-AG1	14	.300″ x .100″	Round
616-AG1	16		
628-AG1	28	two .300″ x .100″	
632-AG1	32		
614-AG2	14	.800″ x .100″	
616-AG2	16		

*Substitute correct letter in part number for pin style variations (A – Round, B – Solder Pocket, C – Slotted).
EXAMPLE: (Solder Pocket Style) 614-BG1

Universal Type			
Part Number*	**No. of Pins**	**Pin Spacing**	**Pin Style**
614-AG3	14	.600″ x .100″	Round
616-AG3	16		
624-AG1	24		
628-AG2	28		
636-AG1	36		
640-AG1	40		



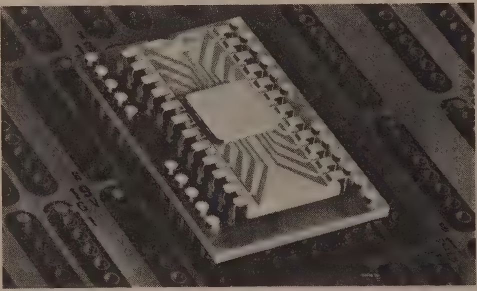
Interfacing Plug Assemblies: • For I.O. connections, interfacing and testing • Same dimensions as I.C. pattern • 14 and 16 pin • Top, side or bottom entry of wires • Stranded wire; Teflon insulated • Pat. No. 3506945.

Part Number	No. of Pins	Pin Dia.	Wire Length
1P14-3T12-1	14	.018	12 in.
1P14-3T24-1			24 in.
1P14-3T36-1			36 in.
1P14-4T12-1	14	.023	12 in.
1P14-4T24-1			24 in.
1P14-4T36-1			36 in.

.300″ x .100″ pin spacing

For double ended assemblies, replace -1 suffix with -2.
EXAMPLE: 1P14-3T12 -2

For 16 pin assemblies, replace 14 and 16
EXAMPLE: 1P16



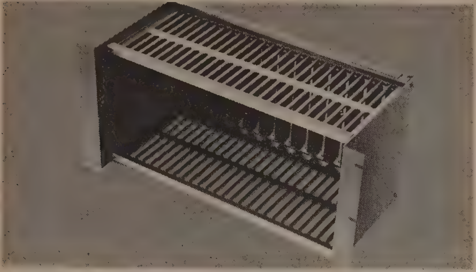
L.S.I. Adaptor Plug: • Accepts up to 40 lead L.S.I. dip I.C.'s • Interposing L.S.I. circuits on 14 and 16 pattern Augat panels • Dips are soldered into adaptor which plugs into panel • Adaptor pins are located to prevent improper positioning on panel.

Part Number	Application
628-HG16	Up to 28 pins .600″ x .100″ spacing
640-HG16	Up to 40 pins .600″ x .100″ spacing

Materials: BOARD: 1⁄16″ glass epoxy, electro tin plated.
PIN: Phosphor bronze, gold over nickel plated.

Augat Inc., 33 Perry Avenue, Attleboro, Massachusetts 02703 / 617-222-2202. Note: Request Augat Catalog No. 266

AUGAT® Rack Assemblies



R-Series Rack Assembly: • Mounts up to 13 R or UR type panels • Designed for 19″ relay rack mounting • Back panel removable for automatic wire wrapping • Provisions for mounting additional panels or P.C. boards on .600″ spacing • Enclosure available.

OVERALL SIZE:

Enclosure

431.80 ± 0.76mm / 17.000 ± .030 × 463.55 ± 0.76mm / 18.250 ± .030 × 222.25 ± 0.76mm / 8.750 ± .030

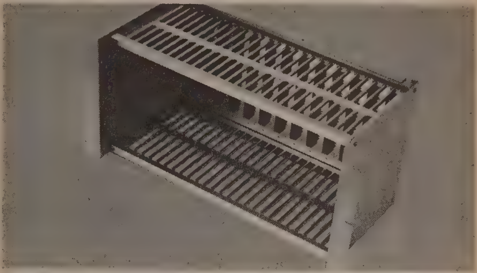
Rack

482.60 ± 0.76mm / 19.000 ± .030 × 215.90 ± 0.76mm / 8.500 ± .030 × 220.64 ± 0.76mm / 8.687 ± .030

Part Number	Accepts Panel Thk.	Description
8170-EG1	⅛″ or 1⁄16″	Enclosure Only
8160-EG10	⅛″	Back Panel Only (with 13 connectors)
8160-EG21	1⁄16″	
8170-RG1	⅛″	Panel Rack with back panel and mounting ears on side plates.
8170-RG14	1⁄16″	
8170-RG3	⅛″	Same as RG1 or RG14, except without back panel.
8170-RG16	1⁄16″	
8170-RG2	⅛″	Panel Rack with back panel and side plates for enclosure mounting.
8170-RG15	1⁄16″	
8170-RG4	⅛″	Same as RG2 or RG15 except without back panel.
8170-RG17	1⁄16″	

NOTE: Connector Only – Part No. 14005-1P1 (⅛″) 14005-19P1 (1⁄16″) (120 contact – 60 dual row).

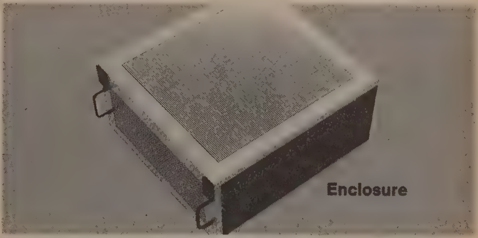
Materials: (R&W Back and Enclosure)
ENCLOSURE – Aluminum, painted blue
RACK – End plate – aluminum, gold iridite
(R&W) Guide plate – steel, cad.-plate, gold iridite
BACK PANEL – Glass epoxy
SOLDER LUGS – Brass, tin plated

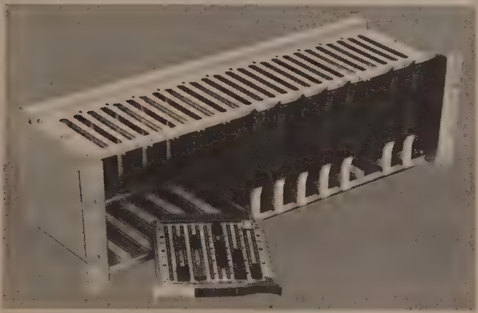


W-Series Rack Assembly: • Same design features as R-Series rack except back panel has pin and socket type connectors.

Part Number	Accepts Panel Thk.	Description
8170-EG1	⅛″ or 1⁄16″	Enclosure Only
8160-WG1	⅛″	Back Panel Only (with 13 connectors)
8160-WG3	1⁄16″	
8170-RG6	⅛″	Panel Rack with back panel and side plates for enclosure mounting.
8170-RG18	1⁄16″	
8170-RG4	⅛″	Same as RG6 or RG18 except without back panel.
8170-RG17	1⁄16″	
8170-RG7	⅛″	Panel Rack with back panel and mounting ears on side plates.
8170-RG19	1⁄16″	
8170-RG3	⅛″	Same as RG7 or RG19 except without back panel.
8170-RG16	1⁄16″	

NOTE: Connector Only – Part No. 14005-13P1 (Male)
(⅛ or 1⁄16) 14005-14P1 (Female)
120 Contact (3 rows of 40)





M-Series Rack Assembly: • Accepts up to 13 M-series Logic Panels • Provision for mounting additional panels or P.C. boards on .600″ center • Removable back panel for automatic wire wrapping. Designed for 19″ relay rack mounting.

OVERALL SIZE:

482.60 ± 0.76mm / 19.000 ± .030 × 152.40 ± 0.76mm / 6.000 ± .030 × 127.79 ± 0.76mm / 5.110 ± .030

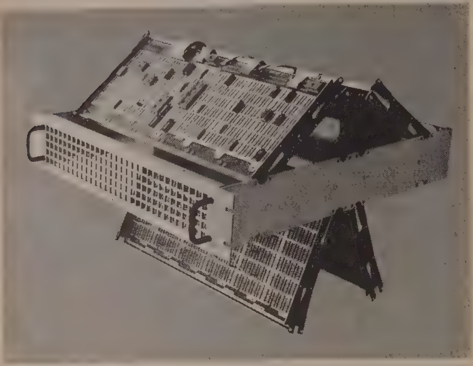
Part Number	Description
8160-EG20	Back Panel Only (with 13 connectors)
8170-MG1	Panel Rack with back panel and mounting ears on side plates.

NOTE: Connector Only – Part No. 14005-17P3 (1⁄16″ only) (72 Contact – 36 dual row)

Materials: RACK – Aluminum, gold iridite.
GUIDES – Nylon.
BACK PANEL – 1⁄16″ glass epoxy.
SOLDER LUGS – Brass, tin plated.

Augat Inc., 33 Perry Avenue, Attleboro, Massachusetts 02703 / 617-222-2202. Note: Request Augat Catalog No. 266

AUGAT® Drawers Sockets



Full Drawer Assembly: • Accepts up to four plane mount panels, up to 720 dip I.C.'s • Frames are hinged either side for accessibility and easy removal • Dust covers furnished • Designed for 19" rack mounting • Optional perforated or solid end plates.

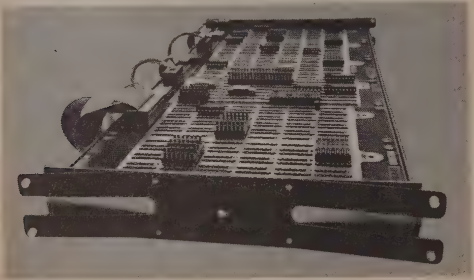
OVERALL SIZE:

$$\frac{482.60 \pm 0.38\text{mm}}{19.000 \pm .015} \times \frac{518.79 \pm 0.76\text{mm}}{20.425 \pm .030} \times \frac{88.90 \pm 0.76\text{mm}}{3.500 \pm .030}$$

Part Number	Description
8170-DG1	Drawer assembly with fan cutout rear plate and perforated front plate. (Accepts 4 panel frames)
8170-DG2	Drawer assembly with rear blank plate and front blank plate. (Accepts 4 panel frames)

NOTE: Order panel frames separately.

Materials: (Full drawer & half drawer)
All Frame members are aluminum, gold iridite, Front plate is painted blue.



Panel Frames: • Hinged at both ends with spring latch permitting accessibility and removal. Mounts full 180 pattern panel or a combination of panel styles up to 180 patterns. (16.175 ± .025) 410.84 ± 0.63mm.

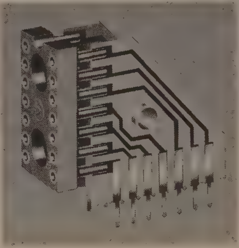
Part No. 8170-14G1 accepts the following panel series:

8136 – PG1	8136 – PG113
PG18	PG5
PG3	PG20
PG122	8136 – UG1
PG19	UG56
	UG6
	UG61

Part No. 8170-14G2 accepts the following panel series:

8136 – PG13	8136 – PG21
PG29	PG51

45°, 60° and 90° L.E.D. Numeric Display Socket
(.300" between rows)



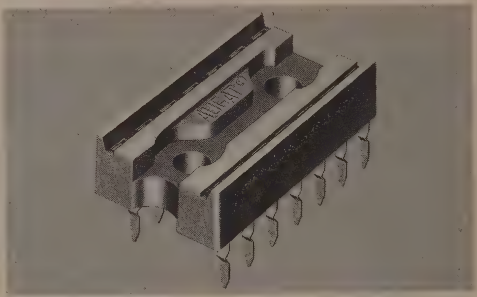
Material: SOCKET – Glass filled nylon

Socket/Terminal: CONTACT – Beryllium Copper, gold over nickel plated
SLEEVE – Brass, tin plated

P.C. Board/Terminal Assembly:
BOARD – Glass epoxy, tin plated copper circuitry
TERMINAL – Phosphor bronze, solder coated
SPACER – Delrin

Part Number	No of Contacts	Angle of Socket
514-AG21D	14	90°
514-AG25D		45°
514-AG26D		60°
516-AG21D	16	90°
516-AG25D		45°
516-AG26D		60°

NEW LOW PROFILE DIP SOCKET (.300" between rows)



- Low cost.
- Low profile – .160 (4.06mm) above PC board (I.C. Seating Plane)
- Continuous X & Y .100 (2.54mm) grid spacing.
- P.C. tail retains the socket in 1/16 (1.58mm) board during wave soldering.
- Designed for automatic board insertion.
- .020 (.508mm) between insulator and P.C. board for cleaning and proper clearance.
- Recommended mounting hole .035 ± .002 (.889 ± .050mm) dia.
- U.L. rated, SE-O glass filled thermoplastic.
- Gold or tin plated contacts.

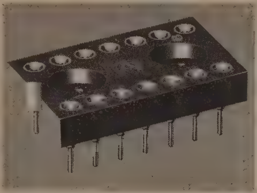
Part Number	No of Contacts	Contact Plating	Termination
314-AG25D	14	Tin over Copper	Printed Circuit
314-AG26D		Gold over Nickel	
316-AG25D	16	Tin over Copper	
316-AG26D		Gold over Nickel	

Material: INSULATOR – Glass filled Thermoplastic
CONTACT – Beryllium Copper, gold over nickel or tin over copper plated (see part block)

Augat Inc., 33 Perry Avenue, Attleboro, Massachusetts 02703 / 617-222-2202. Note: Request Augat Catalog No. 266

AUGAT® Sockets

8, 14, 16, 18 (.300″ between rows) and 22 Contact (.400″ between rows)



Ultra Low Profile – Precision Machined Contact

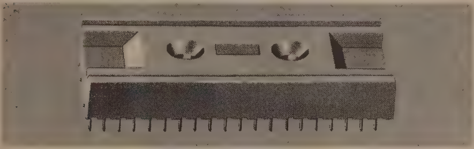
- Two piece socket terminal. Machined inner contact – beryllium copper, gold plated. Machined outer sleeve – brass, gold or tin plated.

Part Number	No. of Contacts	Contact Plating	Sleeve Plating	Termination
508-AG1D	8	Gold	Gold	Printed Circuit
508-AG11D		Gold	Tin	
508-AG1F		Gold	Gold	Wire Wrap
508-AG11F		Gold	Tin	
514-AG10D	14	Gold	Gold	Printed Circuit
514-AG11D		Gold	Tin	
514-AG10F		Gold	Gold	Wire Wrap
514-AG11F		Gold	Tin	
516-AG10D	16	Gold	Gold	Printed Circuit
516-AG11D		Gold	Tin	
516-AG10F		Gold	Gold	Wire Wrap
516-AG11F		Gold	Tin	
518-AG1D	18	Gold	Gold	Printed Circuit
518-AG11D		Gold	Tin	
518-AG1F		Gold	Gold	Wire Wrap
518-AG11F		Gold	Tin	
522-AG10D	22	Gold	Gold	Printed Circuit
522-AG11D		Gold	Tin	
522-AG10F		Gold	Gold	Wire Wrap
522-AG11F		Gold	Tin	

Material: INSULATOR – Glass filled nylon

Socket/Terminal: CONTACT – Beryllium copper, gold over nickel plated
SLEEVE – Brass, gold over nickel or tin plated (see part block)

24, 36 and 40 Contact LSI Sockets (.600″ between rows)



- Available in printed circuit, solder pocket or wire wrap termination.

Part Number	No. of Contacts	Termination
324-AG2A	24	Solder Pocket
324-AG2D		Printed Circuit
324-AG2F		Wire Wrap
336-AG2A	36	Solder Pocket
336-AG2D		Printed Circuit
336-AG2F		Wire Wrap
340-AG5A	40	Solder Pocket
340-AG5D		Printed Circuit
340-AG5F		Wire Wrap

Materials: INSULATOR – (24+36 Contact) Diallyl Phthalate (40 Contact) Glass filled polyester

CONTACT – (wire wrap) Phosphor Bronze, gold over nickel plated (printed circuit & solder pocket) Beryllium copper, gold over nickel plated

24, 28, 36 and 40 Contact, Low Profile LSI Sockets (.600″ between rows)
